REPORT

ON THE

ADMINISTRATION OF THE N.-W. P. AND OUDH,

FOR

1895-96.

GENERAL SUMMARY.

ADMINISTRATION.

The office of Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh was held by the Hon'ble Mr. Alan Cadell, C.S.I., until the 5th November 1895. The Hon'ble Sir Antony Patrick MacDonnell, K.C.S.I., administered the Provinces as Lieutenant-Governor and Chief Commissioner from 6th November to the end of the year.

THE YEAR.

The rainfall in the autumn of 1894 was heavy and prolonged, and was generally in excess during the winter months, the average for the year being 20 inches above that of the previous five years. This incessant rain caused serious injury to the autumn harvests generally, and the outturn in the greater part of the Provinces was exceptionally poor. The sowings of the spring crops were retarded by excessive moisture: in many cases they had to be repeated: and finally rust, blight, and high winds shrivelled the grain when ripening and reduced the produce. Except in the Meerut and Agra Divisions, where the outturn was on the whole not unsatisfactory, the year was one of bad harvests and agricultural depression. Serious injury was also caused by floods to crops and both private and Government property, and relief had to be afforded by remissions and suspensions of revenue.

The monsoon began in June about the usual time, and the rainfall was in that month abundant everywhere, and especially so in the central and western divisions of the Provinces. July was, however, drier than usual, the rain being confined to the first and last weeks of that month. In August the fall was nearly equal to the average in amount and well distributed; but in September practically little or no rain fell after the middle of the month. The eastern districts, however, received heavy rain during the advance of a cyclonic storm in the third week of September. The total rainfall for the rainy season was deficient in all divisions except Fyzabad, which showed a 10 per cent. excess, and Meerut, which had a 20 per cent. excess. The remaining three months of 1895 were almost entirely rainless, November on the plains being completely so. In the first three months of 1896 there was no rain in the plains except a few scattered showers, falling far short of the normal amount.

Harvest of 1894-95.

The year 1895.

Scarcity in the Bundelbhand districts, and in a few other districts of the Provinces.

The unsatisfactory character of the rainfall of 1895 resulted in varying degrees of pressure on the agricultural population of the Provinces. Relief operations, however, only became necessary in the four districts of Bánda, Hamírpur, Jalaun, and Jhánsi, known as British Bundelkhand (where the effects of the short rainfall in September, and the total absence of winter rains were especially marked); and in parts of the Allahabad, Hardoi, Pilibhit, Garhwal, and Almora districts. But it was only in Bundelkhand that relief measures on an extensive scale were undertaken: the operations in the other districts named were both in extent and character of minor importance. The Lieutenant-Governor visited Bundelkhand in the beginning of 1896, and it became manifest to him that the districts were about to pass through a period of distress. The affected area was fortunately well served by railways, and it was from the first apparent that private trade would be capable of supplying all the food . required, and that no heavier burden would fall on the Government than attached to the provision of relief works and of those measures of charitable or gratuitous assistance described in the Famine Code. All preparatory steps were accordingly taken to deal with distress when it should show itself. The number of applicants for employment on the test works opened soon became so considerable that, on the last day of February 1896, the Government ordered the conversion of these works into regular relief works under the Famine Code. In view of the growing magnitude of the scarcity, the Lieutenant-Governor again visited Bundelkhand towards the close of the year and held a Conference at Jhansi on the 11th and 12th March 1896, to discuss questions connected with famine relief. It was laid down that the object of Government in its famine relief policy would be (subject to the dominating idea of preventing starvation) first, to secure that expenditure on famine relief should be of permanent benefit to the several districts and help towards their commercial development and agricultural security; secondly, so far as possible, to keep people employed near their homes and to prevent the disintegration of villages. Up to the date of the Conference relief works of all kinds had been under the control of the District Officers; but the increasing pressure rendered a continuance of this arrangement undesirable, and it was accordingly arranged that, from 1st April 1896, all large works should be carried out by the Public Works Department in accordance with the rules laid down in Chapter VI of the Famine Code; while minor works were to continue under the control of the District Officers, who should work through the local landowners. The end of March may thus be taken as the period at which the relief operations assumed their settled character, large operations, such as roads, being thenceforth in charge of the Public Works Department, and minor works, such as village tanks, reservoirs, &c., carried out by local agency controlled by Up to 31st March 1896 the actual expenditure District Officers. incurred was Rs. 1,43,400.

Fublic health.

Although the excessive rainfall and deficient harvests were detrimental to public health, the year was on the whole less unhealthy than the preceding one. There was a diminution in the mortality from cholera, small-pox, and fever. Measures have been taken for combating the heavy

mortality from malarial fever by the sale of quinine in five grain packets at all post-offices; but it remains to be seen how far quinine has been brought within the reach of the mass of the population, and whether the boon has been appreciated by them.

While the mortality among cattle was less than in the previous year, still it was very great. Rinderpest, foot-and-mouth disease, and dysentery were very rife. The loss of cattle was greatest in a part of Oudh, one district alone having lost over 100,000 head of cattle. Active measures were taken for stamping out cattle-disease, but the people are generally apathetic in this matter, although they are said not to object to the treatment of their animals so long as they are put to no expense for medicines. Liberal advances were made in places where the loss of cattle was heaviest to enable cultivators to replace their stock.

Cattle-disease.

As was to be expected, the prices of food-grains ruled high owing to deficient harvests. In places where the local produce was insufficient, large importations from the Punjáb, and from those districts in the North Western Provinces which secured good harvests, helped to keep the prices from reaching famine level.

Prices.

There was an increase in the trade with the foreign countries of Tibet and Nepál, the total imports and exports being of the value of Rs. 1,00,93,546 as compared with Rs. 1,00,62,068 in the previous year. Both as regards weight and value there has been an improvement in the volume of the foreign trade.

Trade.

The total value of the rail-borne traffic shows a falling off from Rs. 35,68,77,855 in 1894-95 to Rs. 33,96,93,381 in the year under review. The decrease is attributed principally to the fact that in the Punjáb the crops were not plentiful in 1895-96, and that the imports were consequently on a much smaller scale than in 1894-95, when food-grains had to be largely imported to make up the home supply, which was insufficient for local consumption on account of the indifferent harvests of 1893 and 1894. The exports also declined sensibly, and this was due to agricultural depression and to the small yield of wheat and other food-grains owing to excessive moisture, blight, and other causes.

Posts for the registration of traffic by road and river were maintained during the year in the Rohilkhand Division and in the Meerut and Naini Tal districts. There was an increase generally in the import and export trade carried by road within the Provinces which may be attributed to the movement of grain on an extensive scale to districts where supplies were deficient.

LEGISLATION AND THE LEGISLATIVE AUTHORITY.

The Legislative Council met twice during the year.

• Three measures were dealt with, and all were under consideration at the close of the year.

Legislative Council. Legislation.

NATIVE STATES AND POLITICAL.

Nawab of Rampur.

The administration of the Rampur State was carried on, as in the previous year, by the Nawáb, assisted by an Executive Council of three members. The annual report of the State, which is separately published, contains a clear and full account of the administration, and shows that the various departments have received that individual attention from the officers in charge of them necessary to guarantee that progress has been made towards the well-being of the State, both in the interest of the Nawab and his subjects. The opening of the railway, which brings the town of Rampur within easy access of the British districts of Bareilly and Moradabad, has benefited the State greatly. The income of the year was Rs. 31,73,889 and the expenditure Rs. 26,27,644. The balance in the current treasury on 30th September 1895 was over a crore of rupees, including gold-mohurs. The most noticeable features in the. year's administration have been the completion of the weir over the Behalla Canal, which irrigates an area of 118,633 acres; the greater attention that has been paid to sanitation; the prompt disposal of criminal and civil business in the courts; and the continued popularity of the medical institutions, which are conducted on the English system.

Raja of Tehri.

The Raja of Tehri takes a great interest in the administration of the affairs of his State, and the readiness with which he has accepted the suggestions made to him from time to time in regard to the extension of public works and the administration of the forests merit approval. The income of the State was Rs. 2,47,062 in the year under review, and the expenditure Rs. 2,40,490. The finances are in a satisfactory condition, there being some $7\frac{1}{2}$ lakks of rupees lying at the credit of the State, of which five lakks are invested in Government promissory notes.

Relations with Thibet. An account of certain difficulties which occurred on the Thibetan frontier of the Almora district will be found in Part II, Chapter I of the report.

FINANCE.

The year 1895-96 was the last year but one of the current provincial contract.

When the budget was framed it was estimated that the provincial income would amount to $325\frac{1}{2}$ lakes of rupees, and the expenditure to $337\frac{1}{2}$, leaving a deficit of 12 lakes to be met by drawing on the provincial balances.

The year was, like its predecessor, an unfortunate one for provincial finance, the actual receipts amounting only to $316\frac{1}{2}$ lakhs, the lowest amount realized in any year in which the present contract has been in force. The falling off in receipts was owing chiefly to the effects of the season on the operations of the Irrigation Department. The cold weather of 1894-95 was exceptionally wet, and the demand for water for irrigation was less than in any previous year. The area irrigated during that season, the charges for which were realized in the financial year 1895-96, was only 151,548 acres as compared with an annual average of over a million acres in the years 1886-87 to 1893-94. The irrigation revenue fell by Rs. 9,53,000 below the budget estimate, and was less by

Rs. 19,54,000 than in the previous year. There was also, in addition to minor decreases under other heads, a falling off of Rs. 63,000 under "Excise" as compared with the receipts in 1894-95 under that head, due chiefly to the distress caused by adverse agricultural conditions and to the enhanced price of opium, which had the effect of reducing the gain on sales of excise opium.

The actual expenditure of the year, which amounted to $330\frac{1}{2}$ lakhs, was less by seven lakhs than the estimate, and less by about four lakhs than the expenditure of the previous year. The decrease was owing chiefly to the large retrenchments made by the Government, especially in the allotment for Public Works, in order to meet the anticipated deficit in the receipts. The rise in the rate of exchange at the same time lowered the charges for exchange compensation allowance, and allowed of savings in establishment budgets.

The receipts of Incorporated Local Funds (exclusive of the provincial contribution) were estimated at Rs. 84,83,000; but the actuals, owing chiefly to an improvement in the collection of Local Rates, amounted to Rs. 85,46,000. The expenditure, which had been estimated at Rs. 1,09,60,000, amounted to Rs. 1,06,73,000, the difference being partly owing to savings in the charges met from the Patwari Fund, and partly to the postponement of local Public Works. The balance at credit of the Local Funds, which chiefly belongs to the Patwari Fund, stood at Rs. 9,05,000, as against Rs. 8,20,000, the estimated closing balance of the year.

The general financial results of the year are shown in the following statement:—

		Provincial.	Local.	Total.
		Rs.	${f Rs.}$	Rs.
Opening balance		30,45,000	10,68,000	41,13,000
Receipts	•••	3,16,64,000	1,05,10,000	4,21,74,000
	Total	3,47,09,000	1,15,78,000	4,62,87,000
Expenditure	•••	3,30,62,000	1,06,73,000	4,37,35,000
Closing balance	•••	16,47,000	9,05,000	25,52,000

PUBLIC WORKS.

(1) Buildings and Roads,

The only administrative change effected during the year was the formation of the Naini Tal Special Sub-Division in the Kumaun Provincial Division with headquarters at Naini Tal for Cart-road Surveys and Protective Works.

Administrative changes.

Including outlay on contribution works, the total expenditure incurred in the Buildings and Roads Branch during the year 1895-96 was Rs. 46,19,428, or Rs. 2,46,710 less than the expenditure during the eyear 1894-95.

Total outlay.

The total of the Establishment charges for the year 1895-96 was Rs. 12,54,922. This amount, which includes a sum of Rs. 1,49,913 on account of charges for the Thomason Civil Engineering College and the

Roorkee Workshops, is less by Rs. 43,599 than the corresponding total for the year 1894-95.

Detail of outlay.

Distributed by service heads, the expenditure was as under :-

				\mathbf{Ks}_{\bullet}
•••		• • • •	•••	1,70,266
***	•••	•••		25,97,482
•••	•••	•••		17,06,389
18	•••		•••	1,45,291
	Tota	ıl	•••	46,19,428

Classified by sub-heads, the expenditure was as under :-

	Original, Wo	orks. Repairs.
	Rs	Rs.
	74,400	63,093
**	. 7,85,882	10,69,456
	. 3,91,586	9,03,803
'otal '	. 12,51,868	20,36,352
	** **	Rs. 74,400 7,85,882 3,91,586

The following figures give the total actual expenditure for the four years 1892-93 to 1895-96:—

Servi	ice heads	•		1892-93,	1893-94,	1894-95.	1895-96.
Imperial { Military Civil Provincial Local (Incorporated) Contributions	***	100 111 111 110	***	Rs. 14,916 1,37,430 82,34,224 18,48,258 3,58,399	Rs. 30,680 1,69,223 27,62,943 19,37,435 2,10,627	Rs. 16,509 1,44,588 27,44,118 17,90,238 1,70,685	Rs. 20,285 1,49,981 25,97,482 17,06,389 1,45,291
		Total	,	55,93,227	_	51,10,908	

The unusually small outlay during the past year is due to this Department having been required, between the months of May and November 1895, to reduce its expenditure by Rs. 3,00,000 under Provincial and Rs. 25,728 under Local, which could only be effected by the stoppage of works in progress. The reductions, will, it is feared, not only necessitate considerable delay in completing the projects, but will result in some extra expense having to be incurred in eventually carrying them out.

Important works executed.

The following are some of the works of interest or importance undertaken during the year, a description of which will be found in the report:—

Buildings.

- (i) Additions and alterations to the Medical School buildings at Agra. Practically completed.
- (ii) Bacteriological Laboratory at Muktesar in the Naini Tal district.
- (iii) Conversion of Sherwood House into a suitable residence for His Honor the Lieutenant-Governor at Naini Tal. Nearly completed.
- (iv) New kacheri buildings at Naini Tal. In progress.
- (v) Special repairs to La Martinière Boys' School at Lucknow.

 Contribution work, Nearly completed.

- (vi) Constructing Commissioner's kacheri at Gorakhpur. Completed.
- (vii) Clearing the Mohan Pass on the Meerut, Roorkee and Landaur road, Saháranpur district. Completed.

Communications.

- (viii) Protective works in the Mohan Pass, Saháranpur district.

 Completed.
- (ix) Remodelling the new Tonga road from the Brewery to Naini Tal. Completed.
- (x) Protective measures for the safety of the Sher-ka-Dánda hill at Naini Tal.

Miscellaneous Public Improvements.

(2) Canals.

• The total direct and indirect capital outlay on these works during the year amounts to Rs. 13,14,317, or Rs. 5,80,079 more than in the previous year. The total capital outlay on irrigation works in these Provinces now amounts to Rs. 8,49,15,152.

Capital outlay.

The following are the most important of the new works which were New works, Capital, in progress or completed during the year:—

The Fatehpur Branch and Ghátampur distributary extension and the construction of training groynes in the Ganges river above the Narora Weir, Lower Ganges Canal; extending the right flank of the Hardwar dam; protective works on the Pathri and Ranipur torrents; the Pur, Muzaffarnagar, and Harsauli drains; and the improvement of the Nim nadi, Upper Ganges Canal; the western depression and Tilpat drains: and the remodelling of the Chhota Kosi drain, Agra Canal; the new retaining weir below the Naogaon dam, and the Basi and Lumb drains, Eastern Jumna Canal.

An expenditure of Rs. 57,369 from Provincial Revenues was incurred Agricultural works. on drainage improvements in canal-irrigated tracts.

The total charges against Revenue amounted to Rs. 24,16,703, a decrease of Rs. 3,96,317, compared with the previous year, due to expenditure under this head having to be curtailed in the depressed state of the provincial finances.

Working expenses.

One hundred and eighty-one miles of new channels were opened during the year, bringing the total mileage of all channels up to 11,241 miles.

Mileage of channels.

Two million ten thousand and twenty-one acres were irrigated by the canals under the direct control of the Irrigation Department. The increase over the previous year, which is entirely in the area under rabi crops, being due to the dryness of that season.

Area irrigated.

The revenue assessed amounts to Rs. 80,45,388, or about 28½ lakhs in excess of the previous year. The assessments exceed those of any previous year by nearly five lakhs of rupees.

Revenue assessed.

The gross revenue realized was Rs. 50,96,578. This is the lowest recorded since 1879-80, the decrease being due to the low assessments during the wet rabi of 1894-95.

Gross revenue realized.

viii

Net revenue.

The net revenue realized amounts to 3.16 per cent. of the capital outlay. Taking the four canals classed as productive, the net revenue is 3.45 per cent. on the Capital outlay against 5.56 in the previous year.

LAND REVENUE AND AGRICULTURE.

Outstanding arrears. Considering the character of the year, the collections on account of arrears, allowing for remissions which were necessary, must be regarded as satisfactory. The real balance outstanding was something less than Rs. 8,000, and was due principally from estates under attachment.

Current revenue.

Of the current demand of revenue on the roll, 98.5 per cent. was collected. The greater part of the outstanding balance represents revenue suspended or postponed on account of the unfavourable seasons. The largest remissions were granted in the Bundelkhand districts, where the crops had failed. Discrimination was generally exercised in collecting the revenue, and time allowed for payment to the poorer landholders. It is satisfactory to record that the deteriorated areas in the Agra Division which suffered from agricultural depression are recovering; and that the wire fence erected between Bhartpore and British territory has proved successful in keeping out wild cattle, and in enabling a larger revenue to be realized in the border villages.

The canal revenues were affected owing to the heavy winter rainfall, the demand for occupier's rate exhibiting a decrease of over 18 lakhs out of about 51 lakhs as compared with the previous year. The owner's rate was similarly affected, and the demand fell from Rs. 2,59,494 in 1893-94 to Rs. 1,52,726 in the year under review.

Revenue moneyorders. There was a steady increase in both the number and value of revenue money-orders issued, which shows that the system of making remittances by money-order maintains its popularity.

Rent litigation. North-Western Provinces. In the North-Western Provinces while there was an increase in the number of suits instituted, the number of applications decreased by about 21 per cent. Taking suits and applications together, the decrease was 6.5 per cent. on the figures of the previous year. The number of suits instituted was the highest on record since the Rent Act (XII of 1881) was passed; and the explanation suggested for the increase, as compared with a falling off in applications, was that in a year of indifferent harvests the landholders take an opportunity of securing decrees for arrears of rent against occupancy tenants with a view to their ejectment, while they cannot afford to eject the tenants-at-will. This theory is corroborated by the fact that the number of applications to eject the latter class of tenants showed a marked decrease in the year under review.

The tenants contested 28 per cent. of the notices as in the preceding year, and were successful in 52 per cent. of the number contested and decided.

There was an increase of 28.70 per cent. in the number of applications to eject protected tenants for non-payment of rent. Occupancy tenants were ejected from 55,559 acres as compared with 40,502 in the

previous year, ejectment having taken place in pursuance of 38'85 per cent. of the notices issued, against 38'98 per cent. in 1893-94 and 36'29 per cent. in the previous year. Resignations of occupancy holdings show a steady increase, which is attributed to agricultural depression; but those tenants who are forced to surrender their occupancy rights are frequently let in again as tenants-at-will.

In Oudh there was a falling off in the number of suits instituted, the most marked decrease occurring under the head of suits to contest enhancement or ejectment. Eviction actually took place from 8,306 holdings with an area of 55,717 acres, about one-third of which area was relet to new tenants. The average rise in the rent of lands relet from which statutory tenants were ejected was a little more than 7 per cent., or slightly above the percentage allowed by law. The Government had under consideration a special report submitted by the Board of Revenue on the subject of illegal enhancement; but, as sufficient trustworthy evidence had not been adduced to warrant an amendment of the enhancement sections of the Rent Act, the Government approved the proposal that District Officers should continue to watch the working of the Act, and scrutinize more carefully reported cases of illegal enhancement. The devices used to evade the law were less widely resorted to than in previous years, owing possibly to the difficulty experienced by landlords in realizing even the existing rents in full; and, although the practice undoubtedly still prevails, no authenticated case came to light in which a premium was levied on the grant or renewal of a tenancy.

There was a marked increase in the advances under the Agriculturists' Loans Act. The figures were the highest on record since the Act was passed, and amounted to Rs. 6,77,280 as compared with Rs. 1,97,983 in the previous year. The largest increases were in those districts in which the effects of the bad seasons were most severely felt, and in which there was a heavy mortality among cattle. The money distributed was of material assistance to the agricultural classes, whose resources were, owing to the character of the year, greatly reduced.

The number of districts under settlement was the same as in the previous years, viz., three in the North-Western Provinces and nine in Oudh, In only one district, Budaun, was a record-of-rights under preparation, as the existing rent-rolls in that district were considered untrustworthy. In accordance with the scheme now in operation for the systematic revision of the land records by the permanent agency of the Land Records Department, the record operations are limited to the correction of the annual papers, to be performed with special care and under special supervision, and without attestation under the settlement rules, or the preparation of a record-of-rights. Under the guidance of the Settlement Commissioner great progress was made in Oudh in carrying out assessment operations on existing rent-rolls. In the North-Western Provinces the settlement of Garhwal has been completed; and the Meerut district and the Lalitpur sub-division of the Jhansi district have been formally brought under settlement. Sanction has been accorded to the revision of the assessment in the Kheri and Bahraich districts; and in Shahjahanpur

Rent litig ation, Oudh.

Advances under the Agricultur is ts' Loans Act.

Settlement operations. enquiries were being made with a view of enabling the Government to determine whether a general revision of the assessment was necessary in that district.

State properties.

At the beginning of the year there were 400 State properties in the provinces with a land revenue demand of Rs. 1,33,797. During the year 13 estates were acquired and 21 were removed from the accounts, leaving at its close 392 estates paying a revenue of Rs. 1,34,514. The total rental demand of these properties, including arrears, was Rs. 7,58,048, of which Rs. 7,10,215, or 94 per cent., were collected. After defraying charges on account of revenue and rates and cost of management and improvements, the net profit to Government from these estates was Rs. 2,09,274.

Court of Wards.

There were 149 estates under the management of the Court of Wards at the close of the year, or one more than at its commencement. Among the estates which have come under the Court's management may be mentioned Nasir Ali Khan's estate (Cawnpore), which is largely involved, the debts amounting to nearly 1½ lakhs of rupees; and the Raja of Bhinga's estate in Bahraich, which has a gross income approximating Rs. 2,28,000, but is free of incumbrances. The total rental demand, current and arrear, in all estates was Rs. 55,37,843, of which Rs. 48,48,850, or 87.55 per cent., was collected. The cost of management fell at 9 per cent. of the income as compared with 8.7 per cent. in the previous year.

In regard to improvements it has been laid down as a maxim that "the Court of Wards is not a landlord of the money-lending classes, looking only to an immediate return for capital sunk, but one which should find a return in the general improvement of the property." except in the Balrampur estate, little effect was given to this principle during the year: the other estates with a gross income of over 35 lakhs of rupees spent less than two per cent. of that income on improvements for the good of the tenantry or the security of the rental. While it is not possible in a large number of estates, owing to their insignificance and indebtedness, to expend much money on improvements, still something more might have been done in this direction in the year under review, and it is hoped that progress will be recorded in future years. Satisfactory progress has been made in sanitary measures, and attention has also been paid to vaccination. The surplus funds of the more prosperous estates were invested to the extent of Rs. 1,76,900 in Government securities, and Rs. 5,31,326 in the purchase of lands and houses and in loans to other estates.

Working of the Department of Land Records and Agriculture.

As explained in a preceding paragraph, a scheme is now being worked by which the revision of the land records will be effected by the permanent agency of the Land Records Department. The cadastral surveys made by the patwaris under the supervision of the survey staff are preceded by a professional traverse, and both surveys and record work are progressing satisfactorily. The result of the scheme as regards the training of the patwaris and kanungos and the quality of their work is reported to have been excellent. The revision of patwaris' circles in the North-Western Provinces has been practically completed. In Oudh the organization of these circles has been started in several districts, and will

be carried out by District Officers on conclusion of settlement operations. The number of patwaris employed in the provinces has been further reduced from 29,398 to 29,355, owing to the revision of circles in certain districts. The kanungo school which was opened at Cawnpore in 1891 was closed during the year after the first session was over. The necessity for such a school has disappeared, as there are now survey parties at work in several districts; and kanungos, by being attached to these parties, obtain a much better practical education in surveying than could be obtained in that school. In order to make the kanungo's post more attractive than at present, it has been decided that not less than five appointments of naib-tahsildars shall be filled up annually by promotion of subordinate revenue officials, and five kanungos have already been selected for promotion.

While there was an improvement in the punctuality with which the annual papers were filed, there was a decrease in the number of fields tested by superior officers. Increased attention has been paid to the maintenance of the pargana books, and the Board of Revenue have under consideration the question of altering the rules so as to ensure greater uniformity of the method and a more intelligent use of the registers.

Owing to unseasonable weather the investigations at the Cawnpore Experimental Farm were conducted under very unfavourable conditions. The enquiries made were connected principally with the value of various manures and with the possibility of introducing new varieties of cane into the neighbourhood of Cawnpore. The principal facts established appear to be that for wheat manures which contain a large proportion of nitrogen are the most valuable; that in order to secure the maximum outturn it is important to protect the common variety of cane from being laid by wind and rain; and that cane from other parts of the provinces gave as good if not a better outturn than the local variety. Various experiments were made with other crops, but no definite opinion can be formed upon their value.

The Agricultural Department has for some years been engaged in ascertaining whether it is possible to deal successfully with those areas of sterile waste which unfortunately are extensive in many districts of the provinces. Three plots now remain under treatment. One of these, the Cherat reserve in the Aligarh district, has been leased with the Government Dairy Farm to Mr. Keventer, the dairy expert; but experiments in the cultivation of grass and trees and of certain cereals are still carried out. The result is that rice and grass are found to flourish on land on which water can stand, and that while the sowing of trees has proved unsuccessful, trees planted in manured soil grow well. At Juhi in the Cawnpore district more attention has been paid than formerly to the planting of fuel-producing trees. The soil of the plot under treatment has improved so much that rice and even spring crops can be raised, but fodder grasses have not been so successfully cultivated. At Gursikran in Aligarh, rice and spring crops and potatoes have been cultivated with a considerable measure of success, and fodder grasses continue to displace coarser varieties in and around depressions where water is retained.

Filing and testing of village papers.

Cawnpore Experimental Farm.

Reclamation of usar land.

Saharanpur, Mussoorie and Lucknow Gardens. The season was not a propitious one for gardening operations owing to excessive rain followed by a long drought. The expenditure on the several gardens amounted to Rs. 41,201, and the receipts to Rs. 39,356, including the value of seeds and plants supplied to soldiers' gardens and of drugs to the Medical Department.

Arboriculture.

The actual length of avenues at the beginning of the year was 8,435 miles, to which 161 miles of new avenues were added during the year. Owing to the extraordinary variations in the methods adopted by the various District Boards, an excessive amount of new work has been undertaken in some districts; and it has therefore been ordered that plans of operations shall be drawn up for a period of five years, and that the Boards shall carry out the schemes so prescribed as closely as possible. The expenditure incurred in planting trees and maintenance was Rs. 67,611 as compared with Rs. 71,963 in the previous year. The receipts aggregated Rs. 59,234, so that the actual cost to Government was only Rs. 8,379.

Serioulture.

Up to the present the interesting experiment of rearing silk-worms in the plains from imported Assam cocoons seems to have been a failure. A new supply of worms was received in August 1895, and contained 100 cocoons. Up to the end of February 1896 the worms produced only three cycles, the first of which was a successful one: the second a poor one: and the third a total failure owing to the death of the worms from the effects of the high temperature. In view of these results it is now intended to abandon the experiment.

Civil Veterin a r y Department.

It has been explained in previous reports that the Imperial Department of Horse-breeding supplies high class stallions to breed from selected mares, while the Provincial Department provides a less expensive class of sire with a view to the improvement of stock in districts where good brood mares are scarce. The Government had occasion in the middle of the year to notice the generally unsatisfactory progress of horse-breeding operations and the lack of encouragement on the part of District Officers to the industry, and the attention of the latter was called to the necessity of doing all in their power to encourage horse-breeding both by exercise of their personal influence and by giving their cordial assistance to the officers of the Civil Veterinary Department; it being remarked that the most useful form in which help could be afforded was that of inspection of stands of stallions and the supply of information as to the possibility of extending operations.

During the year under review there were 48 stallions at work, or one less than in 1894-95. There were besides 18 stallions issued by the Civil Veterinary Department on payment by the Court of Wards and private persons. At the end of the year 34 applications for stallions remained uncomplied with: ten more stallions have been purchased in the current year; and the Government has under consideration, in connection with the next provincial contract, the question of expanding horse-breeding operations.

Outbreaks of cattle disease were reported from 27 districts, rinderpest having occurred in 26. The treatment of cattle disease, which is an important part of the work of the department, is seriously handicapped

by the insufficiency of the present staff and the want of skilled professional supervision. The question of providing an additional officer for the purpose of supervising the subordinate veterinary staff and devoting his time to the treatment of cattle disease is under consideration. Outbreaks of surra also occurred among horses on the dåk lines to Mussoorie and Naini Tal, and amongst the Government transport animals at Bareilly. Cases of glanders were reported from some districts. The Government of India have recently decided on a general extension of the Glanders and Farcy Act*(XX of 1879), and measures will be taken in due course to give effect to these orders.

There was a decrease in the number of emigrants registered for the Colonies, the figures being 17,315 as compared with 26,707 in the previous year. The eastern districts of the provinces continue to head the list at the largest recruiting localities. Inland emigration was confined to a single district, Gházipur, and the number recruited was 252 during the year, the figures of the previous year being 372. Free emigration, that is emigration outside the provisions of the Act, was carried on to a large extent, no less than 690 persons having found their way to the labour districts, viz., 150 from Basti and 540 from Allahabad.

Emigration ..

SEPARATE REVENUE.

The gross receipts for 1894-95 amounted to Rs. 56,48,608, as against Rs. 58,52,663 in the previous year, when the receipts were the highest on record. This decrease, amounting to $3\frac{1}{2}$ per cent., occurred on the revenue derived from country liquor and opium, and is mainly attributable to unfavourable seasons and the consequent decline in the consumption of liquor by the agricultural classes.

Excise.

At the time when the sales of the licenses for the vend of country spirits were held, the outlook was not unpromising, and the amount paid in license fees exceeded the figures of the previous year by half a lakh of rupees. But with poor harvests in the eastern districts of the North-Western Provinces and in Oudh, the receipts from still-head duty fell off by three lakhs, indicating a diminution in consumption of liquor, amounting to as much as 200,000 gallons.

Country liquor.

The modified distillery system has now entirely disappeared, and the ordinary central distillery system is in force throughout the greater portion of the Provinces; the outstill and farming systems being only retained in the thinly-populated and inaccessible tracts on the boundaries of the Province, where, under the ordinary system, it would generally be impossible to prevent the extensive manufacture or import of illicit liquor. Complaints have been made of the difficulty of repressing illicit practices in some of the tracts administered under the ordinary system; but the Government is averse to allowing outstills except in frontier tracts, and it is hoped that certain modifications in the existing system such as the provision of bonded warehouses and the graduation of the still-head duty will remove the difficulties brought to notice.

In spite of a reduction in the number of shops, the receipts from the sale of these drugs rose from Rs. 7,57,958 in 1893-94 to Rs. 7,83,060.

Hemp drugs.

The system of administering the excise on these drugs has been altered since the close of the year under report in order to give effect to the recommendations of the Hemp Drugs Commission.

Opium.

A falling off in the opium receipts from Rs. 7,90,097 in 1893-94 to Rs. 7,68,736 was coincident with a large extension of the area under poppy cultivation, and also with some enhancement of the price at which opium is issued to the licensed vendors.

Stamps.

The receipts from non-judicial stamps remained almost stationary while a considerable increase in the sales of Court-fee stamps brought up the total gross receipts of the Department from Rs. 70,77,234 in 1894.95 to Rs. 73,00,008 in 1895-96, the highest figure which has yet been reached. This increase is probably connected with the succession of unfavourable seasons in these Provinces in recent years. These in the first instance tended to cause an increase in the number of obligations incurred or renewed, with a corresponding increase in the demand for non-judicial stamps. Now, however, that a continuance of unfavourable conditions has made the position of debtors precarious, these obligations have begun to furnish the subject-matter for an increasing volume of litigation, and receipts from Court-fee stamps have consequently risen.

Income Tax.

There was an increase in the receipts under every head except Part III (interest on securities), the total receipts rising from Rs. 23,81,991 in 1894-95 to Rs. 24,13,803 in 1895-96. The increase of nearly 12 per cent. in the collections under Part II (profits by companies) may be taken as a satisfactory sign of increasing commercial activity in these Provinces. Under Part IV (other sources of income) the increase amounted to Rs. 26,667 or 1.3 per cent. The incidence of the tax under Part IV was Rs. 44 per thousand of the population as compared with Rs. 43 in the previous year, one person in every 648 of the population was assessed to the tax, and the average amount of tax paid by each person assessed was as in the previous year Rs. 28.

FORESTS.

Area.

The areas of the different classes of forests remained practically the same as in the previous year; that of the reserved forests being 3,766 square miles against 3,765 in 1894-95, that of protected forests being 9,319 square miles in each year, and that of unclassed forests 43 square miles against 44 in the preceding year. Of the area classed as protected forests, 9,225 square miles are under the management of the District Officers of the Kumaun Division, and will in future be excluded from the returns.

Settlements.

The revision of the settlement of certain reserved forests in the Kumaun Civil Division remained unfinished at the close of the year, the chief cause being pressure of work in other Departments, which reduced the time at the disposal of the Forest Settlement Officers. In Oudh, considerable progress was made towards defining and recording the concessions to be granted to the villages bordering on the forests. In the Dehra Dún Division, 1,056 acres of land were finally notified as reserved forest; while the work of revising and defining more accurately the forest boundaries in Jaunsár made good progress.

In Oudh 460 square miles of forest were surveyed, and it now only remains for the area to be mapped.

Surveys.

Three working-plans were sanctioned during the year. Others, for the forests in the Garhwal and Ganges Divisions, and a revised plan supplementary to the general working-plans for the Dehra Dun forests, were drawn up and received the sanction of the Government after the close of the year. The term of the working-plan for the Naini Tal subdivisional forests expired during the year; but in consequence of the delay in completing the settlement of these forests the framing of a new plan has been retarded. For the Bundelkhand forests no working-plan has yet been taken in hand, the reason for which is explained in the body of the report.

Working-Plans.

There was a decrease in the number of cases of breaches of the forest law as compared with the figures of the previous year, and a corresponding decrease in the number of persons concerned; while the number of cases compounded increased from 530 in 1894-95 to 637 in the year under review.

Offences.

The conditions of the season, unlike those of the preceding year, made fire conservancy extremely difficult, there having been practically no rain between October 1895 and the middle of June 1896. The results were correspondingly disastrous throughout the forests, no less than 326 square miles of forest having been burnt.

Conservancy.

The area open to grazing was reduced from 2,328 square miles to 2,172 square miles, the main cause being the revision of the concessions granted in the forests of the Oudh Circle, as a result of which the area open to grazing was contracted. The number of cattle using the forests was—buffaloes, 100,981; bullocks and cows, 448,201; sheep and goats, 154,132; and other animals, 26,635; against 113,961 buffaloes, 474,876 bullocks and cows, 184,708 sheep and goats, and 21,759 other animals grazed in 1894-95. The value of the grazing, at full rates for each animal, would be Rs. 137,446; but the revenue actually collected amounted to Rs. 68,100, the balance, Rs. 69,346, representing the value of the grazing to owners entitled to use the forests free or at privileged rates.

Grazing.

Timber to the amount of 3,050,000 cubic feet, fuel to the amount of 8,487,000 cubic feet, and minor produce to the value of Rs. 4,02,418, were removed from the forests during the year. The corresponding figures for the previous year were—timber 5,095,000 cubic feet, firewood 10,802,000 cubic feet, and minor produce Rs 4,52,266. The reasons for the decrease are detailed in the body of the report.

Outturn.

Financially, the results were not as satisfactory as in the previous year. Scarcity produced slackness in trade, while large quantities of firewood which were made over to the Commissariat Department towards the close of the year by the School Circle had not been paid for when the accounts were made up. In the Oudh Circle the main feature was the exhaustion of the stock of valuable timber which had been accumulated in former years by departmental agency, and the sale of which had been counterbalanced by no corresponding outlay, so that the revenues of that Circle for a few years have presented an exaggerated appearance of prosperity. The total receipts of the year amounted to Rs. 14,66,862 and the

Financial results.

expenditure to Rs. 9,31,868, leaving a surplus of Rs. 5,84,994 only. Of the expenditure Rs. 5,29,088 represents the cost of conservancy and works, and Rs. 4,02,780 the cost of establishment. The estimated value of the produce removed by rightholders, villagers who have been granted concessions, &c., is Rs. 2,77,000.

EDUCATION.

Leading features of the year.

The number of schools, which was 4,799 in 1893-94, again increased from 4,814 to 4,824; and direct expenditure, which had risen from Rs. 23,77,032 in 1893-94 to Rs. 25,94,290 in 1894-95, amounted to Rs. 27,06,504 in 1895-96. This increase was accompanied by an advance from Rs. 8,35,733 to Rs. 8,45,790 in indirect expenditure. On the one hand, the percentage of the contribution from public funds other than municipal revenues decreased from 57:33 to 54:38 and, on the other, that of fee-income rose from 23.65 to 25.69. The improved condition of the feeincome, though in itself a satisfactory feature, had its immediate result, in spite of the increase of institutions and expenditure, in a further decrease from 2,05,932 to 2,04,274 in the average attendance of male pupils, which, evenly distributed over all branches of education, afforded regrettable testimony to the weakness of the craving of the population for instruction, and was by no means counterbalanced by the increase from 9,569 to 10,429 in the average attendance at girls' schools, mostly of missionary origin and affecting special sections of the community. With a view to giving the needed impetus to private enterprise in the direction of primary education, the Government, while increasing its contribution by Rs. 75,000, took steps to ensure the allotment of grants-in-aid to indigenous institutions from the funds at the disposal of the District Boards. In its technical aspect, primary education received notable encouragement by the appointment of the Principal of the Thomason Engineering College at Roorkee to be Visitor of Industrial Schools, for deserving pupils of which industrial classes were opened at the College. It was satisfactory to observe that the raising of school fees in State and aided institutions had the direct result of enabling two High Schools dependent entirely on private enterprise to be opened at Bareilly, while the accession of the unaided Kayastha Páthshála at Allahabad to the list of Arts Colleges was a pleasing featuro in accordance with the policy of the Govornment to maintain at its expense only a limited number of such institutions to serve as exemplars of efficiency to others.

Higher education.

In consequence of the increase in fees, the average enrolment at Arts Colleges, already noticed in last year's report as inadequate to a province of this magnitude, descended from 1,638 to 1,506, although the number of institutions increased from 15 to 16. The decrease in enrolment was accompanied by a fall from 905 to 871 in the number of candidates for University Examinations at which, so far as the B. A. standard is concerned, there were still 187 competing for the literary degree as against only 64 offering themselves in Science. In this examination, however, the number of failures was 128 out of 251, and was traceable mainly to the papers in Philosophy and English. The higher percentage of success in the Science course in both the B. A. and the Intermediate Examinations, coupled with the efficient laboratories at three of the Arts Colleges,

constituted a happier augury for the popularity of practical studies. In Anglo-Vernacular Schools, the total expenditure increased from Rs. 7,25,665 to Rs. 7,68,011, while the attendance fell from 28,368 to 27,846, giving an incidence of Rs. 28 against Rs. 26 per scholar, out of which the Government contribution stood at Rs. 12. This result, arising immediately from the enhancement of fee-income, marched with a decided improvement in private enterprise evidenced by the circumstance that, while the enrolment decreased in schools supported by the Government, it rose in unaided institutions from 2,204 to 3,117. It was decided to withdraw grants-in-aid from the preparatory section of Municipal Branch schools in order to release funds for the promotion of vernacular education by reducing the number of pupils ceasing to study English before their studies are likely to be useful. The aggregate of candidates for public examinations increased from 4,766 to 4,986; while that of passes fell from 1,783 to 1,663, owing to a marked influx of private candidates, achieving an indifferent measure of success as compared with those from State Colleges, from which about the same number of competitors appeared as in the year preceding with a higher percentage of passes. The experience of the year under report fully justified the experiment of starting special classes in Anglo-Vernacular Schools for pupils from Vernacular Schools after passing the Middle Vernacular examinations, and confirmed the Government in the hope that Municipal Boards, at present maintaining Anglo-Vernacular Schools for a handful of aspirants for an English education, would appreciate the economy of merging them in Middle Vernacular Schools and utilize the funds thereby released for the purpose of founding scholarships to enable promising pupils to proceed ultimately to the District High Schools. The number of primary institutions increased from 4,170 to 4,186, while the number of pupils decreased from 176,314 to 174,883, representing a reduction in percentage on the population of the school-going age from 48.4 to 47.9, with an incidence of expenditure of 4.1 annas per scholar. The continued backwardness of the eastern districts was demonstrated by a percentage of only 36.0 upon the population of the school-going age as contrasted with 64.2 in Bundelkhand.

Technical educa-

Female education.

the three Normal Schools with a suitable curriculum for vernacular teachers. An English Department has since been added at Lucknow for the training of teachers for Anglo-Vernacular institutions. The attendance at Law classes, mentioned in last year's report as the only branch of technical education giving promise of becoming popular and self-supporting, decreased from 752 to 602, while the number of successful candidates at the prescribed examinations exhibited a satisfactory increase from 45 to 51. In this place it may be noted that the Allahabad University passed the needed reform of limiting, with effect from the year 1899, candidature for a Law degree to graduates in Arts or Science. Female education continued to be, in the main, an adjunct of missionary enter-

In connection with technical education the leading feature, besides

the co-ordination already noticed of the Industrial Schools to the Thoma-

son College of Engineering, was the completion of the reorganization of

pupils from 1,290 to 1,521, at an expenditure of Rs. 72,024 as against Rs. 63,037, out of which the contribution from public funds decreased from Rs. 15,116 to Rs. 14,580. Aided Primary Vernacular Schools decreased from 115 to 109, while the pupils increased from 4,083 to 4,535, at an expenditure of Rs. 58,362 as against Rs. 52,971, out of which the Government contributed Rs. 17,813 as against Rs. 18,919. The reduction of the subsidy arose from the necessity of enforcing the rules relating to grants-in-aid with greater stringency; but the grants even as reduced were still distinctly liberal in view of the standard of education imparted at most of the institutions. State Primary Vernacular Schools, maintained by District Boards, decreased from 128 to 127, while the enrolment increased from 2,990 to 2,997, at an expenditure of Rs. 16,644, of which Rs. 16,609 represented the State contribution, whereas in the year preceding the entire outlay of Rs. 17,262 had fallen on the public funds. The difficulty of obtaining suitable teachers was still very apparent; and the Government has since taken into consideration a proposal to open a training class in connection with a European Girls' School. The experiment of allowing religious instruction to be received during reading hours by pupils, at the option of parents, in a separate building under the direction of a teacher entertained by a local Committee, was made at the Amroha High School at the instance of the Musalman community; and the Government expressed its willingness to grant the same concession in other places where a religious community was prepared to make suitable arrangements for the purpose. The statistics of European education varied little from those recorded for the year preceding, and showed 21 aided schools for males and 22 for females, respectively bearing on their registers 1,741 and 1,561 pupils, and earning grants to the extent of Rs. 54,095 and Rs. 54,192. The higher rate of grant per female arose from the facility of passing in needlework.

Religious instruc-

European education.

MEDICAL AND SANITARY.

Vital statistics.

The year under report, following upon the most unhealthy on record, was exceptionally healthy, inasmuch as the death rate per mille was reduced from 42.51 to 29.13, thus falling below the decennial average of 32.79 from 1881 to 1890. The birth rate per mille, which stood at 40.95 in 1893 and decreased to 39.70 in 1894, was further reduced to 34.90 as against a mean figure of 39.50 for the same decennial period. The mean figures for the quinquentium ending with 1895 disclose a retardation, located mainly in the Allahabad Division and Eastern districts, and most probably connected with the prevailing scarcity, in the increase of the population, which has been augmented to the extent only of 1.9 per cent. as against 3.9 in the corresponding section of the preceding decade. urban death rate, which had risen from 29.78 in 1893 to 48.37 in 1894, was again reduced to 34.83, while the birth rate, which had fallen from 40.61 in 1893 to 39.62 in 1894, exhibited a trifling decrease to 39.37. Meteorological conditions were favourable until the premature disappeare ance of the monsoon followed by a progressive increase in the monthly death rate which, instead of declining from November onwards, attaixed its maximum in December.

Registration and .disease.

The registration of vital statistics, though still capable of improvement, was on the whole extremely efficient. A percentage of 21:0 on births and of 20.0 on deaths was tested by the local authorities, whose scrutiny disclosed 2.78 per cent. of omissions for births and 2.64 for deaths, and by the Vaccination Department, whose returns showed 1.46 and 72, respectively. The continuous diminution of small-pox, which has become more and more pronounced during the past 25 years, was evidenced by a reduction in the death-rate from this disease from 09, hitherto the lowest figure recorded, to 04. The death-rate from cholera, which had increased from '26 in 1893 to 3.80 in 1894, was again lowered to 1:10, for which one epidemic in Fyzabad and another in Hamírpur mairly accounted. The gatherings at Hardwar and the Magh Mela enjoyed immunity from this disease.

Substantial progress was effected in the water-supply and drainage Sanitary measures. works at Allahabad, Agra, Benares, Cawnpore, and Lucknow. The project for water-supply at Meerut, which was sanctioned in the year preceding, was completed at the moderate outlay of Rs. 8,00,000 with maintenance charges of Rs. 70,000 only; but the schemes in respect of Fyzabad, Bareilly, and Farukhabad were postponed pending the settlement of financial difficulties. Over Rs. 21,00,000, the scientific application of which is guaranteed by the supervision of the Sanitary Board and its Special Engineer, was expended on works affecting public health, out of an aggregate income of Rs. 55,00,000 in 103 municipalities. The Sanitary Board was instructed to prepare a manual relating to the disposal of night-soil at municipal centres and, in consultation with the local authorities, to give effect to a series of rules dealing with such measures of rural sanitation as are reasonably within the competence of village communities.

The arrangements of 1893, which transferred the executive control

of vaccine operations in each district to the Civil Surgeon, enabled the

Government to redistribute the Provinces into two circles and to bring under reduction one of the three Deputy Sanitary Commissionerships. This economy has been accompanied by steady progress, inasmuch as the average number of successful primary vaccinations increased by 40 per cent. from 886,698 in 1890-93 to 1,245,074 in 1893-96. The actual increase represented a percentage of 55 from 828,031 in 1890-91 to 1,299,663 in 1895-96. In 1895-96, moreover, the successful primary vaccinations amounted to 79.76 per cent. of the total births, furnishing the nearest approximation hitherto recorded to the accepted standard of 80 per cent. The ratio per mille of successful vaccinations in municipal areas increased from 34.92 in 1894-95 to 38.15 in 1895-96. Though the Vaccination Act applies to municipalities only, voluntary operations are conducted throughout the Provinces; and, as the average number of operations effected by each vaccinator within urban limits was only 957 out of an accepted maximum of 2,000, the short-sightedness of the policy of certain corpora-

tions in prohibiting their officers from working in the adjoining areas had not even the excuse that the time thus employed would be lost to the performance of more immediate duties. There was no alteration in Vaccination.

the system of supplying lymph to the districts for commencing operations at the outset of the cold weather; but the Government had under consideration a project for the establishment of a central depôt for the preparation of bovine lymph in a form suitable for transfer, thereby holding out a prospect of dispensing by degrees with the existing arrangements for collecting human lymph by special operations in the hills during the hot weather and the rainy season.

Lunatic Asylums.

Lunatic Asylums are established at the four centres of-

- (1) Bareilly;
- (3) Agra;
- (2) Benares;
- (4) Lucknow;

with accommodation for 1,286 inmates. The year opened with a lunatic population of 1,030. Admissions amounted to 259 and discharges to 161. There were 83 deaths; and the resultant population stood at 1,045 at the close of the year. The daily average strength increased from 1,038.44 to 1,050.51; but the maximum number confined on any one day. was reduced from 1,098 to 1096; and was in no instance, therefore, in excess of the available accommodation. The death-rate per mille, which had risen from 52 in 1893 to 92 in 1894, again descended to 79 and varied from 45 at Bareilly to 133 at Benares. The provincial death-rate, it will be recollected, fell from 42 to 29. The large proportion, amounting to 24 per cent. of lunatics, still admitted from the district in which each of the four asylums are situated suggested the inference that the provisions of law relating to the subject are less familiar to the public and the police of the outlying country than to the more immediate neighbours of the institutions. Exclusive of Rs. 9,975 expended on construction and repairs, the cost of asylums further decreased from Rs. 64,814 to Rs. 63,344, in spite of the rise in the average population. Earnings of lunatics and contributious from paying patients reduced the net cost to Government to Rs. 53,534 as against Rs. 60,436 in 1894, mainly owing to the excellent administration of the Dairy Farm at Bareilly, which accounted for Rs. 6,323 out of a total of Rs. 8,938 for industrial profits.

Hospitals and Dispensaries.

The triennium ending with the year 1895 witnessed substantial progress in the administration of hospitals and dispensaries. The institutions for which detailed statistics are available increased from 289 to 315, including 38 against 27 for the exclusive treatment of females. The number of outdoor patients advanced from 3,376,125 to 3,955,681 and of in-door patients from 56,226 to 61,514. The total number of recipients of medical relief increased 17 per cent., from 3,432,351 to 4,017,195; and it was satisfactory to observe that, during the past nine years, the number of children treated rose, in general hospitals and dispensaries, from 514,095 to 1,064,524, in addition to 129,419 receiving attendance at institutions not in existence at the commencement of the period. In spite of this testimony to the growing popularity of hospitals and dispensaries, the conclusion that ignorant prejudices still militated against the complete utilization of medical relief was indicated by the circumstance that Hindus, though constituting 86 per cent. of the inhabitants, continued to resort to it in only twice the number of Musalmans. The daily average of in-door patients increased from 1,654 in 1894 to 1,716 for men, from 573 to 618 for women, and from 192 to 204 for children.

nominal accommodation provided was 2,363 beds for males and 1,110 for females; but in 10 hospitals it was distinctly inadequate and in six seriously deficient. The total number of major operations increased from 24,301 in 1892 to 29,607, of which 15,175, representing a percentage of 51.3, were performed by Assistant Surgeons. Minor operations advanced during the same period from 141,094 to 161,949. Receipts from all sources increased from Rs. 9,25,833 to Rs. 9,82,366 and expenditure from Rs. 7,28,353 to Rs. 7,55,252, with the effect that the resultant cash balance stood at Rs. 2,27,114 as compared with Rs. 1,97,481.

The Agra Medical School has for its purpose the training of Hospital Assistants, male and female, for the public service, whether military or civil. Private students are also admitted and increased from 15 in 1894-95 to 35 in 1895-96. The total number of male students, amounting to 213, exceeded the maximum of 200 contemplated by the rules, owing to no less than 62 admissions to the Civil class with the object of filling exceptional vacancies among the staff of Hospital Assistants. A rule, rendering candidates ordinarily ineligible unless recommended by the Director of Public Instruction, had the direct result of improving the status and qualifications of students entering the College. A similar improvement was noticed with satisfaction in connection with the female students at present recruited mainly from the native Christian community. The establishment of the Crosthwaite Girls' School at Lucknow, coupled with the stimulus of scholarships offered by the Provincial Committee of the National Association, will, it is hoped, contribute towards obtaining suitable candidates from amongst Hindus and Musalmans of good position. During the year the Chemical Laboratory was finished and the examination hall approached completion; but the questions of boarding accommodation and an opthalmic hospital were again postponed pending an improvement in the condition of Provincial finance.

LOCAL SELF-GOVERNMENT.

No legislation was undertaken during the year in regard to District Boards. There were, as in the previous year, 44 District Boards and four District Committees constituted under Act XIV of 1883.

The income of the District Boards in these Provinces consists chiefly of the proceeds of rates or cesses levied on the land in addition to the land revenue and bearing a definite proportion to it. They also receive the receipts of the educational and medical institutions under their control, and the proceeds of arboriculture, and their accounts are credited with the net receipts from cattle pounds in each district. The expenditure on services transferred to the Boards exceeds the income at their disposal, and the deficit is made good by an allotment from Provincial Revenues. According to the accounts maintained by the Boards the provincial allotment during the year under report amounted to Rs. 11,29,911, and the total income, including this allotment, to Rs. 37,84,420. Measures have for some time been in contemplation for placing the Boards in a position of greater financial independence by making them definite allotments instead of merely transferring to their account a sufficient sum to

Agra Medical School meet the excess of expenditure over income. The measures proposed have been finally approved and will be introduced with effect from the next financial year. The Boards will then be allowed to carry on their balances from year to year.

In many cases complaints have been made of the want of active interest shown by members of District Boards in their work; but on the other hand many of the reports have brought to notice the co-operation of individual members in supervising the administration of the services under the Boards' control, and it may be expected that when the financial powers of the Boards are enlarged the interest taken by members in their work will rapidly develope.

During the year under report there was a decline, owing to the general agricultural depression, in the attendance at the schools managed by the Boards. The attention of the Boards has been called to the necessity for more active measures to promote primary education, and funds have, since the close of the year under report, been placed at their disposal for the purpose. Several new dispensaries were established, and there was a steady improvement in vaccination work; while in a few districts special attention was paid to the improvement of village sanitation.

MUNICIPAL.

There are 103 municipalities in these Provinces with a population ranging from 267,910 in Lucknow to 5,306 in Shahdera in the Meerut district.

Legislation.

Two Acts (I of 1895 and II of 1895) affecting municipal administration were passed by the local legislature during the year, their chief object being to define more clearly the jurisdiction and procedure of courts in regard to appeals from the assessment and levy of taxes under the Municipal and Water-Works Acts.

Attendance members.

o f

The average number of members on each Board was 15 as in the previous year; but the average number present at each meeting fell from 8.9 to 8.5. The best attendance was obtained in some of the smaller municipalities. Many members besides attending the meetings of the full Boards devoted much of their time to attendance at the meetings of Sub-Committees, which in most municipalities dispose of a considerable volume of work.

Rules and Bye-

Thirty municipalities (in addition to 52 in the previous year) passed rules requiring that notice should be given of occurrences of cases of cholera and small-pox; and 25 municipalities (in addition to 66 in the previous year) adopted rules for the control of the slaughter of cattle for human consumption.

Seventeen municipalities also framed rules for the voluntary registration of sales of cattle in municipal markets.

Taxation.

Octroi was in force in 81 out of the 103 municipalities, having been withdrawn from Shahdera and Mowana during the year. In 27 towns no other form of taxation was resorted to. Octroi was also abolished in Cawnpore at the close of the year, taxes on loaded vehicles and packanimals entering the municipality and on consignments received by rail

being substituted for it. In Benares a tax was imposed on persons entering or leaving the municipality by rail.

The total income of the municipalities (including Rs. 10,33,675 from loans and other extraordinary items) was Rs. 52,92,870. The receipts from municipal rates and taxes amounted to Rs. 34,05,636, towards which octroi duties contributed Rs. 27,73,166. The incidence of taxation was one rupee and nine pies per head, or two pies above that of the previous years, and ranged between one anna six pies per head in the small town of Bhinga to Rs. 1-15-0 per head in Benares, and over five rupees per head in the hill stations of Mussoorie and Naini Tal. The expenditure amounted to Rs. 54,00,455. This sum includes over 15 lakhs expended on water-supply and drainage (or $3\frac{1}{2}$ lakhs more than in the previous year) and over $4\frac{3}{4}$ lakhs paid in interest and repayments of loans.

Income and expenditure.

The unfavourable agricultural conditions of the previous year continued to prevail; and with large importations of food-grains, octroi receipts and refunds were again above the normal.

Refunds.

Attention continued to be paid to sanitary requirements in almost all municipalities, and numerous improvements of a minor character were effected. An account of the water-works in the large cities is given in the body of the report. The most noticeable features are the opening of the works at Dehra before the end of the year and the completion of the Meerut works which, however, were not opened till after the year had closed.

Sanitation.

The expenditure incurred by municipalities on education was Rs. 1,30,875 as against Rs. 1,29,450 in 1894-95, exclusive of the contributions amounting to Rs. 1,05,262 which municipalities make to District Boards for the support of schools and of medical institutions. The number of schools supported or aided by municipalities increased from 316 with 33,642 pupils to 318 with 30,076 pupils. The attention of municipalities was called to the necessity for contributing more liberally to the encouragement of education—especially of primary education—and an improvement in this respect may be expected in the ensuing year.

Education.

The number of successful operations increased from 109,373 to 115,657, the cost being slightly higher than in the previous year. The Vaccination Act was in force during the year in all the municipalities of these Provinces.

Vaccination.

The death rate fell from 44.94 per mille in the previous year, which was exceptionally unhealthy, to 37.25, while the birth rate rose slightly.

Vital statistics.

The working of the Boards continued to be generally satisfactory. The question of the regulation of intra-municipal burial-grounds was energetically taken up, and many of the most insanitary have been closed. The drainage scheme for Cawnpore, to which reference was made in the last report, is still under discussion, while some of the smaller water-works schemes which have been projected are likely to be postponed in view of the difficulty of meeting at the present time the increased expenditure which their introduction would involve.

General results.

The standard of municipal administration has risen in these Provinces in recent years, and the recognition of the necessity for improving the sanitary surroundings of the urban population has, especially in the larger cities, made the work of the Boards much more onerous than before. In reviewing the work of the Boards the Lieutenant-Governor has observed with satisfaction that widening responsibilities have stimulated the interest taken by the members in their duties, and that the increasing difficulties of municipal administration have been met with increased intelligence and energy.

POLICE.

Statistics of crime.

The number of cases of cognizable offences reported, which had been 183,435 in 1893, again increased from 203,346 to 223,353. Cases investigated had fallen from 110,651 în 1893 to 106,587 in 1894, but rose during the period under report to 117,810. The number of cases decided, which was 64,550 in 1893 and 65,850 in 1894, attained a total of 73,735; and out of these the number of convictions was 63,812 as compared with 55,622 in 1894 and 54,187 in 1893. The percentage of convictions to decisions had stood at 84 for the two years preceding, and advanced to 87, while the ratio of convictions to investigations disclosed a steady progress from 49 to 52 and again to 54. The increase indicated by these figures was chiefly explained by a rise of 13,082 from 85,483 to 98,565 in reports of burglaries, and of 3,505 from 65,948 to 69,453 under the heading of thefts. The reasons were, 1st, a real increase of crime under stress of privation through failure of harvests; and 2nd, fuller reporting as the result of the rules of 1893, which relieved the police of the necessity of investigating burglaries without loss and thefts involving a valuation of less than Rs. 10, except at the request of the informants. The beneficial effect of these rules was apparent in so far as reports of burglaries increased since 1892 from 68,124 to 98,565, and investigations fell from 42,368 to 30,462, whereas decisions rose from 6,598 to 10,369 and convictions from 5,218 to 8,816. The gravest feature of the year's working was an increase from 197 to 288 in reports of dakaiti, accompanied by a rise from 867 to 922 in those relating to robbery with or without hurt, and from 35 to 47 in those affecting murders by robbors. Under the heading of receipt of stolen property, there was an increase from 5,112 to 6,033. This recrudescence of violence and dishonesty was only to be expected in a period of scarcity. The police succeeded in breaking up three gangs of dakáits, who, it was remarked, exhibited less proneness than heretofore to the use of fire-arms. The general percentage of convictions against reports of heinous crime advanced from 45 to 49 and disclosed special improvement in murder (48 against 42) together with robbery (49 against 41) and kidnapping (63 against 58). Proceedings with a view to taking security for good behaviour affected 2,675 persons as against 2,302, and out of these 2,193 as against 1,867 were ordered to give security. The number of cases relative to security to keep the peace rose from 2,867 to 3,131 and that of persons so bound over from 2,502 to 2,533. Some disinclination on the part of individual Magistrates to utilize these sections was still apparent; but cases investigated under section 110

Heinous crime.

Preventive mea-

under orders of the Court increased from 450 to 637, and those initiated by Magistrates suo motu under section 107 from 148 to 282. Little advance was observed in the expunction of superfluous entries of time-expired convicts from the registers; but there was a perceptible improvement, an enhancement of which may be expected with the progress of the anthropometrical system, in the ascertainment of previous convictions, while the arrest of absconded offenders disclosed a considerable increase over the returns for the year preceding.

The sanctioned strength of the Provincial Police force increased from 18,886 men and 4,705 officers to 20,393 men and 5,311 officers. Out of the total of 25,704, the Railway Police, exclusive of which the Report of the Police Committee fixed the requirements of the Province at 25,467, absorbed 743, while 7,301, as compared with 7,477 recommended by the Report in question, belonged to the armed branch. The Government decided to abandon the existing practice of placing the armed branch entirely under the control of one of the two Deputy Inspectors-General in favour of a scheme providing for the territorial distribution of all duties between these officers. An increase of Rs. 62,000 since 1891 in expenditure on the Municipal Police numbering 6,700 arose mainly from an improvement in pay in accordance with the Police Committee's proposals. The main questions affecting the 88,568 Rural Police employed in these Provinces were the revision of emoluments and circles in Oudh and the introduction of the cash-pay system in the districts of Gorakhpur and Basti. The expenditure from General Revenues on the entire Police force was reduced, owing to exceptional measures in view of the financial embarrassment, from Rs. 71,43,732 to The satisfactory decrease, noticed in last year's report, in ${
m Rs.}\,\,70,\!27,\!163.$ the number of resignations as an index to discipline in the Provincial force continued in the shape of a further reduction from 697 to 648. tions, however, increased from 570 to 593 and dismissals from 471 to 555. The Government noticed with disapprobation the numerous cases of hasty and ill-considered punishments involving injustice to individuals and an impression of insecurity to the force. Punishments in the Rural Police further decreased from 6,710 to 6,083, whereas Rs. 26,395 as against Rs. 22,662 were earned as rewards. Three charges of police torture, of which two terminated in conviction, were investigated by the Courts, which in no case commented adversely on procedure as distinguished from misconduct, though notice was taken by Government of the failure of individual District Superintendents to periodically examine their subordinates. The new tests of police working, based on statistics of serious cognizable crime only, disclosed a perceptible improvement in the efficacy of investigation, in so far as the percentage of persons convicted to those involved in cases decided was 74.0 to 71.5. Some measure of success attended the experiment of enjoining the submission of reports by the unpaid agency of village headmen, distinguished in virtue of office by exemption from certain restrictions of the Indian Arms Act, 1878, with respect to a sword.

In connection with cattle-theft there was greater police activity in 1895 than in the preceding year, and the results, from a police point of

The Police force.

Discipline and efficiency.

Cattle-theft.

view, were better in every respect. The number of cases reported was 5,965 against 4,539 in 1894, the number brought before a Magistrate was 2,908 against 2,211, and the percentage of cases convicted to those disposed of was 79.70 against 75.95 in 1894. The system of professional cattle-lifting and illegal blackmailing, however, still flourished in many The improvement which has of late taken place in the relations between the frontier police of the Native States bordering on the districts of the Agra Division and the British police greatly tended to check cattle raids on the border. Cases of cattle-poisoning increased from 100 to 290, and of cattle-flaying from 11 to 34. The increase was attributed to a greater demand for hides. Arsenic was the poison most commonly used, and the police failed to discover how the poisoners obtained their supply of arsenic. The question of controlling the sale of arsenic by legislation was under the consideration of Government. The voluntary registration of sales of cattle at public and private marts and at police stations made good progress, and, though not primarily intended as a means of detecting cattle-theft, did in fact lead to such detections in some districts. The marked increase in dakaiti as the result of high prices consequent on insufficient rainfall has already been noticed. A decrease in the professional type of dakáiti, undoubtedly attributable to the dissolution of gangs under pressure of energetic pursuit, was indicated by the circumstance that, whereas 42 persons in 65 occurrences accompanied by the use of fire-arms were convicted in 1893, the year under report disclosed only 36 such occurrences in which 14 persons were punished. Attacks, moreover, by armed gangs on houses and villages, which had already decreased from 65 to 45 in 1894, were further reduced to 34. Dakáiti attended by murder decreased from 17 to 8. Similarly, though there was an increase of 65 in the aggregate of robberies, the number of such outrages committed by armed men diminished from 11 to 4. Cases of robbery, in which members of criminal tribes were convicted, rose from 38 to 44. Reports of professional poisoning increased from 40 to 46 and resulted in 20 against 16 convictions. Out of six cases involving the death of victims, the most notable was the murder of four pilgrims by a youth of 16, whose confession disclosed that he had already acted as a tool for the older members of a confederacy by administering poison with a view to robbery in no less than five districts in addition to similar operations in the Central Provinces and a Native State.

Dakaiti, robbery,

and poisoning.

INFANTICIDE.

On the 1st April 1895 the Act was in force in 567 villages in 20 districts with a total population of 86,692. The population under the age of six consisted of 7,211 boys and 5,122 girls. On the 1st April 1896 the juvenile population under six years of age, on the result of births, deaths, removals of families and transfers, stood at 6,900 boys and 5,245 girls. The proportion of boys to 100 girls fell to 131, as against 140 at the beginning of the year. The disproportion between the sexes was much less marked among the children under three years of age, and this was the direct effect of the Act, as many villages at present under it were proclaimed three years ago, and had at the time of proclamation about one

GENERAL SUMMARY.

CRIMINAL TRIBES.

Criminal communities, actually proclaimed under Act No. XXVII of 1871, were, as before, three in number:—

I.—Sanauriahs of Lalitpur.

II.-Barwars of Gonda.

III .- Sansiahs of Muzaffarnagar, Meerut, Muttra, and Aligarh.

The number of Sanauriahs on the registers decreased from 85 to 77; and, of these, the proportion engaged in cultivation diminished from 28° to 24; while no less than 30 were absent without passes, and 3 were in prison. Except as an immediate restraint upon the commission of offences in these Provinces, the surveillance of this community has never been really effectual, inasmuch as the greater number of its members are uncontrolled across the borders. The Barwars of Gonda, whose hereditary profession like that of the Sanauriahs consists in petty pilfering, numbered 4,067 on the registers, of whom 614 were absent without passes and 239 in prison. The failure of a series of harvests acted as a potent incentive to absconding; but police activity induced the fugitives, who availed themselves largely of the facilities afforded by railway communication, to transfer the field of their operations to other provinces. The Sansiahs, whose addiction to robbery with violence renders them the most important of the criminal communities, had 1,528 on the registers, of whom 850 were absent without passes and 73 in prison. Three main processes of reclamation have hitherto been attempted since their proclamation at the close of 1890. In the first place, of those supposed to be most amenable to civilizing influences 725 were "planted out" in 1890 with their families as cultivators under the supervision of selected landholders. During the year under report, the numbers of those settled on this principle were reduced to 131, of whom only 24 were engaged in agriculture and the residue employed as Municipal sweepers and jail warders. In the second place, those regarded as more hardened offenders were interned with their families in a reformatory settlement established under section 18 of the Act at Sultanpur. The number of those so interned still amounted to 403. In the third place, a Reformatory School was established at Fatehgarh for the reception of juvenile inmates of the Sultanpur Settlement, either with the consent of parents or as a punishment for breaches of discipline. There were 71 inmates at the close of the year. The experience derived from five years' working subsequently induced the Government to close the settlements at Sultanpur and Fatehgarh and to transfer the inmates to an agricultural colony in the Kheri district. Besides the communities actually proclaimed, the Doms of Gorakhpur and the Haburahs of Moradabad were under observation in settlements supervised by Government officials. These tribes of nomads are criminal only in the sense of furnishing a larger percentage of offenders than other communities. The success attained in reclaiming the Doms was very trifling; but the Haburahs, though severely tried by scarcity, held out some promise of stability.

Doms and Haburahs.

CRIMINAL JUSTICE.

Offences and convictions.

The number of offences reported in the North-Western Provinces increased from 154,006 to 157,347 and those returned as true from 121,993 to 125,091, whereas those brought to trial rose from 107,431 to 110,612. In Oudh the number of offences reported advanced from 52,205 to 55,136, while those returned as true increased from 38,864 to 42,066 and those brought to trial from 38,971 to 42,722. ber of persons brought to trial in the North-Western Provinces decreased from 180,162 to 177,734, while those convicted increased from 91,916 to 97,204. In Oudh the number of persons under trial increased from 68,683 to 72,109 and those convicted from 32,270 to 36,635. to their bearing on the administration of justice, these figures were satisfactory as showing a decided improvement in the discrimination exercised in the issue of processes. The legal disability of 3rd class Magistrates to exercise the powers conferred by section 203, Criminal Procedure Code, must continue, in the absence of legislation, to necessitate the formal trial of a certain proportion of groundless charges. The increase in crimo was directly attributable to the pressure of the prevailing scarcity, inasmuch as it was most pronounced under nearly all the heads of offences against property with or without violence. In the North-Western Provinces, for instance, cases of theft alone increased by 2,184 and robberies and dakáitis by 38; whereas the minor offences of violence disclosed a decrease of 1,113 under "hurt" and of 510 under "assault." There was indication of decided improvement in the judicious working of the provisions of section 560, Criminal Procedure Code, which enable the Courts to award compensation to persons harassed by frivolous and vexatious complaints. In the North-Western Provinces, 834 against 787 persons were ordered to pay Rs. 17,831 against Rs. 17,772, while in Oudh 510 against 630 per sons were ordered to pay Rs. 14,060 against Rs. 12,853. The Honorary Magistracy assisted the administration of Criminal Justice to the extent of disposing of cases involving 50,593 persons against 49,213. In the North-Western Provinces their assistance was generally acknowledged to be efficient; but in Oudh a decline from 37.72 to 35.14 in the already low percentage of convictions in the Courts of Honorary Magistrates sitting singly was the subject of remark. Courts of Session decided 2,831 against 2,504 cases affecting 4,804 against 4,500 persons, with the result that, at the close of the year, 236 against 281 cases, involving 415 against 547 persons, were pending. The total number of persons convicted was 3,131 against 2,843 and, while the percentage of persons convicted decreased from 65 to 64 in the North-Western Provinces and rose from 65 to 66 in Oudh, the mean duration declined from 42 days to 39 and from 55 days to 49, respectively, thereby disclosing a very distinct improvement on the returns of 1894 according to which the average trial occupied 46 and 74 days before it was decided. The jury system was in force in the North-Western Provinces at Allahabad and in Oudh at Lucknow. For the two Provinces the number of jury trials increased from 153 to 161: but the persons with respect to whom the Judge disapproved of the verdict declined from 27 to 26, all of whose cases were referred under section 307, Criminal Procedure Code. The remaining

Unpaid M agistrates.

Courts of Session.

Juries and Assessors. trials before the Courts of Session were conducted by the aid of assessors. The total number of cases increased from 2,032 to 2,424. With respect to 2,333 persons against 2,160 in the North-Western Provinces, the Judge agreed with the epinion of all the assessors; and in the case of 357 against 342 he differed with one or more; while as regards 505 against 404 he differed with all the opinions returned. In Oudh the Judge agreed with the opinions returned in 373 cases as against 369, but differed with one or more assessors in 56 as against 42 and with all in 100 as against 64. In connection with the question of punishments, it was noticed in last year's report that Native Magistrates were still reluctant to pass sentences of whipping with the obvious result that persons, who would suffer no degradation from this form of penalty, become contaminated by jail life and the additional consequence that prisons are overcrowded to the detriment of the health of inmates and the finances of the administration. In the year under report some improvement was perceptible; for the total number of whippings increased from 6,153 to 7,581, representing a rise in the percentage on possible cases from 22.56 to 25.38 for the North-Western Provinces, and from 2,640 to 3,426, representing a rise from 25:26 to 27:35 The total number of appellants in the North-Western Provinces increased from 19,136 to 21,666 and disposals from 18,458 to 20,684, leaving 982 persons awaiting trial as against 678, and an average duration of 26 days as against 18. In Oudh the number of appellants increased from 5,739 to 6,359, out of whose cases 6,116 as against 5,532 were decided, leaving 243 under trial as against 207, and an average duration of 18 days as against 22. In last year's report comment was made on the high percentage of cases in which the appellate Courts considered it necessary to interfere as indicating room for improvement in the working of inferior tribunals. In the year under report there was a perceptible advance inasmuch as the percentage of convictions affirmed was 72.6 as against 69.3 in the North-Western Provinces, and 74.1 as against 73.5 in Oudh.

Punishments.

Appeals.

JAILS

The number of persons of all classes in prisons, including subsidiary jails and lock-ups, was 142,910. Admissions increased from 98,982 to 113,689 and discharges from 96,570 to 110,595. The resultant balance at the close of the year was 32,315. The daily average rose from 27,947 to 32,667. The number of convicted prisoners admitted direct, which had been only 32,969 in 1885, again increased from 42,278 in 1894 to 48,895 in 1895. These striking figures had their origin in the privations to which the poorer classes were exposed as the result of the prevailing scarcity; for convictions against females increased from 2,922 to 4,033, out of which nearly 3,000 were for minor offences against property, while 2,625 involved sentences not exceeding three months, and in only 258 a previous conviction was established. The Government, partly in view of these circumstances, directed inquiries preparatory to submitting proposals in the direction of legislation in the spirit of the Probation of First Offenders Act. The immediate result of this influx of prisoners was a serious overcrowding, which the opening of a temporary jail in the Chunar Fort was

Population.

Accommodation.

inadequate to relieve. The capacity, other than hospital and cellular,

was for 29,275 convicts only, whereas the average daily population was 30 575 and the greatest number confined on any one day was 35,210. The working of the mark rules, though bearing excellent results, was capable of closer supervision in respect to the allotment for special diligence. The proportion of convicts of each of the four principal religions . was closely similar to the ratio of each of these denominations to the aggregate inhabitants of these Provinces. A perceptible increase in average severity of punishment inflicted by the Courts was indicated by a rise, from under 27 per cent. in 1885-87 to over 40 per cent. in 1895, in the ratio of convicts sentenced to death or transportation or imprisonment exceeding six months. Partly owing to the exhaustion of accommodation at the Bureilly Reformatory, the number of juvenile inmates rose from 145 to 210 for males, while females of the same class advanced from 69 to Punishments for prison offences rose from 9,602 to 10,681; but those classified as major fell from 1,412 to 1,383; and the percentage of these punishments, which had been 30 in 1892 and 21 in 1893, was further reduced from 14 to 12. The remarkable lightness of the incidence in these Provinces of minor punishments, amounting to '3 as against 2'3 in Bengal, was the subject of special inquiry with regard to the question whether undue leniency of prison routine was in any respect responsible for the persistent increase in the prison population. The total expenditure, exclusive of that incurred to the extent of Rs. 1,39,533 for construction and repairs, rose from Rs. 10,94,660 to Rs. 12,73,752; but the cost per head was slightly reduced from Rs. 39-8-0 to Rs. 39-3-7. Though a saving of Rs. 88,382 was effected in dietary charges by the system of grainstorage, the amount required was considerably under-estimated in six district jails; and a judicial inquiry elicited that the prisoners at Moradabad had been fraudulently underfed by the jailor and his subordinates. number of convicts employed on manufactures increased from 9,104 to 11,331, and the net cash earnings from Rs. 2,10,338 to Rs. 2,39,740, giving an average of Rs. 21-2-0 as against Rs. 23-1-0. An impetus was given to these industries by the issue of Government Orders directing all Heads of Departments to purchase from the jails, at rates following those of the open market, all articles required for the public service and manufactured by prison labour. A proposal for the concentration of industries by steam power at the Fatehgarh Central Prison was under consideration. The death rate per mille decreased from 32.27 to 27.45; but the daily average of sick prisoners, which had been 33.52 in 1893, rose from 42.26 to 57.93, mainly owing to the admission of persons in the last stages of emaciation in famine-stricken districts. The death rate at Moradabad, however, which rose from 34.04 in 1893 and 45.33 in 1894 to 137.07 in 1895, was attributed by the Government to the dishonest underfeeding

by the prison staff. A series of experiments was undertaken with a view of ascertaining the most effective and economical type of cubicle to be constructed in sleeping barracks in accordance with the policy approved by the Secretary of State. The Local Committee of the Discharged Prisoners' Aid Society rendered excellent service in investigating cases submitted; and inquiries elicited that most of the discharged prisoners

assisted by grants-in-aid had not relapsed into criminal habits.

Discipline.

Financial aspects.

Health.

The Bareilly Reformatory.

The Reformatory School at Bareilly had accommodation for 232 inmates exclusive of 24 in the hospital. The year opened with a population of 204, increased by 77 admissions to a total of 281. One inmate was transferred to a lunatic asylum. There were one death and one escape; and, as discharges amounted to 35, the resultant population at the close of the year was 243, with a daily average of 221.58 as against 207.87. In consequence of this pressure on accommodation, the Government was constrained to postpone further admissions and to take into consideration the question of extension. The health of the inmates was, on the whole satisfactory. The conditions precedent to an order of detention were better understood by the Courts; and instructions, directing the discontinuance of the admission of members of the criminal community of Daleras, should facilitate the maintenance of proper discipline. Though there was a marked improvement upon the serious insubordination noticed in last year's report, there was still a heavy schedule of thefts, and a bad spirit was evidenced by attempts to obtain admission to the hospital by self-inflicted injuries. The occurrence of an escape resulted in additions to the warder establishment. While the total expenditure increased from Rs. 8,826-10-4 to Rs. 9,516-11-3 owing to the inflated population, the cost per head was only Rs. 42-15-0 as against Rs. 42-7-4, and the cash profit from the farm and factories rose from Rs. 534-14-2 to Rs. 1,012-11-1. The rule requiring each inmate, in the interests of his physique, to engage in field labour in addition to a second industry was justified by the circumstance that most of those discharged adopted agriculture as a livelihood. Out of 83 inmates discharged since the opening of the Reformatory School only two were known not to be earning an honest livelihood; and the issue of instructions directing inquiries after release by superior Revenue officials instead of the police will, it is anticipated, facilitate the collection of data with regard to subsequent history by removing the principal reason of aversion to inspection.

Behaviour after release.

CIVIL JUSTICE.

Civil Suits.

Institutions of suits in the North-Western Provinces increased from 89,180 to 92,095, and the total for disposal from 102,145 to 106,205. Disposals, however, advanced from 90,156 to 96,345; and the pending file diminished from 11,989 to 9,860. The average duration of contested cases fell from 82 days to 79 and, in the case of Small Cause Courts, from 47 days to 37. The increase in institutions was partially explained by an apprehension that the Supreme Legislature contemplated an enactment limiting the decretal amount of interest to that of principal. In Oudh institutions increased from 55,939 to 57,580, and the total for disposal from 66,255 to 68,572. Disposals increased from 56,306 to 57,120; and the pending file rose from 9,949 to 11,452. The average duration of contested cases, which had been 81 in 1893 and 85 in 1894, again increased to 90.

Original suits.

days. In last year's report a rise under this head in the Courts of Subordinate Judges from 52 days to 102 was the subject of comment. the year under report the figure had again declined to 49. The most striking feature was a decrease from 19,818 to 15,936 in the institution of ordinary suits, more than counterbalanced by an increase from 36,121 to 41,644 in small causes, as the result of the considerable extension in 1894 of the Small Cause jurisdiction of Munsifs with the object of relieving Subordinate Judges of petty original business in order to enable them to afford greater assistance to the District Judges in the disposal of Munsifs' appeals and the trial of original suits of high valuation. In Kumaun institutions increased from 4,921 to 5,548, and the total for disposal from 5,535 to 6,073. Disposals rose from 5,010 to 5,541, with the result that the pending file increased from 525 to 532, and the average duration in contested suits from 55 days to 60. The increase in institutions chiefly arose from the operation of the revised rules requiring certain cases hitherto treated as Revenue to be classified as Civil.

Appeals from de-

The number of appeals from decrees for the disposal of Courts in the North-Western Provinces other than the High Court fell from 16,017 to 14,064, whilst disposals were 9,927 as against 10,824, leaving a pending file of 4,137 as against 5,193 in the year preceding. The average duration of appeals before Subordinate Judges rose from 100 days to 182, whereas, in the Courts of District Judges, it decreased from 242 days to 194. Oudh the number of appeals for disposal before Courts subordinate to the Judicial Commissioner decreased from 5,918 to 4,375, and disposals from 3,763 to 3,106, leaving a pending file of 1,269 against 2,155. The average duration was reduced in the Courts of Subordinate Judges from 148 days to 128, and in those of District Judges from 412 days to 324. In Kumaun the appeals for disposal before all Courts rose from 373 to 502, but disposals increased from 330 to 459; and, while the pending file stood at 43, the average duration advanced from 19 days to 48. The increase of appeals from 105 to 175 in Almora, and from 89 to 172 in Garhwal, coupled with the circumstances that appeals in Naini Tal were only 52 as against 53 and that those to the Commissioner declined from 127 to 102, was the result of the revised rules providing the outlying districts with a local tribunal for appeal in the Deputy Commissioner's Court. The experiment was justified by the fact that the appellate Court felt itself constrained to interfere in one out of four decrees in Garhwal and in one out of five at Almora.

Execution of de-

The total number of applications for execution of decrees before the Courts in the North-Western Provinces increased from 89,035 to 91,488, and disposals from 69,240 to 77,924, representing a decrease from 19,795 to 13,564 in the pending file. The percentage of wholly or partially fructuous applications, which had been 49.2 in 1893, further decreased from 46.9 to 42.9, and realizations were reduced by Rs. 2,24,965. In Oudh the total number of applications for disposal increased from 48,235 to 51,886, and disposals from 39,674 to 41,837, leaving a pending file of 10,049 against 8,561 of the year preceding. The percentage of wholly or partially infructuous applications fell from 44 to 40, and realizations were reduced

by Rs. 9,582. In Kumaun the total number of applications for disposal decreased from 2,815 to 2,722, and disposals from 2,423 to 2,239, leaving a pending file of 483 against 392. The percentage of wholly or partially fructuous applications increased from 53 to 57; and realizations were reduced by Rs. 26,064.

The institution of first appeals in the High Court decreased from 844 to 728, and disposals from 358 to 297, leaving a pending file of 431 against 486, with an average duration increased from 597 days to 606. The institution of second appeals decreased from 2,732 to 2,395; and disposals, which had amounted to 2,060 in 1893, were further reduced from 1,564 to 516, leaving a pending file of 1,879 against 1,168, with an average duration reduced from 394 days to 361. The decrease in disposals of second appeals arose chiefly from the necessity of clearing off a number of difficult and intricate first appeals with regard to which, in previous years, the order according to date of institution had not been observed. The oldest pending cases were one first appeal from 1890, and one second appeal from 1892. The fifth Puisne Judge, whose appointment was necessitated in 1892 by the accumulation of arrears, continued to officiate. In the Court of the Judicial Commissioner of Oudh the institution of first appeals increased from 94 to 119, and disposals from 54 to 91, leaving a pending file of 195 against 167. The average duration was, in Civil appeals, 711 days against 728, and, in rent appeals, 612 against 1,206. The institution of second appeals increased from 632 to 942, and disposals from 354 to 416, leaving a pending file of 1,248 against 722. The average duration was, for Civil appeals, 349 days against 361, and, for rent appeals, 427 days against 400.

Appeals before the High Court and the Judicial Commissioner of Oudh.

REGISTRATION.

The accepted policy of substituting a departmental agency had the effect, during the tricnnium ending with the year 1895-96, of reducing the ex-officio sub-registrars to 54. The reorganization of the Registration Department in Oudh had the result of diminishing the total number of offices in the United Provinces from 337 to 289 and of officers from 337 to 293. Technical irregularities had delayed this long-needed process of consolidation, since they had necessitated the temporary reopening of 20 offices informally reduced as superfluous and the passing of Act No. IV of 1894 of the local Legislature to validate the registration of documents in illegally-constituted sub-districts. The total number of documents registered, as contrasted with the figures for the preceding triennium, increased from 619,560 to 664,435, and the annual average from 206,520 to 221,478. The total receipts advanced from Rs. 12,06,805 with a mean figure of Rs. 4,02,268 to Rs. 12,95,895 with a mean figure of Rs. 4,31,965, while expenditure increased from Rs. 6,37,365 with an average of Rs. 2,12,455 to Rs. 6,79,670 with an average of Rs. 2,26,557. The resultant increase in the departmental surplus from Rs. 5,69,440 to Rs. 6,16,225 or, expressed in the yearly averages for the two periods, from Rs. 1,89,813 to Rs. 2,05,408. The leading factor in conducing to this striking increase of registration was the series of indifferent harvests

Officers.

Operations.

xxxiv

Prosecutions.

followed by agricultural depression, as evidenced by a rise in transactions affecting immoveable property from 119,404 in 1893-94 to 139,454 in 1895-96, more especially where the valuation of the documents was less than Rs. 100, as indicated by an advance under this heading from 39,302 to 51,025. The average number of prosecutions under Act No. III of 1877 increased from 4 to 10. Out of a total number of 29, in addition to eight connected with registered documents but tried under the Indian Penal Code, no less than 21 ended in acquittal, with the result that, in order to ensure the proper scrutiny of cases before institution and their proper conduct at the trial, orders were issued to the effect that no prosecution should be initiated without the concurrence of the Registrar, and that the Government Pleader should in every instance be deputed by the District Magistrate to appear on behalf of the Crown.

STATE LITIGATION.

Results of State litigation.

The State was involved in 97 original suits, of which 41 were won and 8 were lost. In the appellate Courts, the State succeeded in 8 cases and was defeated in 5, with regard to 4 of which second appeals were entered. Out of seven references decided under the Land Acquisition Act, the Collector's decision was sustained in 3 cases and enhanced in 4, inclusive of two awards aggregating Rs. 4,809-13-9, but increased, under a compromise in the High Court, to Rs. 15,216-14-4. The Courts decreed 98.1 per cent. of Rs. 55,630-15-6 claimed by the State and 3.9 per cent, of Rs. 69,242-12-1 claimed against it. The Court of Wards was party to 98 cases decided, out of which it was successful in 86 and defeated in 12, including 3 decisions reversed on appeal. The Court obtained decrees for 75.1 per cent. of its claims aggregating Rs. 59,057-6-3, and was cast in 6.21 per cent. of Rs. 5,09,953-6-8 claimed against it. Out of a total demand of Rs. 2,21,411-6-6, only Rs. 20,637-14-9 were recovered, representing a percentage of 9.3 as against 11.5 in 1893-94 and 23.6 in 1892-93. In pauper suits a sum of Rs. 50,085-14-11 was under realization, of which Rs. 6,034-9-3 were recovered, thus reducing the percentage from 15 to 12. The ratio of amounts written off decreased from 39 per cent. to 37, and that of the outstanding balance for realization rose from

Court of Wards.

Realizations and Pauper suits.

VOLUNTEERS.

Strength.

The number of corps remained the same as in the previous year, but the total number of active members increased from 3,864 to 3,942. The number of reservists fell from 735 to 662.

Efficiency.

The percentage of efficients to the total strength was satisfactory, except in the case of the cavalry, in which branch the percentage fell from 82.09 to 78.10. In the Infantry the percentage rose from 72.69 to 76.75: and in the reserve force it was 81.47.

Finance,

At the close of year, the funds of every corps were in a satisfactory condition: the total balance at credit amounted to Rs. 20,133.

GOVERNMENT PRESS AND BOOK DEPÔT.

The receipts amounted to Rs. 64,458 as compared with Rs. 66,658 in the previous year, and the expenditure to Rs. 3,41,361 as against Rs. 3,99,594, exclusive of charges for stationery. These charges amounted to Rs. 2,69,514 against Rs. 1,34,720 in 1894-95, and were unusually high, owing partly to comparatively small purchases in the previous year and the necessity of replenishing the stocks. The nominal profit was calculated to be Rs. 1,03,316 as compared with Rs. 84,321 in the previous year, the estimated value of the year's outturn being Rs. 6,96,679.

The maintenance of the Book Depôt cost Rs. 3,975 and the realizations amounted to Rs. 12,946.

PART I.

CHAPTER I.

PHYSICAL GEOGRAPHY.

Sketch of Meteorology.

THE more important features of the weather in the North-Western Pleva inces and Oudh and adjacent tracts during the year 1895 were—

- (a) an unusually wet and prolonged cold weather followed by a cool and showery spring, April being especially cool;
- (b) a short, but very intense hot weather, May being about as much hotter than usual as April was cooler;
- (c) a monsoon current much weaker than usual, especially during July and September;
- (d) the very early retreat of the mousoon currents from Upper India, about the middle of September, followed by fine and very dry weather during the remaining months of the year.

The mean temperature of the year in the North-Western Provinces and Oudh was approximately normal, the variations from normal at the various stations being in general less than 1°. In the parts lying to the west of these Provinces, the mean temperature for the year was more or less in excess. The maximum deviation from the normal was $+2^{\circ}$ at Sirsa.

In January the mean temperature was under the average everywhere except in the south-east districts of the North-Western Provinces and at the Central India stations, where excesses ranging from 0.3° to 1.6° were obtained. February was abnormally warm everywhere, except at Lucknow and Benares, where slight defects were reported. The excess was, however, nowhere large, the greatest being 3.7° at Sirsa. March was in general a cool month, except at Sirsa and on the hills. April was cooler than usual, the defect from normal ranging from 0.3° in Rajputana to 4.6° in the southcastern districts of the North-Western Provinces. Ajmere and Sirsa, however, were warmer than usual during this month. May was exceptionally hot. The mean at many stations was as much as 4° or 5° above the normal. At Sirsa the excess was 7°. In June excesses and defects appeared somewhat irregularly, the variations from normal being conditioned largely by the rainfall distribution. The earlier part of the month was more or less hot, but after the 11th a general fall in the temperature appeared, and was maintained with slight variations up to the close of the month. On the whole the month was cooler than usual, but the defect was much more marked on the plains than on the hills. The Rájputána stations alone, owing to deficient rainfall, recorded higher temperature than usual. In July, the mean temperature was slightly to considerably in excess at stations in the south and west, and approximately normal in Kumaun and along the foot of the hills. This excess was chiefly due to a prolonged break in the rains during the month. August was cooler than usual on the hills and on the submontane tracts, but warmer elsewhere, especially in Raiputána. The general cossation of the rains during the second week of September with the accompanying clear skies and hot sun gave in general much higher temperatures than are usually reported in this month. This was particularly so at the western and south-western stations of these Provinces, as also in Rajputana. Some of the Himálayan, Sub-Himálayan, and Oudh districts, however, recorded temperatures approximately normal. The mean excess for the whole Province during this month

was about 1° above the average. In October these Provinces were colder, and the Rájputána and Central India stations warmer than usual. November was exceedingly dry and warm. The average excess of temperature in the trans-Jumna tracts was about 5°, while over the hills and the adjoining plains it ranged from 2° to 3°. December was slightly colder than usual on the hills and on the submontane (east) plains, and warmer elsewhere.

Very high temperatures were recorded at most stations in the fourth week of May and in the first week of June, temperatures above 110° being very frequent. In July, September, and October maxima above 100° were unusually common, especially over Rajputana, Central India, and the Panjab. The highest readings in the North-Western Provinces and Oudh in each month during the period from May to October were—

```
In May at Jhánsi
                                                               ... 117.2° on the 26th.
In June at Benares
                                                                   112.3° on the 4th.
In July at Bareilly
                                                                   104.9° on the 10th.

```

The lowest temperature under shade on the plains of the North-Western Provinces and Oudh was 36.9° at Roorkee on the 22nd December, and the lowest on the hills, 25.6° at Chakrata on the 4th February. If the adjacent regions are included, Sirsa again appears excessive, its reading of 34.7° on the 15th January being the lowest plains reading during the year.

The mean pressure of the year was moderately above the normal on the hills and normal or in slight excess on the plains.

During January, pressure was about normal or in slight defect on the plains and in slight excess on the hills. In February, the barometer read higher than usual everywhere, and chiefly so on the hills. March was about normal on the hills and in slight defect on the plains. In April, pressure was about normal over the trans-Jumna regions and in moderate excess elsewhere. During May, the readings on the hills were in considerable excess, but much lower than usual on the plains. During June and July, pressure was in moderate to considerable excess, and in slight to moderate defect in August. In September, pressure was higher than usual everywhere, but more especially so in the hills. In October, the barometer changed rather irregularly, the western portion of the Province reporting slight defects, and the other parts slight excesses. Pressure in November was in considerable excess on the hills and in slight excess on the plains. December was about normal.

The following were the more important of the storms during the rainy season:-

- (1).—June 13th to 18th—a feeble storm formed in the Arabian sea and travelling along the coast line broke upon the Mekran coast and gave disturbed weather to parts of Rajputana and the South-West Panjab.
- (2).—June 18th to 22nd—a cyclonic storm appeared over the head of the Bay of Bengal, and passing about due westwards across the Peninsula, broke up in south-west Rajputana. Its influence over the weather of these Provinces was slight.
- (3).—June 28th to July 1st—a moderately intense cyclonic storm formed in the north-west angle of the Bay, travelled north-westwards through Orissa Chhota Nagpur, and South Bihar to the eastern and central

parts of these Provinces, and broke up at the foot of the hills north of Rohilkhand.

- (4).—July 17th to 21st—a feeble cyclonic movement formed off the Ganjam and Orissa coasts, and travelled up in a north-westerly direction through Chhota Nágpur to South Bihár where it filled up. It affected the weather of these Provinces to a small extent.
- (5).—July 28th to August 2nd.—This storm formed in the north-west angle of the Bay, moved up to these Provinces on the 31st and filled up to the north of Cawnpore on the 2nd August.
- (6).—August 5th to 10th—a disturbance of slight intensity formed on the 5th and 6th in the north-west of the Bay, and crossing the Orissa coasts on the 7th, advanced with unusual rapidity in a westerly direction to Sind, where it filled up on the 9th or 10th.
- (7).—September 15th to 20th—a cyclonic storm of some intensity originated in the Bay, and, moving through Orissa, Chhota Nágpur, South Bihár, and the eastern parts of the North-Western Provinces and Oudh, broke up in the hills north of Gorakhpur.

There were thus a fair number of storms throughout the rainy season, but as only a few of them passed over these Provinces, the rainfall of the season was neither heavy nor continuous.

The trough of low pressure, which usually lies along the south of the Gangetic plain, was in general much farther north than usual during the rains—a state of things which is always found associated with weak monsoon currents in Upper India and generally deficient rainfall.

The total rainfall of the year was somewhat below the average in all the divisions of these Provinces excepting Meerut, Fyzabad, and Gorakhpur, where small excesses were obtained. On the whole year's fall the variations from normal were comparatively slight; so much so, that the year might be called an approximately normal one. But if the rainfall of the year be considered under the two heads of the winter rains and the rains proper, it is seen that while the former were much more abundant and uniform than usual, the latter, the rains proper, were in general a good deal lighter.

In January the air was more humid, the sky more cloudy, and the rainfall more abundant than usual,—in some divisions twice the normal amount was received. falls of snow in the Kumaun-Himálayas were more frequent and greater in amount than is usually the case. In February, the percentage humidity of the air was higher, and the proportion of cloud less than usual. The rainfall was defective over Rajputana, the reporting part of the Panjab, the North-Western Provinces hill districts, and the Meerut and Benares Divisions. The remaining divisions reported excesses. The mean for the North-Western Provinces and Oudh was on the whole a little above the average. The snowfalls on the mountain passes north of Almora were heavier this month than they were in February 1894. In March both the humidity of the air and the amount of cloud was greater than usual, though the rainfall was less. April was an unusually wet month, the rainfall exceeding the normal everywhere except in the Allahabad Division. The falls of the month were chiefly due to thunder or dust storms. The chief rainy period was about the 18th. The snowfalls on the Kumaun Himálayas were stated to have been heavier than in the year 1894. The May rainfall was below normal at all the registering stations, excepting those in the Benares and Fyzabad Divisions, where dust or thunderstorms gave more showers than usual. The humidity of the month was about normal and the amount of cloud less than usual. The snowfalls averaged six inches in the higher passes of the Kumaun hills.

The rainy season began in June about the usual time. The air was more humid and the sky more clouded than usual during that month. The rainfall was abundant everywhere, and especially so in the central and western divisions of these Provinces, where about double the usual amount was registered during the month. July was

drier than usual almost everywhere throughout the North-Western-Provinces and Oudh, and also markedly so in Rajputána. The principal rainy periods were during the first and the last weeks of the month, the second and the third weeks being almost entirely rainless. The rainfall during August was about average in amount and well distributed over the reporting area. In September practically no rain fell in Rajputána; and little or no rain fell over the southern, central, and western districts of these Provinces after the 10th or 11th. The eastern districts, however, received heavyish rainfall during the advance of a cyclonic storm on the 20th. More than twenty raingauges within the area affected registered rainfalls exceeding 5"—one at tahsíl Mahárajganj, in Gorakhpur district, reported 10·40". Defects in the season's total appeared in all divisions except Fyzabad, which showed a 10 per cent. excess, and Meorut, which had a 20 per cent. excess. The largest defects in the season's rainfall were in the Lucknow and Agra Divisions, where the defects were above 14 per cent. of the normal fall. The remaining three months of the year were almost entirely raifless, November on the plains being completely so.

7.—CHANGES IN THE ADMINISTRATION.

[See General Summary.]

8.—RELATIONS WITH TRIBUTARY STATES AND FRONTIER AFFAIRS.

In September 1894 it was brought to the notice of the Local Government that two British subjects living on the frontier between Thibet and British territory, in the Almora district, had been imprisoned by the Thibetans. Their release was, however, procured through the kindly offices of Major-General G. N. Channer, V.C., C.B., who at the time happened to be touring near the Mansarowar lakes in Thibet. It was also represented that the Thibetans were guilty of other depredations, viz. levying illegal taxes from British subjects and destroying the forests in British territory. Measures were accordingly taken to place the administration of these outlying tracts on a proper footing, and with this view a party of 30 Gurkhas under a British officer was sent up to Darchula, on the frontier, for the winter months; and a Native agent and reporter were appointed to represent British interests in the locality, and to keep the authorities informed of the progress of events. Orders were also issued that the tracts in question should be visited by the Commissioner or Deputy Commissioner, and matured proposals submitted for putting an end to the malpractices complained of. A further report was received in August 1895, from which it appeared that the dues levied on British subjects by the Thibetans were fixed and recorded in the settlement engagements; that the trade of the Bhutias with Thibet depended on their payment; and that the people were quite content to pay them. It was thereupon decided that the best arrangement for the present was that Government should undertake the collection and payment of these dues to men to be deputed in October each year by the Thibetan authorities; and that the question of continuing to record these dues. in the settlement papers should be considered when proposals were submitted for the revision of settlement in the Almora district. The entertainment of a subordinate official, with a staff of peons, for the collection of the said dues, was sanctioned for one year subject to report as to the working of the new arrangements at the end of that period.

CHAPTER II.

ADMINISTRATION OF THE LAND.

I.—SURVEY AND SETTLEMENT.

North-Western Provinces and Oudh.

The report for last year contained a short account of the alterations made in the system of settlement, the most important of which consists in the separation of the work of assessment from that of preparing a corrected record-of-rights, and the introduction of a scheme for the systematic revision of the land record by the permanent agency of the Land Records Department. It has since been decided to limit the record operations to the correction of the annual papers, without attestation under the settlement rules, or the preparation of a new record-of-rights. The procedure in force is described in the following extract from the general instructions issued for the guidance of survey and district officers.

"In the scheme for the revision of records, the main principle is that no settlement record shall be prepared. The only exception to this is that, in Meerut, the khewats, or record of proprietary right, will be revised and attested in accordance with the provisions of the Land Revenue Act and the rules framed thereunder. In other respects, the work to be done is merely the annual correction of the village papers by the patwaris, performed with special care and under special supervision. The usual procedure, as laid down in the rules for patwaris and kanangos, will therefore be adhered to except in so far as any modification is required owing to the provision of new maps, and the special needs of the assessing officer. There will be no reclassification of tenures, or determination of questions of status, such as is made when a new record-of-rights is prepared. The decision of these questions will be left to the regular courts."

The progress of operations under the new system will be noted in the following chapter, which deals with the work of the Land Records Department. This section of the report will be confined to an account of the work done in those districts where a reassessment of the land revenue is being carried out.

The districts under assessment were the same as last year; three in the North-West Provinces and nine in Oudh. In only one of these—Budaun—is a record-of-rights now in course of preparation under the old system; and there also this work was discontinued for a time; but it was resumed under the orders of Government, as the existing rentrolls were considered to be untrustworthy. In Oudh, the system of assessing on existing rentrolls was in full operation; and in most districts the record work was limited to the completion of what had been begun before the new procedure was adopted. Under the guidance of the Settlement Commissioner great progress was made in Oudh in carrying out the operations of assessment. In the North-Western Provinces, the settlement of Garhwal has, by the good arrangements and energy of the Settlement Officer, Mr. Pauw, been practically completed. The following paragraphs give a brief account of the progress of work in each district:—

Bijnor.—Mr. F. J. Pert was appointed Settlement Officer during the year, and assumed charge on the 30th November 1894. The fairing of the records of parganas Daranagar, Bijnor, Mandawar and Akbarabad, and practically of pargana Kiratpur also, was finished. The maps of parganas Nehtor, Najibabad and Dhampur were corrected, and the attestation of records commenced when, under the orders of Government, it was decided to discontinue all but the attestation of the khewats. The

work in Nehtor was, however, completed, as only a few villages of this pargama remained to be attested. The Settlement Officer and Assistant Settlement Officer inspected four parganas with an area of 350 square miles. According to the programme, a fifth pargana, Mandawar, should also have been inspected; but this could not be done owing to the late date on which the Settlement Officer joined the district. Three of the parganas inspected and a portion of the fourth were assessed, making a total area of 305 square miles. The Settlement Officer explains that the assessment of the area inspected would have been completed, but for his deputation as Magistrato and Collector during the hot weather months, when he had to carry on the work of the district in addition to that of settlement. In this district the work of inspection and assessment is somewhat behindhand. It is being pushed on, and the full programme will be worked up to during the current year.

The survey of the forest villages in parganas Najibabad, Afzalgarh and Barhapura was, as noticed last year, conducted by professional agency under the supervision of Mr. Freeman, the officer in charge of survey operations in Meerut. The traverse survey of all the villages, comprising an area of 339 square miles, has been completed; and 162 square miles (73 in Najibabad and 89 in Barhapura) have also been surveyed cadastrally. The total cost of this work so far has been Rs. 4,044, or Rs. 24-15-5. per square mile, on the area cadastrally surveyed.

The cost of settlement operations during the year was Rs. 57,599; bringing the total expenditure up to Rs. 91,752, or Rs. 118-1-4 per square mile.

Budaun.—The work of map and record correction was practically finished during the year; and that shown as remaining relates to the alluvial maháls in the Dataganj tahsíl, which have been removed from the regular operations of the settlement. The new records of tahsíls Sahaswan and Bisauli, and of portions of parganas Salempur, Budaun and Ujhiani were attested. The fairing of records was completed for the Gunnaur tahsíl, and is in progress in tahsíls Bisauli and Sahaswan. The Settlement Officer and his assistant inspected an area of 768 square miles, leaving the Budaun and Dataganj tahsíls for inspection during the current year. The area assessed was 332 square miles; and the revised assessments of one pargana, Asadpur, were reported for sanction towards the end of the year. The total cost so far is Rs. 1,83,263, of which Rs. 94,491 were expended during the year. The rate per square mile comes to Rs 91-7-2.

Gurhwal .- The Garhwal survey party was broken up at the commencement of the year; and the only work connected with survey was the correction and final completion of the maps as correction slips were received from the Settlement Department. The fairing of records was completed, except the preparation of copies for the patwaris, a good many of which were not ready at the close of the year. The work of inspection and assessment was energetically pushed on. The Settlement Officer inspected the parganas of Dewalgarh, Talla Salan, Ganga Salan and Chandpur, and the pattis in pargana Badhan which were cadastrally surveyed. The assessable area of these is 579 square miles. These parganas were also assessed, as well as the remaining portion of Malla Salan, and the total area assessed in the cadastrally surveyed tract was 603 square miles. The small area of 47 square miles remaining has been assessed since the close of the year. The Settlement Officer has also finished the inspection and assessment of the unsurveyed portion of the district, the total number of villages in which is 653 with an assessable area of 38 square miles, scattered over a great extent of very mountainous country.

The assessment reports of parganas Malla Salan, Talla Salan, Ganga Salan, Dewalgarh and Badhan were received during the year; and the revised assessments of pargana Chaundkot were sanctioned and declared. The demand for this pargana has been raised from Rs. 7,132 to Rs. 10,835, an increase of Rs. 3,703 or 51.92 per cent. on the old revenue. The revised assessments of the remaining parganas were

sanctioned after the close of the year. The total expenditure up to 30th September 1895 was Rs. 4,90,038. Of this Rs. 60,841, or Rs. 35-4-11 per square mile was spent on the traverse; Rs. 2,60,190, or Rs. 273-9-6 per square mile, on the cadastral survey; and Rs. 1,69,007, or Rs. 170-14-2 per square mile, on settlement. The work remaining to be done will, it is expected, be completed by the end of the current financial year.

Lucknow.—The reassessment of the district was completed during the year by the inspection and assessment of the six remaining parganas, the area of which is 814 square miles. Assessment reports were submitted for all the parganas; and, since the close of the year, the revised assessments have been sanctioned. The increase of revenue for the entire district is, in round numbers, Rs. 2,20,000, or 28 per cent. on the current demand. The expenditure during the year was Rs. 28,330, which, added to the expenditure incurred up to the end of the previous year, gives a total cost of Rs. 50,143, or Rs. 51-13-8 per square mile.

Unao.—The resettlement of this district also has been completed. The small amount of record work that remained over from last year was finished; the remaining pargana, Mohan Auras, was inspected; and 404 square miles were assessed. The revised assessments of ten parganas, were sanctioned and declared during the year.* The new revenue for these is Rs. 5,47,063, an increase of Rs. 84,608, or 18:30 per cent. on the current demand. This completes the assessment of the entire district; and in eleven parganas the settlement has been formally closed by notification.

The total expenditure up to the close of the year under report amounted to Rs. 3,39,139, or Rs. 205-6-8 per square mile. The expenditure is very high. It has not been explained by the Settlement Officer; but it is due principally to the protracted operations, and the settlement could probably have been made in a shorter time, and with greater economy, if a separate Settlement Officer had been appointed.

Rae Bareli.—The revision and attestation of records have been finished for the entire district; all that remained being the fairing of some of the records. Very satisfactory progress was made with inspection and assessment. The Settlement Officer and his assistant inspected an area of nearly 1,000 square miles during the year, thus completing the inspection of the district. The area assessed was still larger, viz., 1,740 square miles. This includes four parganas, which were inspected in 1893-94, but the assessment of which was unavoidably delayed by the Settlement Officer's absence on other duties. The Settlement Officer submitted the assessment reports for parganas Inhauna, Mohanganj, Sareni, Khiron, Rae Bareli, Simrauta and Dalmau; and the revised assessments of the first four have been sanctioned and declared. The total enhancement in these is Rs. 67,885 or 22-7 per cent. on the old demand.

The cost of settlement operations during the year was Rs. 64,977. The total expenditure from the commencement of settlement is Rs. 1,94,919, or Rs. 111-7-2 per square mile.

Sitapur.—The Settlement Officer inspected twelve parganas with an area of 1,110 square miles, and completed the assessment of 766 square miles. The revised assessments of 323 square miles only have, however, been reported. The Settlement Officer explains that the year was one of such acute agricultural depression that he considered it advisable to delay reporting the assessments of the grain-rented parganas until he could satisfy himself by another rapid inspection that he had not underestimated the assets. The expenditure during the year was Rs. 19,629. The cost rate calculated on the total expenditure of Rs. 41,834 comes to Rs. 18-8-10 per square mile of the total area. On the area inspected the rate is Rs. 17-10-11, and on the area assessed Rs. 24-8-7. The work of the year is correctly described by the Settlement Officer as combining great progress with small expenditure.

^{*} The assessment of Safipur was also sanctioned during the year, but the revised james were declared in the year previous in anticipation of sanction.

Hardoi.—The Settlement Officer and Assistant Settlement Officer inspected and assessed the whole of the Hardoi tabsil and half of the Bilgram tabsil; an area of 833 square miles. The area remaining is 814 square miles, that is half the Bilgram tabsil and the whole of the Shahabad tabsil. The assessment report of tabsil Sandila was received during the year, and that for the Hardoi tabsil and parganas Bilgram and Sandi of the Bilgram tabsil shortly after its close. The total expenditure, including Rs. 49,295 incurred during the year, amounts to Rs. 1,48,104, or Rs. 63-12-1 per square mile on the entire area of the district.

Fyzabad.—The Settlement Officer completed the fairing of the records of the four parganas, Tanda, Surhurpur, Birhar and Majhaura, which were taken up last year. In the remaining six the records will not be revised. The four parganas abovementioned, comprising an area of 622 square miles, were inspected and assessed; but the assessment reports were not received during the year. The total expenditure has been Rs. 97,950, giving a cost rate of Rs. 56-12-0 per square mile for the district. The greater portion of this expenditure, Rs. 91,280, was incurred on the four parganas settled under the old system, where it falls at the rate of nearly Rs. 147 per square mile. This is high, but the Settlement Officer observes that it is not higher than it should be considering the complicated character of the work to be done.

Sultanpur.—The Settlement Offier has completed the revision of the maps and records of the entire district including the 208 villages in which this work was stopped and subsequently resumed. The attestation has also been finished, and all that now remains is the fairing of the records. This was a little in arrears but is now being pushed on rapidly. Five parganas containing 935 villages with an area of 646 square miles, were inspected during the year, and the revised assessments reported, as well as those of pargana Aldemau which was inspected in 1893-94. The total area assessed was 957 square miles. The only parganas remaining to be inspected and assessed are Baraunsa and Miranpur. The revised assessments of parganas Gaura Jamun, Jagdispur, Aldemau, Isauli cis-Gumti and Isauli trans-Gumti were sanctioned and declared. In them, the revision has resulted in an increase of Rs. 1,27,637, or 26:09 per cent. on the current demand. The charges for the year were Rs. 58,009, making a total from commencement of operations of Rs. 1,62,263, or Rs. 94-11-7 per square mile.

Partabgarh.—The revised assessments of six out of the seven parganas into which the district is divided were sanctioned and declared during the year. The revenue in these parganas has been raised to Rs. 9,19,904, giving an increase of Rs. 2,41,009 or 35.5 per cent. on the former demand. The assessment of pargana Patti was again revised, with the result that the new demand now stands at Rs. 4,32,721, an increase of 41.17 per cent. on the old revenue. One of the talúqdárs, who refused to engage for the revised demand, has been excluded from settlement with the sanction of the Government of India. A few other talúqdárs have declined to engage; but it is not expected that they will persist in their refusal.

The expenditure during the year was Rs. 37,082, and from commencement of operations Rs. 2,44,945, or Rs. 1,69-11-11 per square mile. Here, as in Unao, the expenditure is high, and probably from the same cause.

Bora Banki.—The fairing of the records of the nine parganas for which revised records have been prepared has been finished. The area inspected during the year was 626 square miles, and the area assessed was 831 square miles. The assessment of the parganas inspected during the year, and of pargana Fatehpur which was inspected in the year previous, was completed and reported. The revised assessments of the four parganas, which were assessed in 1893-94, were sanctioned and declared. The revised revenue in these is Rs. 4,77,274, giving an increase of Rs. 1,02,747, or 27.43 per cent. on the former demand.

The charges during the year were Rs. 51,898. Adding this to the expenditure previously incurred, the total cost so far is Rs. 1,36,362, or Rs. 78-5-13 per square mile.

The district of Meerut and the sub-division of Lalitpur in Jhansi have been formally brought under settlement, and in Bahraich also the Deputy Commissioner has been invested with the powers of an officer in charge of settlement under the Land Revenue Act. But, in these districts, only the preliminary operations of survey and record are at present in progress, and the revision of the assessment has not yet commenced. Sanction has been accorded to the revision of the assessment of the Kheri district. In Shahjahanpur, which was also reported on by the Director of Land Records and Agriculture, further enquiries are being made to enable the Government to decide whether a general revision of the assessment is necessary. Orders to resume the ubari, or privileged tenure, in Gursarai, a large estate in the Jhansi district, were received during the year; and the summary settlement of the estate has since been completed and reported for sanction. A regular settlement will be made after the completion of the survey which has been undertaken. A settlement record will be prepared for Gursarai in accordance with the provisions of the Land Revenue Act; and also for Kakarbai, another ubari, in which there is no existing record-of-rights.

Abstract statements of the work done during the year and of the cost of settlement operations are appended:—

Abstract statement of settlement work.

MAPPING.

Village Field Maps.

The Survey Office, Calcutta, continue to reproduce the village field maps of districts cadastrally surveyed in the North-Western Provinces. During the year under report sheets of the Jhánsi and Garhwál districts were in hand, up to June last 71 sheets of the former were reprinted, whilst of the sheets of the Garhwál district 6,302 in number representing 2,965 villages, 1,213 sheets were photozincographed and 202 sheets zincographed, or a total of 1,415 sheets printed to end of 30th June 1896, leaving a balance of 4,887 sheets.

(2) AND (3).—STATE PROPERTIES AND WASTE LANDS.

North-Western Provinces and Oudh.

At the beginning of the year there were 400 State properties in the provinces with a land revenue demand of Rs. 1,33,797. During the year the changes were insignificant, 13 estates with a revenue of Rs. 807 having been acquired, while 21, with a revenue of Rs. 90, were removed from the accounts. There were thus 392 estates paying a revenue of Rs. 1,34,514 in the possession of Government at the close of the year. The total current rental amounted to Rs. 7,53,002 against Rs. 7,74,498 in the preceding year. The estates in the Naini Tal district are again mainly responsible for the falling off, which is due to successive bad seasons and to heavy mortality among cattle, and in the case of the Tarái estate, where there was a decline in the rent-roll to the extent of Rs. 22,260, to relaxed efforts on the part of the subordinate staff and the village headmen in promoting cultivation. Including outstandings, the total demand was Rs. 7,58,048, of which Rs. 7,10,215, or 94 per cent., were realized. Of the balance (Rs. 47,833) Rs. 2,644 are doubtful or irrecoverable, though not so shown in the appendix. After payment of land revenue and rates, the income was

Rs. 5,34,143, of which Rs. 3,24,869 were spent on charges of establishment, contingencies and improvements, leaving a net profit for Government of Rs. 2,0,9274. The Bánda district again accounts for the heaviest arrears (Rs. 17,676), the collections during the year being Rs. 18,641 only, or little more than half, the total demand of Rs. 36,317. It is feared that a considerable proportion of the arrears will have to be written off as irrecoverable, as, owing to a succession of bad harvests and the agricultural distress in 1896 in Banda, the chances of recovery are but small. In Bundcikhand, where the demand for rent varies according to the area cultivated, the real demand cannot be adjusted until it has been ascertained towards the close of the year what the area actually under cultivation has been. A large portion of the irrecoverable balances, therefore, consists of the purely nominal rent of fallow land, which appears on both sides of the account, and is struck off at the close of each year. So far, therefore, a fluctuating demand is unavoidable; but, for the rest the principles laid down by Government that the demand should be made just, and that purestual payment should then be insisted on, are followed so far as is practicable. In order to prevent tenants from keeping in their hands more land than they can cultivate, it is proposed to inquire from each tenant, every year, what portion of his holding he intends to retain; and to charge a small rent of four annas a bigha on any fields in this portion which are left uncultivated, subject to remission in poor years. The fields relinquished will be struck out of the holding, and let to other tenants. The Collector has continued to interest himself in the administration of the Banda State properties, which, on the whole, has not been unsatisfactory. The management of the two large estates, Holagarh and Khargapur in the Allahabad district was as successful as could be expected. In Holagarh nearly 97 per cent. of the demand was realized, without special pressure on the tenants. In Khargapur, the effects of successive unfavourable seasons have been severely felt, the overflowing of the Ramgarh juil in previous years having seriously depressed the condition of the tenantry in the bordering villages. In these circumstances the low percentage of the collections to the demand (86) is not surprising. The Ramgarh jhil drainage works are now complete, and a considerable area of land in the vicinity, which was relinquished in previous years, has been taken up on an enhanced rental. The experiments in the reclamation of usar lands have so far mot with little success, but they will be continued on somewhat different lines.

The outstanding balances were also large in Jhánsi (Rs. 1,830), Garhwál (Rs. 12,998), Lucknow (Rs. 3,019) and Hardoi (Rs. 1,668). Thoso in Jhánsi, Lucknow and Hardoi are the result of the bad harvests. The large balance in Garhwál represents the total rental and cess demands, of which nothing was collected during the year in consequence of the revision of rents not having been completed in time. The amount will be realized along with the current demand.

The expenditure was as follows:-

22 (22')						Rs.
Establishment	425	***	***	144	***	79,046
Contingencies	•••	44,	***	ap 1		78,070
Improvements	***	***	***	***	***	1,72,753
				Total	144	3,24,869

By far the greater portion of this was, as usual, spent on the large estates in the Naini Tal district. The expenditure on improvements shows a decrease of Rs. 26,839 as compared with the preceding year, mainly in the Naini Tal estates where financial exigencies led to the curtailment of the budget estimates. Full explanations of the outlay on these properties and on the Dudhi estate in Mirzapur are given in the separate reports submitted to Government. In Banda Rs. 1,401 were spent on works which had been specially selected by the Collector after local inspection. Improvements were also carried out somewhat extensively in the Allahabad estates, where R= 5,957 were disbursed during the year. The sanitary condition of the Government villages in the district continued to receive attention. Little was done in the way of improvements in the Oudh state properties.

The total demand, including the amount outstanding at the commencement of the year, for the price of confiscated, escheated and waste lands, was Rs. 52,953; but this includes a sum which is payable in instalments. The demand actually realizable within the year was Rs. 12,953, of which Rs. 12,771 were collected, and the small balance (Rs. 182) is in course of recovery.

4.—Court of Wards.

North-Western Provinces and Oudh.

There were 149 estates under the management of the Court of Wards at the close of the year, or one more than at its commencement. Twelve estates were released during the year. None of these were of any great importance, but the superintendence of the Court had certainly been beneficial. The management of twenty-four estates was assumed by the Court during the year: twenty of these are in the North-Western Provinces and four in Oudh. Among them may be mentioned Nasir Husain Khan's estate (Cawnpore), which is largely involved, the debts amounting to nearly 1½ lakhs of rupees, and the Rája of Bhinga's estate in Bahraich, which has a gross income approximating Rs. 2,28,000, but is free of incumbrances. The Rája was disqualified on his own application and lives at Benares, receiving an allowance of Rs. 2,500 per mensem from the estate. The other estates the management of which was assumed during the year appear to call for no special comment.

The total area under the Court's management was rather less than 2½ million acres, of which about 1½ million acres were cultivated. The gross rental demand was 52½ lakhs of rupees, and the revenue payable to Government, including cesses and rates, amounted to over 22½ lakhs. Nearly one-third of the rental and one-fourth of the revenue are received and paid by the large estates of Balrámpur and Jang Bahádur. In seven estates there was an increase in the rental demand. The largest increases are apparent in the Tiloi estate, Rae Bareli (Rs. 5,246) and in the Anapur estate, Gházipur (Rs. 4,434). In the former the increase is attributed chiefly to the acquisition on mortgage of the Satanpurwa mahál; and in the latter to revised arrangements made for assessing rent in kind, and to better receipts obtained from sayar. Eight estates showed a decrease in the rental demand; that in Sahanpur (Bijnor) amounted to Rs. 13,942, which is due to a reduction in the demand on grain-rented villages owing to bad harvests and to losses sustained by floods. The decrease of Rs. 9,351 in the Arampur Bushi estate (Fatehpur) is accounted for by the release of a co-sharer's share from the management of the Court.

The total rental demand, current and arrear, in all estates amounted to Rs. 55,37,843, of which Rs. 48,48,850 or 87.55 per cent. was collected, as compared with 91.48 per cent. in the previous year. The best percentage (97) of collections on the current demand was obtained in the Balrámpur and Jang Bahádur estates, and it is explained that this high percentage is due to the system of leases prevalent in the estate, which makes the rental to a great extent independent of seasonal fluctuations. The Agra division comes next in order of merit with 90 per cent., Meerut follows with 87 per cent., then come Fyzahad with 86 per cent., Lucknow with 83 per cent., and Robilkhand with 82 per cent. In the other divisions the percentage did not reach 80, while in Kumaun it was as low as 39. The general explanation given of this falling off in the collections is that the year was, over the greater part of the Provinces, one of bad harvests and agricultural depression, and that the Court of Wards estates were injuriously affected, though to a less extent than those of other landlords. The management of the estates in Mainpuri is far from satisfactory, and the subject requires more attention from the Collector than it has hitherto received. The Government had occasion last year to animadvert on the lax management of the estates in Bijnor and Budaun. There has been no improvement in the former district, the reason assigned being unavoidable changes in the office of Collector during the year. The collections in the two estates in Naini Tal which have recently come under management were poor; and this result is largely due to want of energy on the part of the District Officers. The question of transferring the management of those villages which lie in Bijnor and Moradabad to the Collectors of those districts is under consideration. The results in the Unao district are also unsatisfactory.

The cost of management for all estates amounted to Rs. 4,85,605 as compared with Rs. 4,95,925 in 1893-94. The former total includes a sum of Rs. 8,445, which was disbursed on account of arrears of the previous year. The average cost of management throughout the provinces amounted to 9 per cent. of the income, which admits of reduction. In some estates the incidence was higher still. It is said that short collections have chiefly affected the percentage of cost of management, while in a few properties it is not possible to make any reductions in the charges for establishment. The special scheme of management was in force in eleven districts and in the Balrámpur and Jang Bahádur estates, and is reported to be working satisfactorily. The percentage of cost on the total normal income was highest in Cawnpore (11.5) and Bahraich (9.2); in the other districts it varied from 5.3 to 8.5.

In regard to improvements it has been laid down as a maxim that "the Court of Wards is not a landlord of the money-lending classes, looking only to an immediate return for capital sunk, but one which should find a return in the general improvement of the property." But nowhere, except in the Balrámpur estate, was effect given to this principle during the year: elsewhere estates with a gross income of over 35 lakhs of rupces spent less than 2 per cent of that income on improvements for the good of the tenantry or the security of the rental. While no doubt it is not possible in a large number of estates, owing to their insignificance and indebtedness, to expend much money on improvements, still something more than has been done might have been done. Among the works carried out may be montioned the construction and repair of wells, tanks, and embankments; the filling up of excavations; the planting of trees, and other sanitary improvements. In two estates in Meerut a fuel and fodder reserve has been initiated, and a scheme for afforesting the ravine tracts of the Chakarnagar estate in the same district was sanctioned by the Board of Revenue during 1896.

Satisfactory progress has been made in sanitary measures, especially in the larger estates. Attention has also been paid to vaccination: the matter is said to have been more methodically taken up during 1896, and the entertainment of estate vaccinators has been sanctioned for the first time in several estates. No doubt the example set by the Court of Wards in Oudh will serve to give an impetus to vaccination, which has yet much ground to make up in that Province.

In twelve districts pony and donkey stallions are maintained, and the question of cattle-breeding has also been taken up. It may be hoped that much good will result from the experiments which are being made in this direction. As remarked last year, the improvement of the breed of cattle and horses needs increased attention, and mule-breeding is a profitable pursuit and of great benefit, not only to the people engaged in it, but to the country at large.

The amount advanced to tenants as taqávi was more than double that given in the previous year, this form of aid being all the more necessary owing to unfavourable seasons. Instructions were issued by the Board with a view to facilitate the taking of such advances. The whole subject is under consideration and inquiry, and no doubt further improvements will soon be devised.

The investment of surplus funds of the more prosperous estates amounted to Rs. 7,08,226, as compared with Rs. 6,60,191 in the previous year. Rupces 1,76,900 were invested in Government securities; Rs. 1,06,571 in the purchase of landed property and houses; and Rs. 4,24,755 in loans to other estates.

The number of notices of ejectment issued exceeded that of the previous year by 39, but the area affected rose from 9,702 to 15,054 acres. Seventeen per cent. of the notices were contested, and only 4 per cent. with success.

The management of the Balrámpur estate continued to be successful, and much good and useful work has been done in it.

CHAPTER III.

PROTECTION.

1.—LEGISLATING AUTHORITY.

• The Legislative Council met twice during the year, at Naini Tal on 24th June 1895 and at Lucknow on 17th February 1896.

2.—Course of Legislation.

Three Bills, none of which were passed into law, were dealt with during the year, viz.:—

- (1) the Honorary Munsifs Bill;
- (2) a Bill to amend the North-Western Provinces and Oudh General Clauses Act, 1887; and
- (3) a Bill to provide for the inspection of Steam Boilers and Prime Movers attached thereto.

The first Bill was pending from the preceding year and the two latter were new Bills introduced during the year. All three were under the consideration of Select Committees at the close of the year; the first two have since been passed.

3.—POLICE.

The statistics of cognizable crime are excerpted in the table below for the last five years. The gross figures (in column 2) include sanitary offences against local laws; but the number of sanitary offences thus included is given separately in brackets:—

	Year.		Cases reported.	Cases investi gated.	Percentage of cases investi- gated to reported.	Cases decided.	Cnses convicted.	Percentage of cases convicted to decided.	Percentage of cases convicted to investi- gated,
			710 000	7.47.000		F1 170	59,842	84	41
1891	***	•••	213,880 (15,979)	145,260	68	71,159	99,042	Q-29	.97
1892		•••	183,102	123,970	67	61,886	51,833	84	41
1893		•••	(16,998) 183,435	110,651	GO	64,550	54,187	84	49
1894	•••		(20,259) 203,346	106,587	52	65,850	55,622	84	52
1895	***		(20,112) 223,353 (20,718)	117,810	53	73,735	63,812	87	5 1

The cases reported were 20,007 in excess of the return for 1894, the increase being chiefly under burglaries ("lurking house trespass, and house-breaking") and thefts. The burglaries reported in 1895 were 98,565 against 85,483 in 1894, an increase of 15 per cent., or 13,082 cases. Reports of thefts rose from 65,948 in 1894 to 69,453, an increase of 3,505: and reports of cattle-thefts from 4,265 to 5,487, an increase of 1,222 cases. The extraordinary increase of burglaries and the considerable increase of thefts was attributed partly to the existence of distress among the poorer classes owing to the failure of the harvests, and partly to the fuller reporting of this class of crime under the rules of 1893 by which burglaries without loss and thefts under Rs. 10 in amount are no longer required to be investigated by the police unless

the complainants ask for inquiry. The effect of this change in procedure was noticed last year and the figures then given are reproduced with the addition of those for 1895:—

		-	Cases of b	urglary.	,		Cases	of theft.	
Yea	r.	Reported.	Investi- gated.	Decided.	Convicted.	Reported.	Investi- gated.	Decided.	Convicted,
1892	•••	68,124	42,368	6,596	5,218	63,287	31,736	18,536	15,475
1893	•••	60,397	27,739	6,517	5,204	64,703	32,735	18,559	15,429
1894		85,483	26,141	7,981	6,480	65,948	30,689	17,508	14,769
189 3	•••	98,565	30,462	10,369	8,816	69,453	34,643	20,504	17,752

Since 1892 reports of barglaries had increased by 44 per cent., and investigations had decreased by 28 per cent., while cases taken before the Courts and judicially decided had increased by 57 per cent., and convictions by 68 per cent. The great increase in cases of burglary in which police investigation eventuated in a trial, and in cases in which trial resulted in a conviction was distinctly favourable to the police, and supported the inference that the change in the rules, by giving more time for the investigation of serious cases, had on the whole, been beneficial. The figures also afforded good ground for the belief that, until the change in the rules, reports of burglary without loss were either not made or, if made, were suppressed by the police, to save the trouble of a probably unsuccessful investigation and unfavourable returns of work. The present rule might, however, tend to manipulation of figures in another direction, difficult cases of burglary in which loss had occurred being returned as burglaries without loss. This tendency could only be checked by constant vigilance on the part of District Superintendents of Police and Circle Inspectors.

Reports of murders by robbers rose from 35 in 1894 to 47 in 1895: of grievous hurt from 2,160 to 2,398: of administering stupefying drugs from 49 to 76: of dakaiti from 197 to 288: of robbery with hurt from 90 to 114: of robbery from 777 to 808: of receiving stolen property from 5,112 to 6,033: of mischief to animals from 649 to 790. On the other hand, decreases occurred in reports of riots, offences against religion, rapes, unnatural offences, attempts at suicide, exposure of infants, and concealment of births. The gravest feature in the reported crime of the year was the greater number of dakaitis and robberies. It was considered probable that this recrudescence of lawlessness and violence was due to the searcity and distress which unhappily marked the year. The action of the police in dealing with these crimes in 1895 compared favourably with 1894. Two notorious gangs of dakaits were broken up. It was also satisfactory that fire-arms were used in fewer cases by dakaits than in 1894.

The number of cognizable cases investigated by the police rose from 106,587 in 1894 to 117,810 in 1895, an increase of 10 per cent., the percentage of investigated to reported eases being 53 against 52 in 1894. The number of cases decided rose from 65,850 to 73,735, an increase of 11 per cent., and the number of cases convicted from 55,622 to 63,812, an increase of 14 per cent. The percentage of cases convicted to cases decided was 87 in 1895 against 84 in 1894. Of cases convicted to investigated the percentage was 54 in 1895 against 52 in 1894. Considerably heavier work thus fell upon the police during the year under report, and it resulted in greater success. They made more investigations, took more cases before the Courts, and obtained more convictions. The number of persons who appeared before a Magistrate in cognizable cases was 105,191 against 96,911 in 1894: of these, 82,100, or 78 per cent., were convicted, against 73,270, or 75 per cent., in 1894. Excluding sanitary offences, the percentage of convicted persons to persons appearing before the Courts was 76.6 per cent. against 74.0 per cent. in 1894.

The following statistics show the success obtained by the police in dealing with heinous crime:—

	Мт	ırder.		Ног	nicide		$\mathbf{D}_{\mathbf{a}}$	cáiti.		Ro	bbery.		Kidne	pping	3.	Ra	pe.		Pois	oning		То	tal.	_

In this statement the "reported" cases are the cases reported during the year less those which ultimately were struck off as false. Compared with 1894, these figures indicate an improvement in dealing with murder, robbery, and kidnapping, and comparative unsuccess in cases of dakáiti, rape, and poisoning. The percentages, however, given above are occasionally misleading, as in striking them allowance is not made for cases which may not have come up for decision within the year, or of cases decided in the year which were reported in the previous year. Thus after correcting for these classes of cases, the actual results of police action in poisoning cases and in dakáitis are found to be as good as in 1894. Coming to particular districts, Mirzapur and Benares showed very poor results in murder cases, and Saháranpur and Sultánpur in robb eries. In Saháranpur, of 15 true reports of robberies, 12 remained undetected. In Sultánpur, out of four reported robberies, one only was prosecuted to conviction. In Agra and Lucknow good results were obtained in dealing with murders; and in Aligarh Budaun, Azamgarh, and Fyzabad, in poisoning cases.

The figures for non-cognizable crime for 1895 compare thus with those for the two preceding years:—

,	Year.		Number of complaints preferred.	Number of persons against whom process issued.	Number of persons who actually appeared,	Number of persons convicted.
1893	141		106,890	142,121	138,450	44,583
1894	•10	***	111,681	133,840	130,016	45,135
1895	•••	•••	105,494	124,640	121,267	43,778

Complaints preferred under the Vaccination Act fell from 4,192 in 1894 to 839 in 1895, and minor decreases were noticeable under the Excise and Canal and Drainage Acts. In 73,486 cases process actually issued against 76,782 in 1894. Under the Vaccination Act processes issued in 365 cases against 305 in 1894. It was remarked last year that, though cases instituted under the Vaccination Act were numerous, the number in which process issued was small. In 1895, with a much smaller number of institutions under that Act, the number of cases in which process issued was actually larger than in 1894. It was noticed with satisfaction that there was again a decrease in the number of non-cognizable cases which the police were employed to investigate, the figures being 3,024 for 1895 against 3,763 in 1894.

The extent to which the provisions of the Criminal Procedure Code relating to security for keeping the peace and for good behaviour were used during the year are given below:—

			Sec	urity for g	good boha	vionr.		Se	curity to l	reep the r	ORCO.

1893°	•••	2,300	2,312	1,896	326	1,835	1,867	3,422	223	3,645	3,422
1894	•••	2,835	2,302	1,797	450	1,844	1,858	2,719	148	2,867	2,502
1895		2,759	2,675	2 058	637	2,164	2,193	2,849	282	3,131	-2,533

There was a considerable increase in the number of cases instituted against persons suspected of bad livelihood and in the number of persons bound over to be of good behaviour. The Inspector-General of Police remarked that in some districts these preventive provisions of the law were comparatively disregarded, and that a disinclination to make use of them was apparent on the part of some Magistrates. That they are open to abuse if exercised without discrimination and on insufficient evidence is obvious; but there is not the slightest doubt that in competent and careful hands they constitute a very effective instrument for preventing crime.

The supervision of time-expired convicts suffers, it was remarked last year, from the retention on the registers of many persons who cannot be effectively watched, but little progress towards the striking off of superfluous names during the year underreport was noticeable. It was, however, noticed with satisfaction that the number of absconded offenders arrested in 1895 was perceptibly larger than in 1894. An improvement in the number of cases in which previous convictions were proved was also perceptible, and much assistance in this respect was anticipated from the anthropometrical system which has now been started in these Provinces.

The expenditure on the police force from general revenues in each of the last five years is shown in the following table:—

			1891.	1892.	1893.	1804.	1895,
Railway Police			Rs.	Rs.	Rs.	Rs.	Rs.

The increase in		1		00,02,476	67,87,864	71,43,732	70,27,163

The increase in the expenditure since 1891 in the main indicates the extent to which effect has so far been given to the police reforms sanctioned in 1892 and estimated, when fully introduced, to cost $8\frac{1}{2}$ lakhs a year. In 1895, owing to financial pressure, exceptional measures were taken to restrict expenditure; but there is every expectation that, with the revision of the provincial contract, the Local Government will again be

PROTECTION. 21 ·

in a position to carry out to their completion reforms which are essential to the efficiency of the department.

The sanctioned strength and distribution of the provincial police force are shown for each of the last five years below:—

•	Year,		Jail g	uards,	Station	duties.	to prisoner	er lock-ups ies or escort is and tren- a reserve.	Total.		
	_		Officers.	Men.	Officers.	Men.	Officers.	Men.	Officers.	Men.	
1891	***	***	94	650	2,661	10,220	1,823	8,289	4,578	19,109	
1892	•••	•••	83	565	2,7 08	10,387	1,836	8,367	4,793	19,319	
1893	•••	•••	81	556	2,781	10,496	1,674	8,197	4,486	19,249	
1894	•••		•••		2,835	10,457	1,870	8,429	4,705	18,886	
1895	•••				2,815	10,080	2,496	10,313	5,311	20,393	

The total sanctioned strength was 23,687 officers and men in 1891 and 25,704 in 1895. In the latter figure are included 743 railway police. The strength of the force was fixed by the Police Committee at 25,467 officers and men (exclusive of railway police,) The sanctioned strength of the force in 1895 was thus slightly below the figure at which it was fixed by the Police Committee. Since that Committee reported, there have been minor changes in allocation, which have affected the total strength. Compared with the distribution in 1891, the sanctioned distribution in 1895 shows a large increase in the portion of the force employed as guards or in reserve. It is calculated that of the total 12,809 officers and men so employed in 1895, there were 7,301 in the armed branch, the rest representing civil reserves, recruits, and civil police employed on other than station duties. The strength of the armed police, it may be noted, was fixed at 7,477 by the Police Committee. The Lieutenant-Governor and Chief Commissioner has decided to abandon the present practice whereby the armed police are placed under the control of one of the two Deputy Inspectors-General, and the civil police under the other, and to adopt the plan of territorial distribution of duties between these two officers. Each Deputy Inspector-General will thus be responsible for the civil and armed police in the portion of the Provinces assigned to him. Among the advantages which will result from this change is that it will check the tendency to needlessly accentuate distinctions between the two branches, to regard the armed police as a military body, and to pay excessive attention to its drill and equipment. In point of fact most of the duties on which the armed police are employed are essentially of a civil nature, although they may require habits of discipline and ability to carry arms.

The proportion of the provincial police employed on station duties to the total population and area of the provinces is 1 to every 3,637 inhabitants and 1 to every 8.3 square miles. In Bengal (including Calcutta) the proportion is 1 to every 4,563 inhabitants and 1 to every 8.8 square miles. In the Central Provinces and in the Panjab the proportion is, respectively, 1 to 2,101 and 1 to 2,468 inhabitants, and 1 to 16.6 and 1 to 13.7 square miles. The variation in the density of the population in the different Provinces makes it difficult to draw any inference from these figures.

• Of the officers of the provincial police force, 2,498 were Muhammadans and 2,182 Hindus: of the men, 7,402 were Muhammadans and 12,981 Hindus. The preponderance of Muhammadan officers is noteworthy: and inquiry was made whether there were any special reasons to account for it.

The strength and cost of municipal and town police are given for the last five

	,		Municipal	Police.	Town Police.				
Year.		Number.	Cost.	Number.	Cost.				
				Rs.	•	Rs.			
1891 1892 1893 1894 1895	100 100 100 100		6,225 6,171 6,379 6,639 6,700	4,32,288 4,32,513 4,52,525 4,81,179 4,94,367	3,246 3,255 3,272 8,307 3,306	1,87,639 1,89,762 1,95,587 1,98,725 1,99,315			

years in the margin. The cost of the municipal police has risen by Rs. 62,000 since 1891. The improvement of the pay of the municipal police was one of the recommendations of the Police Committee, and in most municipalities

a wage of Rs. 5 a month is now given. The Lieutenant-Governor hoped that the Municipal Board of Fyzabad would see reason to reconsider the opinion attributed to them that Rs. 4 was sufficient pay for a municipal chaukidár.

The sanctioned strength and cost of the rural police force are given in the margin.

				Western inces.	0	adh.	Total.		
Year.		Number.	Number. Cost.		Cost,	Number.	Cost.		
				Re,		Rs.		.Rs.	
1891 1892 1893 1894 1895	894 614 646 686 744	000 111 614 198	59.625 69,746 69,773 59,907 69,923	21,71,192 21,75 248 21,75,068 21,80,048 21,79,568	30,340 29,262 28,861	7,60,254 7,45,736 7,22,212 7,49,870 7,65,317	90,086 89,085 88,766	29,31,446 29,20,984 28,97,280 29,29,918 29,44,885	

Comparing the figures for the last five years, the strength and cost of the rural police in the North-Western Provinces show little change. In Oudh, with a slight increase in cost, there has been a reduc-

tion of 7 per cent. in strength. In 1891 there was one chaukidár in Oudh to every 344 inhabitants, and in the North-Western Provinces one chaukidár to every 472. In 1895 the ratio was one chaukidár to every 408 inhabitants in Oudh and to every 481 inhabitants in the North-Western Provinces. The number of chaukidárs in Oudh is still excessive and their pay inadequate, and further revisions of circles are to be made in order to place this force on a satisfactory footing. The average wage of the village watchman in the North-Western Provinces in 1895 was Rs. 36 a year; in Oudh only Rs. 26.8. The question of substituting cash-paid chaukidárs in Gorakh-pur and Basti for the goráits is still under discussion. The expediency of the reform is clear, but it will entail considerable expenditure.

Statistics of punishments and resignations for the provincial police force compare with those for 1894 as follows:—

•	Fine and suspension.		l'Degradation.			Dismissal.		cially	Resigned.		
•					Tramiteesi.		puni	shed.			
		1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.
Officers	740	260	269	404	431.	53	66.	24	. 29		
Men	***	729	553	1.66	162	418	489	168	167	697	648
Total		989	822	570	593	471	555	192	196		

The Lieutenant-Governor and Chief Commissioner was of opinion, from cases which had come before him, that the punishment lists were unnecessarily swollen by

hasty punishments, and he had been obliged to reverse orders of dismissal and degradation which were clearly unsupported by evidence, and to signify his disapprobation of proceedings which not only involved injustice to individuals, but also created a feeling of insecurity in a sufficiently unpopular service. A rule was suggested that a day should intervene between the close of the departmental inquiry and the formal award of punishment. It was not thought necessary to make this rule an absolute order of Government, but it was held to embody a very sound maxim of practice for inexperienced officers, and as such was commended to their attention. But the true remedy is improvement in the personnel of the force. With better pay and higher educational qualifications, this improvement will come in time.

Punishments inflicted on the rural police force continue to show a satisfactory decrease, the number being 6,083 against 6,710 in 1894. Rs. 26,395 was paid in rewards to this branch against Rs. 22,662 in 1894. The Lieutenant-Governor and Chief Commissioner concurred with the Inspector-General of Police as to the importance of the village chaukidár in the successful police administration of a district.

Three charges of torture were preferred against the police during the year. In one case the accused were acquitted by the Sessions Judge; in the other two, convictions were obtained. In no case was the procedure of the police, as distinguished from misconduct, adversely commented on by the Courts. In the Government orders on the report for 1894 the neglect of some District Superintendents of Police to test periodically the knowledge of subordinate officers in law and procedure had been noticed, but it appeared that little or no attention had been paid to the subject in some districts. In Farukhabad, Etáwah, Cawnpore, Azamgarh, Kumaun, and Gonda no officers at all, and in Dehra Dún, Budaun, Mainpuri, Bánda, Jaunpur, and Kheri less than five were examined. In contrast with these districts were the districts of Meerut (35 examined), Aligarh (43 examined), Agra (71 examined), Jalaun (33 examined), Gorakhpur (68 examined), and Lucknow (62 examined). The Inspector-General of Police was requested to instruct District Superintendents that neglect on their part in future to comply with the standing orders on this subject would be severely noticed.

The old tests of police work dealt with the whole body of cognizable crime, excluding only sanitary offences, but including offences which, under present executive instructions, the police are not required to investigate. The new tests are based on statistics of serious cognizable crime which it is obligatory on the police to investigate without regard to the wishes of the complainant. The new tests, therefore, deal with a much smaller body of reported offences. The provincial figures on which the old and new tests are respectively based are given below for the two years 1894 and 1895:—

A.—Old tests.—Total cognizable crime (excluding sanitary offences).

	Cases reported.	Cases inquired into.	Cases convicted.	Incidence of reports per 10,000 of popula- tion.	Percent- age of convic- tions to reported cases.	Percentage of convictions to cases disposed of.	Percentage of persons convicted to persons whose cases were disposed of.
1894 { North-Western Provinces. Oudh	121,134 62,764	58;891 26,155	26;648 9,865	35 49	21·9 15·7	81·3 79·7	74\5 72\6
Total	183,898	85,046	36,513	39	19.8	80.9	74:0
1895 North-Western Provinces. Outh	136,085 67,487	67,148 28,503	31,258 12,259	89 58	22·9 18·1	83 7 84·2	76·7 76·4
Total	203,572	95,651	43,517	43	21.3	83.8	76.6

B.—New tests.—Serious offences.

	Cases reported.	Cases enquired into.	Cases convicted.	Incidence of reports per 10,000 of popula- tion.	of convic-	Percentage of convic- tions to cases dis- posed of.	Percentage of persons convicted to persons whose cases were disposed of.
(North-Western Provinces	82,730	30,675	12,548	10	38 3	79.6	71.5
1894 Oudh	15,508	15,021	5,065	12	820	79.2	70.7
Bailway Police,	1,688	1,561	707		41.8	84.2	80.7
Total	49 926	47,257	18,320	11	36 6	79.6	71.5
North-Western Provinces.	39,565	33,264	15,931	11.8	40.2	82.4	73.1
1895 Oudh	18,311	17,737	6,774	14.4	86.9	84.6	75.8
Railway Police	1,791	1,677	. 753		42.0	82.5	77.7
Total	59,667	52,678	23,458	12.9	39.8	88,1	74:0

The cases which form the basis of the new tests were little more than one-fourth of the total number of cognizable offences; but they were 'nearly all investigated, whereas less than half the total number of cognizable cases were investigated. The percentage of convictions to reports was also higher in these serious cases in which investigation is, as a rule, obligatory than in the general body of cognizable cases. In both classes of cases the incidence of reports per 10,000 of the population was higher in 1895 than in 1894, and in both classes and in both years the incidence was higher in Oudh than in the North-Western Provinces. In both classes of cases and in both provinces the percentage of convictions to reports and of convictions to disposals was better in 1895 than in 1894. The improvement and the present standard of efficiency were about the same in either province, though the fact that reporting of petty crime was fuller in Oudh than in the North-Western Provinces resulted in the Oudh percentage of convictions to disposals being somewhat lower than in the North-Western Provinces. The relatively high incidence of reports to population in Oudh is a persistent phenomenon which has never been satisfactorily explained, though it is probably in great measure due to the density of the population. In the nine districts which showed the highest incidence of reports of cognizable crime to population there were six Oudh districts, Sitapur heading the list with an incidence of 76 reports to every 10,000 inhabitants. In reports of serious crime the position of Oudh relatively to districts in the North-Western Provinces was less marked, though here also Sitapur headed the list with an incidence of 26 against a mean of 12.7 for the two provinces.

The Lieutenant-Governor observed that in applying the tests to the several districts the Inspector-General of Police had been careful not to give more weight to them than they deserved. This was especially necessary, as there were many indications in the district notices that police returns could be manipulated to suit the new tests as readily as they could when the old ones were in force, and that they were, as a fact, so manipulated.

The rule which permits a complainant to send a report to the police-station in writing instead of himself reporting the offence appeared from the district notices to be becoming popular, and to have contributed in some measure to the great increase in the number of reports of cognizable offences. The Inspector-General remarked that " a large proportion of written reports give information as to the commission of crimes which otherwise would never have been brought to the notice of the police," and this is the strongest possible argument in support of the rule if it is intelligently worked.

The practice which was reported to exist in the Moradabad district of the complainant being required to himself bring his written report to the police-station was pronounced to be productive of no possible good, and to defeat the object of the system in many instances, and its discontinuance was ordered.

PROTECTION. 25

The district notices were, on the whole, favourable to the new system of village, head-men. The Magistrate of Moradabad reported that "it has had a salutary effect." The Commissioner of the Meerut Division concurred with the Magistrate of Meerut in "hearty commendation of the system." The Lieutenant-Governor said that if the system was to be a success, the submission of reports by the head-men must be made a regular, and not merely occasional, duty: while efforts must be made to attach a certain dignity to the position and to prevent the head-man being harassed with business not attaching to his office.

The disadvantages attendant on the sessions trials of a district being held in another district, to which the District Superintendent of Unao had drawn attention, were recognised by the Government. Measures are being taken to provide sessions Court-houses in the three Oudh districts where they do not exist.

•There are not a few matters in which the organization and efficiency of the Department are capable of improvement, and these matters are receiving the close attention of the Government and are under discussion. The public expenditure on the force has been largely increased of recent years, and the total annual charge will soon stand at a figure which should, under intelligent guidance, give the Province a capable and honest police. There are signs that improvement has already commenced, and it is not unreasonable to hope that this improvement will continue and will be reflected in the reports for future years.

Cattle-theft.—Before examining the statistics of the year, the technical rules which govern the police returns of cattle-thefts in these districts may be briefly stated. Reports to the police of such occurrences are either to the effect that cattle have been stolen or that they have strayed. In the former event the report is at once recorded in the crime registers as a case of theft, and the ease is investigated. In the latter event the report is differently dealt with according as the eattle have strayed or disappeared from an inhabited site or eattle-shed, or from open grazing-grounds. If the stray is from an inhabited site or cattle-shed, the case is presumed to be one of theft, and is recorded as such in the crime registers and investigated. If the stray is from grazing-grounds, the case is not treated as one of theft, and is not brought on the registers or investigated without the express orders of the District Superinendent of Police or of a Magistrate, unless the owner in reporting the stray has asked for an investigation, or unless the officer in charge of the police-station has reasons to believe that theft has occurred. The subjoined table summarizes the return of all cases reported as cattle-thefts and of cases which, having been reported as strays, are dealt with as theft cases under the rule above mentioned. The figures for 1894 and 1895 compare as follows:—

		arrests	bave	re a	pc-	-1200		Pe	ercentag	es.		Cat	5le—	
	red.	which arr	\$	brought before a	brought	rich.	convicted.	-310	dis-	per. were	St	olen.	Re	covered.

Number of cases in why victions nere obtained	Number of persons co	Cases convicted to report-	Cases convicted to posed of.	Fersons convicted to gons whose cases w disposed of.	Number.	Value.	Number.	Value.
			<u>.</u>									Rs.		Rs.
1894	4,539	2,088	5,293	2,211	2,923	1,611	1,959	39.76	75.95	70 OG	5,190	96,841	4,175	84,434
1895	5,965	2,821	6,454	2,906	3,832	2,247	2,704	42 37	79 70	72.96	6,224	1,33,433	5,035	1,02,86

These figures bear out the Inspector-General of Police's opinion that there was greater police activity in 1895 than in the preceding year, and that the results were better in every respect. The increase in the number of reported cases was attributed

by him partly to an actual increase in cattle-thefts under the stimulus of a poor kharif barvest, and partly to greater activity on the part of the police in investigating suspicious cases of "strays." The latter supposition, however, did not derive much direct support from the circumstance that 455 cases reported as strays in 1895, were investigated as thefts. As 361 cases were so investigated in 1894, the statistically ascertained increase in police activity was small. It is possible that all districts did not return figures for strays on a correct principle, and that the number of cases of strays treated and investigated as thefts was much larger than indicated. Instructions were i-sued to secure uniformity in this respect. There was undoubtedly a large increase in the reports of cattle strays in 1895, and as very many, if not the majority, of these were really theft cases, the inference arises that crime of this class was exceptionally rife. The figures for the two years stood thus:—

	Strays ports	re-	tered as		Retained as strays.		Recovered.		Value of strays.		Value re- covered.	
,	From grazing-grounds.	From village sites.	From grazing-gronnds.	From village sites.	From grazing-grounds.	From village sites.	From grazing-gronads.	From village sites.	From grazing-grounds.	From village sites.	From grazing-grounds	From village sites.
								}	Rs.	Rs.	Rs.	Rs.
1894	10,994	529	286	125	10,758	217	5,360	175	1,68,533	4,386	90,180	3,152
1895	15,315	408	830	116	14,898	292	6,932	22	2,51,404	5,741	1,19,488	4,767

The number of cattle returned as recovered in 1895 was proportionally much less than in 1894. If reliance could be placed on these figures as indicative of the actual losses of the agricultural population, they would reflect unfavourably on the efficacy of the protection given to property by the police of these Provinces. The Inspector-General of Police suggested that in the majority of cases in which cattle are recovered by the owners through the agency of professional go-betweens, the recovery was not reported though the loss may have been. Admitting, therefore, that the police returns of strayed cattle were inaccurate in this respect, they at least indicated the extent and strength of the system of professional cattle-lifting and illegal blackmailing which still flourished in many districts, and which, as the Magistrate of Muttra remarked, was acquiesced in by the victims in preference to seeking the assistance of the police. With regard to the results of police action, the districts in which improvement in the action of the police was most marked and most attention was given to the subject by District Superintendents were Meerut, Bareilly, Moradabad, Budaun, Hardoi, Agra, Azamgarh, and Basti. The districts of Saharanpur, Shahjahanpur, Bulandshahr, Mainpuri, and Farukhabad were unfavourably reported on. The Government learnt with satisfaction that the improvement which had of late taken place in the relations. between the frontier police of the Native States bordering on the districts of the Agra Division and the British police had greatly tended to check cattle raids on the border. The necessity for concerted action, however, on the part of the police of adjoining districts, and the want of it in Shahjahanpur, Hardoi, Budaun, Bareilly, and other instances, was noticed. The Inspector-General of Police's proposal that a conference of the District Superintendents in the Agra Division should be convened to adopt concerted measures for the detection of habitual receivers of stolen cattle, and to ascertain the points on which stolen cattle were found to converge, was approved. also requested to issue instructions as to the measures to be taken by the police to circulate information about impounded cattle, and of the occurrence of cattle-thefts. In this connection the Local Government suggested for consideration whether use might not be made of the Police Guzette in disseminating the information in question. PROTECTION. 27

Total		100	290			11	34				

poisoning and flaying cattle alive occurred in 1895, the increase being attributed to a demand for hides. A fair measure of success in obtaining convictions was secured in the Benares, Azamgarh, Gorakhpur, and Ballia districts. In Gházipur, where the crime was espe-

cially frequent, the success was indifferent (33 convictions in 83 cases). In Mirzapur the result of police action was not reported. As usual, arsenic was the poison most commonly used, and the police failed to discover how the poisoners obtained their supply of arsenie. The question of controlling the sale of arsenie by legislation was subsequently under the consideration of Government. Nothing was done towards discovering the motive for the brutal practice of flaying cattle alive, and, in the absence of reported testimony of actual eye-witnesses to the fact, the theory of the District Superintendent of Police of Ballia that the animal is first killed with a blunt instrument and the hide removed with such promptitude that the flesh is left in a quivering state is possibly correct. The voluntary registration of sales of cattle at public and private marts and at police-stations was making good progress, and though not primarily intended as a means of detecting cattle-theft, did in fact lead to such detections in some districts. The Magistrate of Benares was asked why registration in his district was entrusted solely to the police, and whether there were no private or public markets for cattle where other registering agencies can be established. The intention of the Government in authorizing the registration of cattle sales at policestations was to provide facilities of registration in eases of cattle sold otherwise than at marts. Police registration was meant to be subsidiary and subordinate to the system of market registration, from which the police were expressly excluded. In some districts this does not seem to have been understood. In Saháranpur, as in Benares, the sole registering agency is apparently the police. The attention of District Magistrates was directed to the matter. The available information regarding cattle registration in different districts showed that the subject had been very imperfectly dealt with in many district reports. The matter was brought to the notice of District Magistrates with a view to the defects noticed being remedied in future reports.

CRIMINAL TRIBES.

The number of Sanauriahs on the registers at the end of the year again decreased, being 77 against 85 on the 1st April 1895. Thirty Sanauriahs were absent without pass at the end of the year, and three were in jail. Though the area nominally under cultivation showed a small increase, the number of persons engaged in agriculture fell from 28 to 24. No improvement in reclaiming the tribe is recorded, though the partial surveillance exercised over its members may act as a restraint upon, or may at least deter them from committing, crime in these Provinces.

The report on the Barwars of Gonda was equally discouraging. The number present in the villages again fell, and of 4,067 on the register, 614 were at large without pass and 239 in jail on the 31st March 1896. The number absent without pass was larger than at any time during the last five years. The number of absconded

Barwars arrested during the year was 167, or precisely the same number as in the
 year 1893-94 and 25 less than in 1894-95. The increased absconding was plausibly conjectured by the Deputy Commissioner to be due to a succession of bad harvests

and to the poor returns made by agriculture compared with the results of successful crime. Rents were even more in arrears than usual, and the outstanding advances (Rs. 1,299) for seed and bullocks were regarded by the Deputy Commissioner as virtually a bad debt. The operations under the Act against this tribe have probably so far had a greater negative than a positive result. There is evidence that absconded Barwars shun these Provinces in consequence of increased police activity, greater danger of recognition, and severe punishments. Railways have given them more facilities for rapid movement. On the other hand, the anthropometric system, which is now being perfected throughout India, is against them. It is satisfactory that 614 convicted Barwars were anthropometrically measured during the year.

The number of Sánsiahs on the registers at the end of the year was 1,528, of whom 403 were in the Sultanpur Settlement, 71 in the Fatehgarh Reformatory Settlement, and 131 settled in districts. This accounted for 605. Of the rest, 850 were at large without pass, and 73 in Jail. The number settled in districts continued to In 1894-95 it was 160; in the year under report it was only 131. Of the Sinsiahs thus settled, only 24 were engaged in agriculture, the rest being municipal sweepers and jail warders. Their conduct, on the whole, was satisfactory, especially if it be borne in mind that till within the last few years most of them had been accustomed to a nomad predatory life. But the impulse to absecued on small provocation is so strong that there is no security that any group will remain throughout the year. Subsequent to the close of the year under report, the Settlements at Sultanpur and Fatehgarh were closed and the inmates transferred to an agricultural colony in the Kheri district.

The Doms are not a proclaimed criminal tribe, for, although nomads and beggars, they are not professional dangerous thieves of the Barwar or Sausiah class. Of the 8,000 Doms in the district, less than 1,300 were in settlements supervised by Government officers. The Reformatory work so far effected by these settlements was small, and the Magistrate of Gorakhpur considered that they did not even act as a restraint on crime, and seemed disposed to suggest the abandonment of the experiment. Tho Commissioner, on the other hand, recommended the establishment of large Reformatories on the prison type for the children, and the collection of the adult Doms in three large agricultural settlements. The Reformatory scheme would be exposed to the difficulties which proved fatal to the Fatchgarh Reformatory for Sánsiah children, and was negatived on that account. The agricultural settlements on the large scale contemplated would be costly, and doubt was expressed whether the State would be justified in incurring so considerable an outlay. The Lieutenant-Governor was prepared to co-operate with any missionary or philanthropic society which was prepared to take up the work of reclaiming the Doms in earnest, and which would come forward with a practical scheme.

The small Haburah colony in the Moradabad district showed signs of greater stability and promise than other settlements of the kind, though it had been tried by successive had sea-ons. The acknowledgments of the Government were conveyed to Chaudhri Dhyan Singh, Rái Bahádur, for his successful management.

Eunuchs.—The following table summarizes the principal figures for the year:—

	Number of enauchs originally registered.	On the register at the beginning of the year.	Added.	Struck off.	Remaining at the close of the year.
NW. Provinces	1,096	374	7	19	862
Ordh	298	234	4	6	232
Total	1,394	608	11	25	594

The additions comprised three ennuchs who returned to Meerut and one who removed to the same district from Delhi, while the remaining seven constituted initial registrations, including three relating to residents of Sitapur who crossed the Nepál frontier, for the purpose of being emasculated. The 25 deductions represented 21 deaths and four expunctions, including two persons proved to be virile. The value of escheats to Government was valued at Rs. 35-6-6, while property valued at Rs. 388-14-9

was handed over to the representatives of the deceased. No cases of emasculation occurred in the Provinces; nor were any minors in the possession of cunuchs. Two prosecutions were instituted under section 26 in the Allahabad district, resulting in each instance in a fine of Rs. 2. At the close of the year 36 cunuchs were absent.

The year's proceedings on the whole were satisfactory, and afforded indications of the gradual disuse of the practices which it is the object of the law to repress. The annexed table exhibits the proportion of cunuchs who were returned as supporting themselves by some definite occupation without resort to beggary:—

On the regis- ters at the close of the year.	T'raders.	Shop- keepers.	Tailors.	Weavors.	Cultiva- tors.	Servants.	Labourers	Total earn- ing a liveli- hood by some occu- pation.
594	1	4	2	1	27	2	15	52

The proportion was much less than could be wished, and there is little doubt that in many cases the ostensible occupation of begging was supplemented by other and less reputable methods of gaining a livelihood. The Government directed that inspecting officers should do what they could to assist any persons on the register, who were able and willing to work, to obtain some occupation which, however humb'e, furnished a better guarantee for good behaviour than professional mendicancy.

The Local Government was of opinion that in several respects the supervision exercised by District Superintendents of Police might be improved. In the first place,

Muzuffarnagar. Saharanpur. Bateilly. Jalaun. Jaunpur. Mirzapur. Gonda. Unao. Rae Bareli. Bahraich. the inspection of enunchs in the marginally-noted districts did not appear to have been adequately performed. This was brought to the notice of the officers responsible for the neglect. In the second place, the

registers did not appear to have everywhere been carefully maintained; and it was remarked that, with the exercise of proper diligence, it should not have been found necessary to expunge as many as seven entries in Rae Bareli on the ground of mistake, while the registration of an imaginary person under the name of Umrao in the Kheri district was regarded as not creditable to the officers concerned. The deficiencies in the easual registers, which in the case of the Mirzapur district were so carelessly maintained that "no two statements agree," received the attention of the Inspector-General of Police. In the third place, it was noticed that, apparently in spite of the instructions contained in paragraph 2 of G. O. No. 1159/1011-529A, dated the 7th October 1893, and repeated in paragraph 4 of G. O. No. 1031/1031 of the 7th September 1895, an entry in the Jaunpur district was expunged without reference to Government for a reason other than death or removal from the district.

4.—Criminal Justice.
(a)—North-Western Provinces.
I.—Returns of Crime.

The returns are for 20 Sessions Divisions; the Aligarh division was enlarged from 1st April 1895. The distribution of districts at the end of the year was this—

Sessions Division.	Districts.	Sessions Divisi	
Sabúranpur	Dehra Dún, Saháranpur. Muzaffarnagar.	Bareilly Sháhjaháapur	Bareilly. Pilibbit. Shabjáhanpur.
Meerut	Meerut. (Bulandshahr.	Cawnpore	Cawnpore. Fatehpur.
Aligarh ,	} Aligarh. Etab.	Jhánsi	{-Jhánsi. ··· { Jalana.
Agra	Agra. Muttra.	Bánda '	(Báuda. ''' (Hamírpur.
Maiopuri	(Mainpuri. ··· { Etáwah.	Allahabad Mirzapur	Allahabad. Mirzapur.
Farukhabad	Farukhabad. (Naini Tal.	Jannpur Benares	Jaunpur. Benares.

. Moradabad	{ Bijnor. Moradabad. Budann.	Azamgarh Gorakhpur	Azamgarh. Gorakhpur. Basti.
		_	

Where figures by Sessions Divisions are given, the divisions for the sake of convenience have been taken as consisting all through the year of the districts which they severally included at the end of the year. In the Aligarh and Moradabad Sessions Divisions there are permanent Additional Sessions Judges. In Meerut, Farukhabad, and Bareilly there were temporary Additional Sessions Judges for a short time at the beginning of the year. The Fatchpur sessions are always held by the Judge of Banda, and the Basti sessions by the Judge of Jaunpur, as Joint Sessions Judges of the divisions. The distribution of criminal appeals does not follow the arrangements for sessions. The sessions trials and appeals from Bijner and Budaun districts ordinarily go before the Additional Sessions Judge of Moradabad, and those from Etah and Bulandshahr before the Additional Sessions Judge of Aligarh.

 Especial care was taken to improve the accuracy of the returns. Transfers within the district, which are not important for statistical purposes, were eliminated. There were still difficulties in accepting the figures of some districts, judging from a too close approximation of the number of the cases shown as brought to trial to the number of cases returned as true. This approximation appeared to be due to two causes.: (1) in two districts certainly, and perhaps in others, it was the custom to enter as dismissed under section 203 of the Code of Criminal Procedure, 1882, cases that had really been otherwise disposed of; (2) in some districts cases in which process issued for the attendance of the accused, but the decision was given without his attendance, had apparently been wrongly shown as brought to trial, and details of the results had been entered in the district returns; in other districts this was done only in those returns that furnished particulars as to persons by courts, while in the returns that showed cases (and persons) by classes of offences, the cases were not shown as brought to trial. These mistakes were corrected wherever possible, but some undoubtedly remained; and that some other errors also existed is clear from the great range of the numbers of cases struck off as false in the several districts. The High Court prepared rules for securing the proper registration of "offences reported," which were submitted for the consideration of the Government.

The provincial figures for four years are as follow:-

1892			Onences reported,	Cases returned as true.	Cases brought to trial.
1893	***	***	155,614	123,624	106.292
	144	•••	157,261	122,240 .	102,780
1594	***	•••	154,006	121,993	
1595	***	164	157,347	125,091	107,431

Accepting the returns as the best that can be obtained at present, the districts that had less than 60 per cent. or less of trials on offences are shown in the following table:—

No. and the second second	Etab.	Sháh- jahán-	Bu- daun.	Bijnor.	Garly	Bu- land-
Percentage of cases returned as true on offences reported Ditto brought to trial on cases returned as true Ditto brought to trial on offences reported	56 90	pur. 57 92	81 57	80 67	85 60	shahr. 70 81

There was no general indication of improvement in the matter of careful examination of complainants before issue of process.

The variations between 1894 and 1895 in the number of cases brought to trial divided among the different classes of offences were as follow:—

increase.						_		
State			Cases.	Decrease,				
Pablic tranquillity	***	***	1	Dublin :				Cases.

		170	10					
1582, and under special a	nd lane) l-	rre1						•
L - crack B	ON YAISTE TEMB	**1	1,010					

The increase in cases of theft and receiving stolen property was most noticeable in Cawnpore, Banda, Aligarh, Moradabad, Shahjahanpur, Allahabad (1,321 against 863 in 1894), Hamírpur, Basti, and Azamgarh (1,324 against 969 in 1894). The increase in Mainpuri and Shahjahanpur was attributed to bad harvests and to the prevailing high prices of food; in Cawnpore, Allahabad and Azamgarh, to better reporting and to agricultural depression.

The numbers of persons brought to trial and of those convicted during each of the last four years are as follow:—

• _ '					Brought to trial.	Convicted.	Convicted under the Penal Code.
1892	1***	*7.0	•••	400	185,725	91,738	49,140
1893	***	***	~.	***	184,001	90,038	49,357
1894	•••	•••	•••		180,162	91,916	48,995
1 205					177.734	97.204	53.852

Prosecutions for theft and hurt concerned 58,364 out of the 177,734 persons brought to trial in 1895, a proportion larger than that of 1894. The percentage of persons convicted to persons tried for each of these offences was as follows:—

		1892.	1893.	1894.	1895.
Theft	 	 68 2	67 4	77.2	72:3
Hart		 18:9	19.0	20.1	20.1

The following table gives a comparison of the numbers of persons concerned in proceedings, and convicted or subjected to an order, under special and local laws or the Code of Criminal Procedure, 1882, in 1894 and 1895 by classes:—

				1894.		18	95.
				Concerned.	Convicted.	Concerned.	Convicted.

	, ,	Total	•••	56,207	42,921	64,916	46,142

Proceedings under section 560 were more numerous and more judicious than in 1894.

Fifty-two per cent. of persons called upon to show cause against being bound over to keep the peace were ordered to give security.

Seventy-seven per cent. of persons called upon to show cause against being bound over to be of good behaviour were ordered to give security.

Business coming before the Criminal Courts of Original Jurisdiction.

II.-Courts of Magistrates.

The number of cases disposed of by the several classes of Magistrates' courts during the years 1893—95 was as follows:—

			h .	1893.	1894.	1895.
Benches of Magistrates (section 15)		•••	•••	19,821	20,432	21,805
Special Magistrates (section 14) and	Honorary	Magistrates	sitting			
aingly.		•••	***	7,870	3,007	3,973
Stipendiary Magistrates (section 12)	***	***	***	80,661	86,581	84,253
•					•	ı

The honorary courts continued to take an increasing share in the work of administering justice on the criminal side. They were generally well spoken of and received the thanks of the District Magistrates.

The number of summary convictions rose in all courts :---

Year.				Stipendiary Magistrates.	District Magistrates	Beuches.	
1894		•••	•••	7,416	547	7,782	
1895	•••	***	•••	9,022	581	8,885	

The results of trials as affecting persons are shown in the following comparison:---

				Number tried.	Number convicted.	Remaining under trial.	Percentage of convictions.
1893	•••		***	178,410	87,828	2,412	49.7
1894	***	499	***	174,013	89,672	2,454	51.9
[*] 1895	***		•••	171,437	94,874	2,355	5 5·3

In the above calculation for 1894 and 1895 persons referred for higher or different punishment are shown once only, and persons committed to the sessions or left under trial are not included.

The average duration of cases, which had been 5-97 days in 1893 and 5-43 days in 1894, rose to 6-4 days in 1895.

Particulars regarding witnesses in Magistrate's courts are as follow:-

						1893.	1894.	1895.
Number	attending	118	***	454	100	392,816	886,494	413,877
Ditto	examined		* 6.4	***	1-1	352,295	844,707	363,286
Ditto	paid	•••	***	***		85,549	83,203	92,730
Amount p	paid	• • •	***		•••	Rs. 41,762	Rs. 37.879	Rs. 41 503

Thus 22.5 per cent. of witnesses had their expenses paid as against 21.5 and 21.8 in the two years preceeding. The average payment was annas 7—2 against annas 7—3 and annas 7—8 in the two previous years.

The returns showed that 874 per cent. of witnesses were discharged on the first day of their attendance; but the returns cannot yet be relied on.

Of the witnesses attending court 89-7 per cent. were said to have been examined against 89-2 in the preceding year. But some witnesses attending still seem to escape registration.

III -COURTS OF SESSIONS.

Cases tried by Sessions Judges were as follow:--

			Cases for trial.	Cassa disposed of.	Cases left pending.	
1893	***	***	2,329	1,983	246	
1594	***	140	2,209	1,974	218	46 days.
1895	•••	•••	2,430	2,235	199	42 ,,

In the calculation for 1895 cases in which the trial abated—e.g. on the death of the prisoner, and cases that were transferred to another province, were not included in the number of cases for trial and disposed of.

The details as to persons concerned are as follow :---

Year.		Persons under trial.	Persons convicted.	Persons left under trial.	Percentage of persons convicted on persons whose
1600	***	4.003	2,205		cases were disposed of.
1894		3.863	2,162	484	63
1895		3.940	2,329	410	65
Thora w			-1020	934	65

There were a large number of persons under trial at the close of the year in the following districts:—Allahabad 33, Bijnor 31, Gorakhpur 24, Cawnpore 23, Moradabad 21. In Allahabad the large number remaining pending at the end of the year was due to the Benares riot case occupying all the working days at the close of the year; in Gorakhpur there were large arrears as cases were pending owing to witnesses from Nepál not having arrived.

In 1894 there had been 122 jury trials. In 1895 there were 119 affecting 158 persons; as regards 148 the Judge agreed with the verdict; in the case of 10 a reference was made to the High Court

There were 1,895 trials with assessors against 1,557 in 1894. In these 3,195 persons were on their trial; as regards 2,333 the Judge agreed with all the assessors; as regards 357 he differed from one or more, and as regards 503 he differed from allof the assessors. The case against two accused was withdrawn and therefore no assessors' opinions were taken.

Particulars of the witnesses in Courts of Session are as follow:-

						1893.	1894.	1895.
Number	attending					21,832	21,697	23,154
Ditto	examined	***	•••	,	141	15,619	14,890	16,029
Ditto	paid	•••	***			15,418	14,139	15,364
Amount	paid	•••				Rs. 18,104	Rs. 14,377	Rs. 13,786

Of the total number 66.3 per cent. received their expenses against 65.2 per cent. in 1894. The average sum paid each witness was Re. 0-14-3 against Re. 1-0-3 in the previous year.

In all 67 per cent. of the witnesses were discharged on the first day of their attendance, the percentages of 1894 and 1893 being 67·1 and 66·4 respectively.

The number of witnesses examined bore the percentage of 69.2 to the number attending. In 1894 the percentage was 68.6. Magistrates clearly still send up a number of unnecessary witnesses.

IV.-HIGH COURT

Two cases were disposed of in 1895 against six in 1894 and four in 1893. Two persons were concerned; one was acquitted, and one was convicted of an offence affecting the human body. The average duration of each trial was 35 days against 20 days in 1894.

Of the 37 witnesses attending, 27 were examined and 36 received their expenses. The average amount paid to each was Rs. 11-2-2 against Rs. 36-11-8 in 1894.

V.-ALL COURTS.

Particulars of the trials of European British subjects are as follow:-

				Brou	ght to trial.	Persons	Pending at the close.		
				Cases	Persons.	convicted.	Cuses.	Persons.	
1894	•••	***	•••	112	121	62		•••	
1805				185	151	90	1	1	

The total numbers of original cases decided by all Courts compare thus:-

					Regular cases.	Cases under the Code of Criminal Procedure.
1893	114	***			105,072	5 267
1894			144	•••	106,547	5,453
1895			***	•••	110,139	5,696

The results as affecting persons were these-

				1893	1894.	1895.
Acquitted or discharged		141	•••	89,993	81,241	77,656
Convicted	•••		•••	90,038	91,916	97.204
D				50.0	53.1	5 5 0

 ∇I .—Punishments inflicted on conviction.

The following is a comparison of the numbers of the several punishments in the past two years:—

						1894.	1895.
Persons sentenced to	death		744	,	***	130	106
Ditto	transportation		•••	444		278	274
Ditto	penal servitude	***		+47	•••	•••	
Litto	imprisonment		•••	*10	***	28,066	32,333
Ditto	fine	•••	•••			58,469	58,050
Ditto	whipping	•••		•••		6,153	7,581
Persons ordered to g				good behaviour		3,798	3,865
Persons imprisoned i				7**		1 000	1,066
Juveniles sent to a re	_	- G 0004111		•1•		63	6

For 1895 the death sentences are those confirmed or passed by the High Court; those passed in Courts of Session, but not confirmed by the High Court, are not included.

The tendency noticed for 1894 and 1893 towards a more lengthened term of imprisonment was not so marked in 1895. The following are the figures for the last two years:—

		Fi	iteen days and under.	Six months and under.	Two.years and under.	Seven years and under.	Above seven, years.
Courts of Magistrates	{ 1894 { 1895			13,390 15,012	8,318 9,932	21 31	4, 3•
Courts of Session	(1894 (1895	•••	10 7	97 9 9	369 400	972 1,158	27 <i>5</i> ≒ 215

References by Subordinate magistrates to District and Sub-Divisional Magistrates for an order of committal or a sentence beyond the powers of the referring court rose from 1,779 to 2,643. These references were most numerous in Allahabad (308). The Magistrate of Allahabad explained that the increase was due partly to more cases having been tried by 2nd class Magistrates and partly to his having insisted on Tahsildars referring cases of petty theft in which whipping seemed to be the punishment which should be inflicted.

In Magistrates' courts 1,296 sentences of simple imprisonment were passed in 1895 against 1,121 in 1894, or 4 per cent. of all imprisonments ordered in such courts.

The sentences of whipping may be thus classified :--

							1894	1005
To Now of all as	h						でいる	1895,
In lieu of other punis		***	***	.,,	•••	•••	5,534	6,947
In addition to other p		***		•••	***		498	516
On juveniles for offend	es not ordin	arily pu	nishable wit	h whipping.	***	***	121	118,
On first conviction	***	• • •	***	•••	•••		5,554	6,928
Percentage	***	***	***			•••	90.3	91:3
On sabsequent convic	tion,	400,	•••	•••	•••		599	658
Percentage	***	•••	•••	114		.,,	9.7	8.7
For theft		•••	•••	,	,	•••	4,609	5,500
For receiving stolen p	roperty,	•••	111,	•••	***	•••	603	618
For house-trespass an	d house brea	king	•••	***	***	•••	781	1,268

Whipping was inflicted in 25.38 per cent. of possible cases against 22.56 per cent, in 1894.

Details of punishments of fine are as follows :-

		Persons fined	Percentage on convictions.	Amount. Rs.	Realized. Rs.	Percentage
1603	*27	57,049	63 4.	3,14,457	2,52,645	realized.
1894		58,469	63-6	3,02,708	2,53,890	83•4. 83•8
1895	***	58,050	59 7	2,72,154	2,31,943	9-51

In Sessions Courts Rs. 5,023 were realized, or 75 per cent. of the amount (Rc, 6,696) imposed. The only large amounts of compensation paid by Sessions Courts were Rs. 300 in Aligarh and Rs. 125 in Benares.

In Magistrates' Courts the percentage of realization was 85.4 against 85.2 in 1894. The amount granted in compensation under section 545 of the Code of Criminal Procedure, 1882, represented 7.5 per cent. of the fines realized against 6.8 per cent. in 1894.

Appeal, reference, and revision.

The divisions having the heaviest files of appeals for disposal were: Moradabad 977, Aligarh 957, Gházipur 936, Bareilly 743, Cawnpore 646, and Jhánsi 597. The cases pending at the end of the year were over 20 in the following divisions only: Cawnpore 140, Allahabad 75, Bánda 43, Gházipur 43, and Aligarh 29. The large number of appeals pending at Cawnpore was due to their having been no Judge for one month during the year. Those at Allahabad were due to the Benares riot case.

(b)—Oudh.

The chief feature in the year was the large increase in the business of the criminal courts of Oudh. The following figures show the number of offences reported, cases brought to trial, and persons tried, convicted and acquitted in each of the last five years:—

				Number		Nun	ber of perso	ns	
Yes	ar.	Number of offences reported.	Number of offences returned as true.	of cases brought to trial dur- ing the year.	Under trial during the year, including pending from pre- vious year.	Acquitted or dis- cbarged.	Convicted.	Died, escaped, or transferred to another province.	Remaining under trial
			}	}					
1851	***	51,642	37,470	38,182	C8,331	34,569	81,698	290	7.000
1803	414	49,108	35 331	36,052	68,594	37,111	29,588		1,770
1593	•••	52,578	38,172	38,854	73,973	41,517		303	1,592
1894		52,205	35,804	39,971	1		30,731	323	1,402
1595				}	68,653	34,652	82,270	391	1,370
(I		55,186	42,060	42,722	72,100	34,116	36,635	139	1,210

Compared with 1894, there was in 1895 an increase of 2,931 in the number of offences coming within the judicial cognizance of the courts, and an increase of 3,751 in the number of cases actually brought to trial. The number of persons under trial increased by 3,426 and the number of persons convicted by 4,365. The percentage of persons convicted to persons brought to trial was 50.8 against 46.9 in 1894. This

indicates some improvement in the efficient administration of justice, and in the degree of care with which evidence was scrutinized and submitted to the courts by the police and the prosecutors for the Crown. It is, however, to be noticed that there was a considerable increase in the number of cases instituted for breach of municipal and other special laws, and that the ratio of convictions in such class of cases is necessarily high. The strength of the judicial staff was practically the same in 1894 and 1895. It speaks well for the industry of the officers employed in 1895 that they disposed of a much larger amount of work than in 1894 with no loss of despatch, and with smaller arrears at the end of the year. The average duration of each case in the Magistrates' courts was 6.78 days in 1895 against 6.84 in 1894. In the Sessions courts the duration was 49.10 days against 55.16 in 1894. The number of witnesse examined in all courts in 1895 was 123,545 against 112,218 in 1894.

The increase in crime which occurred in 1895 was connected with the agricultural depression and privation resulting from the poor harvests and bad seasons of 1895. The increase was most marked in offences against property. Cases of theft, robberies, dakaitis, lurking house trespass, and receiving of stolen property largely increased. There was a singular exception to this in two or three districts, notably Fyzabad, Sultanpur and Gonda, where, notwithstanding the existence of searcity through part at least of the year, the crime returns showed a falling off.

In 1894 it was remarked that if Magistrates would resort more freely to the provisions of section 203 of the Code of Criminal Procedure and dismiss groundless complaints after examining the complainant and considering the result of the investigation (if any) made under section 202, fewer persons would be summoned as defendants and witnesses, and much time and fruitless labour would be saved. The comparatively unfrequent resort to section 560 of the Code, which enables compensation to be granted in frivolous cases, was also commented upon. Considerable attention to these points was paid during the year under report by District Magistrates, and in most districts close supervision in these respects was exercised by them over the subordinate courts. Several officers pointed out that a preliminary enquiry under section 202 into the truth of a complaint cannot be made by a Magistrate with third class powers, and that consequently Tahsildárs, who, as a rule, are Magistrates of the third class, are obliged to direct issue of process in many cases in which a preliminary enquiry would have shown this to be unnecessary. The point is to be borne in mind in connection with the revision of the Criminal Procedure Code.

The results of trials in Magistrates' courts, as regards persons, compare as follows with the corresponding figures for the three preceding years:—

,	Year-		Number under trial.	Acquitted or dis- charged.	Convicted,	Committed or referred.	Died, es- caped or tusnsfer- red.	Remaining under trial.	Percent- age of column 4 to total of columns 3 and 4.
	1		2	3	4	5	6	7	8
1892	•••	, ,,,,	68,525	36,852	29,238	700	300	1,385	44
1893		•••	73,721	41,173	80,206	833	318	1,191	42
1894	***		68,508	34,288	31,589	1,012	389	1,230	47
1895	•••		71,974	88,720	35,833	. 1,149	134	1,198	51

The higher ratio of couvietions in 1895 indicated an improvement in the working of the courts. The present ratio closely approximates to that obtaining in the courts of the North-Western Provinces.

Owing to the different kinds of cases tried by Magistrates of the various classes, the percentage of convictions varied greatly in the several grades of courts. The

following figures show the percentage of persons convicted to persons tried, and also the percentage of persons tried by each class of Magistrates :-

		· <u>-</u> ·	convicted whose co	of persons to persons uses were sed of.	tried by	of persons ench class istratos
		į	1894.	1895.	1894.	1895.

Daputy Commissioners under section	30, Act X of 1	882	74:21	70.97	0.43	0.40

Less work was done in 1895 by Benches of special Magistrates and by local and Subordinate Magistrates (Tahsildárs), and more by full power native Magistrates. The higher percentage of convictions attained by the full powered native magistracy is noticeable, as is also the decline in an already low percentage of convictions in cases decided by Honorary Magistrates sitting singly,

Sentences were, on the whole, heavier than in the preceding year. In a larger proportion of cases rigorous imprisonment was awarded, and in a larger proportion of cases the term of imprisonment exceeded six months. Whippings were more frequent and the percentage of whippings actually awarded on all cases in which they might have been awarded rose from 25.26 to 27.35. This is a somewhat higher percentage than that obtaining in the North-Western Provinces.

The number of persons under trial before the courts of Sessions* in 1895 was

* Year.	,	Number under trial,	Acquit ted or discharg- ed.	Con- victed.	Percent- nge of column4 to total columns 3 and 4.

t		Cases brought to trial.	Wit- nesses examin- ed.	Appenls prefer- red.	Revisions prefer- red.
1592	200	438	3,834	3,247	888
1593	•••	535	5,561	3,747	501
1894	•••	593	C,626	8,157	329
1895	•••	654	6,995	3,850	448

larger than in any of the three preceding years, and the percentage of convictions higher. The growth of criminal work in the Sessions courts of Oudh which is seen in the marginal figures † is ton great extent the result of the reorganization of the judicial system of the province, whereby Commissioners were relieved of the office of Sessions Judge. The Lieutenant-Governor and Chief Commissioner expressed the fear that the pressure of criminal work made it increasingly difficult for Judges in Oudh to give that amount of attention to their civil judicial functions which was desirable, and some remedial measure might prove to be necessary.

> The result of appeals to District Magistrates from sentences passed by second and third class Magistrates was nearly the same as in 1894, namely, 66 per cent. of the appellants were unsuccessful. The corresponding figure in the North-Western Provinces for 1895 was 65 per cent.

Sessions couris from sentences passed by first class Magistrates were unsuccessful

to the extent of 77 per cent. against 79 per cent. in 1894. In the North-Western Provinces the corresponding figure in 1895 was 74 per cent.

The increase in the number of revisional applications made to the courts of Sessions is noticeable, 448 being preferred against 329 in 1894, and in 23 per cent of the cases the superior court found interference necessary against 21 per cent. in 1894. These percentages are not materially different from those prevailing in revisional procedure in the North-Western Provinces.

The criminal business in the Judicial Commissioner's court in 1895 was about the same in volume as in 1894. A small decrease in the number of appeals was balanced by an increase in applications for revision. References from the inferior courts were more numerous, while cases called up by the Judicial Commissioner were fewer. The percentage of cases in which appellants were successful was nearly the same as in 1894.

On previous occasions the Government had reason to comment unfavourably on the administration of criminal justice in the courts of Oudh, and to point to circumstances which indicated defective procedure, imperfect knowledge of the law and legal forms, excessive procrastination and weakness of judgment in the subordinate magistracy. The causes were deep-rooted and cannot be suddenly removed. But the results of the year under report are encouraging and afford ground for hope that in nost districts a real progress is taking place.

5.-JAILS.

The following table shows the total number of prisoners of all classes confined in the jails and subsidiary jails of the Province during 1895, and the preceding ten years:—

											
Number of prisoners.	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892,	1893.	1894.	1895.

Number of convicted prison- ers admitted direct.	32,969	36,364	39,978	40,706	42,068	44,694	48,036	40,733	41,164	42,278	48,895

The total number of prisoners admitted increased from 98,982 in 1894 to 113,689 in 1895, and the daily average population increased from 27,947 to 32,667. The number of convicts admitted direct was 48,895, showing an increase of 6,617 on the figures for 1894 and an increase of 15,926 on the figures for 1885. During 1895 bad harvests and high prices told severely on the people, and their effects were seen, as in 1891, in a rapid increase in the jail population. The largest increase in direct admissions occurred in the Bareilly (433), Allahabad (681), Lucknow (360), Azamgarh (505), Hardoi (304), Bahraich (543), Kheri (343), Cownpore (383), and Moradabad (482), jails. The

number of direct admissions to each district jail does not, owing to the operation of various orders in force as to the place of imprisonment of women, lepers, and other special classes of prisoners, accurately represent in all cases the number of persons con-It may, however, be noticed, as a fair index to the relative victed in each district. amount of crime in different parts of the Province, that in the Meerut Division with a population of 51 millions the numbers of direct admissions to jail was 4,010, while its the Rohikhund Division also with a population of $5\frac{1}{4}$ millions the number was 6,644. The increase in the number of female convicts from 2,022 in 1894 to 4,033 in 1895 was no doubt due to the privations to which the poorer classes had been exposed. In 1,620 cases out of the 4,033 the term of imprisonment was for one month or under,.. and in 1,005 cases for over one month, but not exceeding three months. Nearly 3,000 of the 4,083 convictions were on account of house-trespass, theft, and concealment of stolen property. In only 258 cases a previous conviction was proved; and in 124 cases females under the age of 16 were concerned. Commenting on these and other figures of the returns indicative of the special character of the crime of the year, the Inspector-General of Prisons expressed his regret that Indian law contains no provisions similar to those of the English Statute for the conditional release of first offenders. The subject had already engaged the attention of the High Court and of the Local Government, and inquiries preparatory to the submission of proposals for legislation were initiated,

The jails were overcrowded throughout the year, and though frequent transfers were made and a temporary jail opened at Chunar, it was impossible to prevent prisoners accumulating in excess of the accommodation at the disposal of the Department. Exclusive of hospitals and cells, the jails could accommodate only 29,275 convicts. But the average daily strength was 30,575, and the greatest number of convicts in jail on any one day was 35,210.

Jail.	Number which can be accommodated.	Daily average couriets.	The central prisons were full to their ut-

The number of convicts released under the operation of the new Mark Rules again showed an increase. The Inspector-General of Prisons bore testimony to the excellent effect of these rules on the diligence and behaviour of the prison population. This testimony is quite in keeping with the experience of Jail authorities in other parts of India; but from his inspection of district and central jails the Lieutenant-Governor was of opinion that the administration of the mark-system in North-Western Provinces jails might be improved. The rules (Article 1161, Jail Code) provide for the allotment of the following classes of marks namely, (a) marks for good conduct and attention to jail regulations; (b) marks for industry and the due performance of the daily task; (c) marks for special diligence. The marks of classes (a) and (b) are

usually awarded as a matter of course if the prisoner falls under no unfavourable notice. The award of them is therefore more or less automatic. The marks under (c) involve more scrutiny and close supervision. In very few instances did the Lieutenant-Governor find that any (c) class marks had been awarded and as the award of (c) class marks is a good index to the existence of an active and healthy spirit in jail administration, the inference he drew was that there is room for improvement in this respect. Out of 165 death sentences passed on males and 11 on females, 126 and 7, respectively, were carried out.

Of the 48,895 convicts admitted direct during the year, 65 (including 35 natives) were Christians, 6,696 Muhammadans, 42,133 Hindus, and one a Jain. The following table exhibits the ratio of the various denominations confined in jail during the year, and the proportion which they bear to the free population:—

					oportion to whole	Proportion to jail
•			*	P'	opulation.	population.
	∐indus	***	•••	• • • • •	86.2	86 17
	Muhammadans	bee	14.	•••	13 4	13:69
	Christians				0.1	0:14
	Buddhists			•••	0.03	,,,

The proportion of the jail to the entire population of each creed is maintained. No religious denomination is shown to be more criminal than another.

Analyzing the figures by age, it is found that 334 were under 16 years of age, and 36,776 between 16 and 40; analyzing them for education, 2,602 (including four women) were able to read or write; and analyzing them for employment, it is seen that 27,989 were agriculturists. The following tables classify the convicts admitted direct to jail during the past eleven years according to length of sentence, and show the percentage on the total number sentenced for each class respectively:—

In the first three years of the series the ratio of convicts sentenced to imprisonment exceeding six months or to transportation or death was under 27 per cent. In 1895 the ratio had risen to 40°3 per cent. A very considerable increase in the average severity of the punishments inflicted by criminal courts is here indicated. The Lieutenant-Governor viewed with some apprehension the effect which this very perceptible tendency must have to increase the average strength of the convict population, and doubted whether needlessly severe sentences were not unsoldom imposed in trivial cases and in cases in which first offenders were concerned. The subject is under consideration.

The number of juveniles admitted to prison was 210 males and 124 females, against 145 and 69 respectively in the preceding year. These figures in the case of males exclude boys sent to the Reformatory School at Bareilly in lieu of imprisonment. As the school was full, the Government had been obliged to inform Magistrates that no more juvenile offenders could at present be received there. Proposals for enlarging the accommodation were under consideration. There will, however, always be a certain number of boy criminals who are not proper subjects for a Reformatory school; if such are of a degree of criminality to require imprisonment, it is better, in their own true interests, that the sentence should be such as will permit of their being sent to a central prison.

The following table shows the nature of jail offences committed by convicts during 1895, as compared with 1894:—

			popula-	with [by	Offence	es dealt	with by	Superin	tendents.	Pu	Punishments inflicted by Superintendents.					
Υ	čears.		Daily average 1	Offences dealt w criminal courts.	Relating to work.	Relating to prolii- bited articles	Relating to assaults, mutiny and es-	All other breaches of jail raise.	Total.	Minor.	Major,	Total,	Percentage of ma- jor to total pun- ishments.

Though the total number of punishments increased, the increase was confined to minor punishments, the major punishments being 1,383 only against 1,412 in the preceding year. Compared with the punishment statistics of other Provinces, the record in the North-Western Provinces and Oudh is extraordinarily light. Before the jail legislation of 1894 the theory was that this variation was due to a different method of dealing with and recording jail offences: one of the objects of the Prisons Act (IX of 1894) was to prescribe principles whereby the grounds of variation might be removed and more uniformity secured in giving effect to sentences of the courts of justice. While the health of the prisoners should be carefully conserved, jail life should be made as deterrent as possible. It did not appear that the legislation of 1894 had effected any alteration in jail practice in these Provinces. The extraordinarily light record of punishments suggested either that the criminal classes in the North-Western Provinces and Oudh were wonderfully docile (which is known not to be the case); or that jail offences were condoned and not recorded; or, lastly, that in these Provinces jail life was less irksome and jail discipline less rigorous than elsewhere. If the latter explanation be even partly true, it might to some small extent elucidate the problem why the jail population has increased so greatly of late years. The point, which involved the all important one—whether the penal element in jail administration is sufficiently predominant in these Provinces—was the subject of special inquiry.

The following comparative table for 1894 shows that in Bengal 23 minor punishments, and in these Provinces only 3 such punishments, were inflicted per convict:—

		7	Offen	ces des	ılt w	rith by	Superin			1	Punishm	ents in	flicted b	y & որ	erint	cndent	8.			<u>, </u>

Fetters were imposed in only 89 cases, whereas this is the most frequent form of 'punishment in Bengal.

The total expenditure on all heads in guarding and maintaining the prisoners in jails and subsidiary jails, excluding charges for construction and repairs, was Rs. 12,73,752 or Rs. 39-8-7 per head of average strength as compared with Rs. 10,94,660 and Rs. 39-8-0 in 1894. With a daily average of 32,341 prisoners against 27,679

in 1894, a large increase in the expenditure for food was inevitable. The figures in the margin exhibit the classification and amount of the charges in each year. The expenditure on dieting amounted to Rs. 18-5-0 per head of average strength in all jails in 1895. Hospital charges

were Rs. 2-6-0 and eost of clothing Rs. 2-9-0 per head of average strength.

The quantity of grain stored during the year amounted to 242,020 maunds, and a saving of Rs. 88,382 was estimated to have been thereby effected in dictary charges. In the greater number of the jails the amount stored was nearly sufficient for the requirements of their prisoners, but in the district jails of Lucknow, Azamgarh, Mainpuri, Mirzapur, Orai, and Lalitpur the Superintendents must have considerably under-estimated the consumption. In the Moradabad case of defalcation a careful judicial inquiry instituted under the orders of the Lieutenant-Governor proved to the satisfaction of the Government that not only was the grain in stock short of the quantity shown in the books, but that the prisoners had been systematically and fraudulently underfed by the jailor and his subordinates.

Of a daily average of 30,164 convicts sentenced to labour, 11,331 were employed on manufactures against 9,104 in 1894. The net cash carnings of the 11,331 prisoners employed on manufactures amounted to Rs. 2,39,740, giving an average net earning of Rs. 21-2-0 per prisoner so employed; the corresponding figures for 1894 were Rs. 2,10,338 and Rs. 23-1-0. Among central jails the net earnings per prisoner were highest in Allahabad (Rs. 38-11-0) and Agra (31-8-0). Among district jails Saháranpur (Rs. 394-7-0 per prisoner) stood first, but this result was obtained by the extra-mural employment of convicts under conditions opposed to the orders of the Government of India. This was stopped. Good results were obtained in the district

jails at Bareilly (Rs. 32-9-0), Gorakhpur (Rs. 46-8-0), Lucknow (Rs. 26-6-0), Aligarh (Rs. 26-14-0), Basti (Rs. 28-8-0), Muttra (Rs. 35), Hamírpur (Rs. 47) and Dehra Dán (Rs. 35). Orders were issued by Government to all Heads of Departments, instructing them to purchase from the jails at the ordinary jail rates, which would follow market rates, all the articles required for the public service which the jails manufacture. The Inspector-General was also instructed at the beginning of each financial year to prepare and circulate to them a list of all articles which the jails could supply. The Lieutenant-Governor believed that full compliance with these orders would help to reduce the cost of jails to the tax-payers and at the same time make imprisonment more deterrent and prisoners more industrious. In the larger jails, form printing was successfully carried on by the Allahabad Central Jail as a branch of the Government ress, and at Agra and Bareilly carpet and blanket-weaving and munj matting did well during the year. The Inspector-General's proposals for a tent-making industry in the Fatehgarh Central Jail for the supply of tents for Government use were under consideration.

The following statement shows the mortality in the jails of the North-Western Provinces and Oudh amongst all classes of prisoners for each year since the amalgamation of the two Provinces:—

				Daily aver-		Ratio per	Num	ber of d	eaths	Death of ave	rate po	rongth

The mortality in 1895 was 274 per mille as compared with 27.7, the average mortality for the 19 years. There were only 10 deaths from cholera, but dysentery and diarrhea were very prevalent. The mortality among under-trial prisoners was

		per mi	avernge lle of a trength.	verage	Deaths per mille of average strength.		
		1893.	1894.	1895.	1893.	1894.	1895

greater than among convicts, and the admissions of prisoners of all classes into hospital, as the table in the margin shows, were much more numerous than in 1893 and 1894. The year was one of much scarcity among the free population, and

many of the persons admitted to jail were in the last stages of want and emaciation.

•	ļ	1895.	1894.	1893.

" oubsidiary jails.

A jail death-rate of 27 per mille under these circumstances was not surprising. In eight jails and three subsidiary jails the mortality of the conviet population exceeded 50 per mille. Of these the first five are in the eastern districts of the Province, where bad harvests and distress have prevailed

for two years. The extremely high death-rate in the Moradabad jail formed the subject of a special inquiry, which left no doubt in the Lieutenant-Governor's mind that the great siokness and mortality of the last month of the year were in a large degree due to the dishonesty and remissness of the prison staff in respect of the dieting of the prisoners. Suitable notice was taken of the staff's shortcomings. The high mortality in the Banda, Lalitpur, and Karwi Jails was ascribed to the scarcity which prevailed in Bundelkhand. Bánda was always an unhealthy jail. The Sultanpur death-rate appeared to be due to accidental causes. The high mortality in the Dehra Jail, which had prevailed for some years, had in past reports been attributed to the damp situation of the jail, to the unhealthiness of the prisoners on admission, and to other causes. The explanations were somewhat wanting in precision, and further inquiry was ordered. Among the jails which showed a distinct improvement in health, the two combined jails of Gorakhpur deserved mention. The deathrate per mille from all causes among the convict population there was 74.89 in 1891, 87.44 in 1892, 37.91 in 1893, 87.19 in 1894, and 39.82 in 1895. The new and old jails were both occupied during the year, the new jail proving remarkably healthy. The old jail has since been vacated. The Aligarh, Etawah, Bijnor, Etah, and Budaun Jails were also noteworthy for a very low mortality.

The statement in the margin shows that the mortality was highest among convicts

	Death-rate
Not exceeding six months in jail	35 26
Above six months and not exceeding one year	26.02
Above one and not exceeding two	21 84
Above two and not exceeding three years Above three and not exceeding seven	10.36
years Above seven years	22·39 16·93

during the first six months of their imprisonment, and was least among convicts who had been between two and three years in jail. This was what might be anticipated from the indifferent health of the majority of the prisoners on admission and the good sanitary conditions which prevailed in most jails. 61-63 per cent. of the prisoners discharged during the year gained weight,

20.52 lost weight, and 17.85 neither gained nor lost.

• Rupees 1,39,533 were spent on jail construction and repairs, the most important work being the completion of the new jail at Gorakhpur. A number of solitary cells were built in different jails. The provision of separate sleeping accommodation for

convicts has been under the Lieutenant-Governor's consideration, and experiments have been made under his orders to ascertain the best and cheapest form of cubicle that can be constructed in existing sleeping barracks of central prisons. The Lieutenant-Governor trusted to be able to find funds at an early date for actively commencing the policy approved by the Government of India and the Secretary of State—a policy which, it is believed, would have a most beneficial effect in improving the morality and discipline in the jails and in reducing ultimately the prison population.

The Local Committee at Aligarh of the Discharged Prisoners' Aid Society showed a laudable vigilance in investigating every case submitted to them, and made grants-of-aid with discrimination. Inquiries as to the conduct of released prisoners who have thus been aided show that in the majority of cases they were doing well. Whatever success the Aligarh branch may have achieved, much of the credit of it was due to Surgeon-Captain Roberts.

The orders of Government regarding the periodical visits of Commissioners, Magistrates, and Sessions Judges to jails were observed in most districts during the year.

Reformatory.—The school and hospital accommodation remained as it was in 1894, the former being for 232 boys and the latter for 24. At the beginning of 1895, 204 boys were present, while 77 were admitted during the year, giving a total of 281. Out of these, one was transferred to a lunatic asylum, one died, one escaped, and 35 were discharged on completion of sentence. The resultant population at close of the year was therefore 243. The daily average population was 221.58 against 207.87 in the year preceding. The following table compares the figures of the last four years:—

Year,	~~~~		Remaining on 1st January.	Admitted.	Discharged.	Transferred to prison or lunche asylum.	Released by order of Govern- ment.	Escaped.	Died.	Remaining on 31st December.	Daily average strength.
	1895	•••	204	77	35	1		1	<i>J</i> 1	243	221.58
Three years' command.	1894	***	193	65	44	6	4	•••		204	207-87
Three years' compara tive figures.	1893	***	152	55	4.	7	3	,.,		193	172:12
	〔1892 	•••	128	48	7	13	4			152	142-13

The population at the end of 1895 was in excess of the available accommodation, and the Government was obliged to inform Magistrates that until further orders no more boys could be received by the Reformatory. Report was called for whether the accommodation should not be increased in view of the probable requirements of the prevince, and, if so, how this could best and most economically be done.

The Lientenant-Governor accepted the recommendation of the Superintendent, which was supported by the Sessions Judge and the Inspector-General of Prisons that the admission of boys of the thieving caste of Daleras to the Reformatory should be discontinued.

The conditions under which juvenile offenders can be sent to the Reformatory instead of to jail appeared to be better understood by the Courts, as the Government was not called upon during the year in any case to sanction a release or a transfer to jail of an unsuitable subject.

The number of admissions into hospital was somewhat high, but if the very poor condition of most of the boys on admission be taken into consideration, the general health of the institute must be considered generally satisfactory. The weighments

showed, on the whole, that the boys improved in physique. The attempts made to shirk work by gaining admission into hospital through self-inflicted wounds indicated the existence of a bad spirit among the boys, which it should be the strenuous endeavour of the management to remove by every moral agency at its disposal. The discipline of the school during the year compared well with what it was in former years, which were unfortunately marked by grave instances of insubordination and wrong-doing; but there was still ample room for improvement, and the long list of thefts was not satisfactory. The Deputy Superintendent and some of the subordinate staff worked well. The escape of one of the boys led to the conclusion that the warder establishment was numerically weak, and additions to its strength were sanctioned.

The total expenditure was Rs. 9,516-11-3 against Rs. 8,826-10-4 in 1894. The expenditure per head of average strength remained practically the same—Rs. 42-15-0 in 1895 against Rs. 42-7-4 in 1894, an increase of Rs. 1-6-9 per head under the head "Rations" being balanced by small economies under other heads. The financial results of the farm and factories compared well with the figures for 1894, showing a cash profit of Rs. 1,012-11-1 against Rs. 534-14-2 in the previous year. Most of the boys on discharge took to agriculture and gardening. The rule therefore which requires that every boy in the school shall be taught agriculture and a second industry was justified in its results. It was suggested by Mr. Kitts, Sessions Judge of Bareilly, that the local branch of the Prisoners' Aid Society Bareilly might usefully co-operate with the management both as regards finding employment for the boys and taking charge of the gratuity money payable to them on release.

Out of 83 boys who have been discharged since the Reformatory opened, 22 have been completely lost sight of, full reports have been received regarding 46, and 15 are otherwise accounted for. The reports are distinctly encouraging, as in all except two cases the boys are returned as earning an honest livelihood. The Lieutenant-Governor accepted the Superintendent's suggestion that, in order to minimize the not unnatural dislike with which the reports are regarded by the boys, they should be made yearly instead of half-yearly. The rules require that the inquiry is to be made through revenue officials, and not through the police. The Lieutenant-Governor attached great importance to this condition, and desired that Magistrates would, as far as possible, have the inquiry made by tahsildárs themselves, and not through subordinate tahsil officials.

6.—CIVIL JUSTICE.

(a) North-Western Provinces.

THE following table shows the course of judicial business in all courts of original jurisdiction, except the courts of village munsifs, for the last six years:—

			Suits insti- tuted.	Total for dis- posal, includ- ing remands, reviews, and revivals.	Disposed of.	Pending.	
1890	 9,50 9		93,684	106,447	95,553	10,894	
1891	 •••	,	88,251	100,983	90,291	10,692	
1892	 		95,193	107,725	96,765	10,960	
1893	 ***		95,056	107,910	96,649	11,261	
1894	 *24		89,180	102,145	90,156	11,989	
1895			92,095	106,205	96,345	9,860	

Notwithstanding the great increase in institutions, the pending file was generally reduced. An additional munsif was at Ballia for almost the whole year; another at Benares until the vacation; another at Meerut for some months towards the end of the year, being transferred from the Farukhabad Judgeship. A munsif was deputed also for two months from Mirzapur to Deoria in the Gorakhpur district. The only noticeable increases in the pending file were at Agra and Aligarh; in the latter district there were eight munsifs at the end of 1895, and only five at the end of 1894.

There was a general increase of institutions throughout the Doab and Rohil-khand, which is commonly ascribed to fear of the introduction of the damdupat rule regarding interest.

The suits instituted in regular courts were thus classified in comparison with those instituted in 1893 and 1894:—

				1000	700-6	2000.
For money or moveable pr	operty	•44		69,377	62,604	64,495
For immoveable property		• • •		12,434	11,303	9,636
Mortgage suits	,,,	***		8,903	11,275	13,805
For specific relief				1.958	1,775	2,242
To establish a right of pre-	emption	***	***	1.772	2,676	1,447
		•••	***	612	547	470
Other suits	141	•••	•••			
		Total		95,056	89,180	92,095

The registration was improved, and the classification is believed now to be fairly accurate. The correction of the returns has made an apparent addition to the institutions of mortgage suits.

The values of the subject-matter in dispute in regular courts during, the last six years have been—

```
    1890 ...
    ...
    2,77,15,803
    1893 ...
    ...
    2,65,42,173

    1891 ...
    ...
    228,59,300
    1894 ...
    ...
    2,66,80,427

    1892 ...
    ...
    2,58,85,331
    1895 ...
    ...
    3,74,40,643
```

One big money suit was instituted in the court of the Subordinate Judge of Mo-radabad for Rs. 1,07,53,088.

The percentage of contested suits to suits disposed of was 30 against 28.9, 29, 28.3; 28.5, and 29 in the five preceding years.

Plaintiffs were successful in 58·1 per cent. of suits against 56·6 in 1894 and 56·8 in 1893.

The ave age duration in contested cases fell from 82 to 79 days, all courts except those of Subordinate Judges contributing to the fall. The duration in Small Causer Courts fell from the unusually high figure (47) of 1894 to the normal amount of 37 days.

In uncontested cases the duration remained at 35 days.

The number of witnesses summoned, of witnesses examined, and of parties examined during the last three years may be thus compared:—

				1893;	1894.	1895.
Witnesses sun	amoned	***	***	262,490·	249,771	250,707
Ditto exa	mined	•••	•••	114,526	106,247	112,978
Parties (lîtto	***		25,248	26.868	30 122

The increase in examinations and in the summoning of witnesses apparently followed the rise in institutions. But registration was not entirely reliable in some courts.

The amount of diet-money paid to witnesses was as follows:-

```
Rs. Average per witness.

1893 ... ... ... 1,43,767 ... 9 nnnas 9 pies.

1894 ... ... ... 1,48,370 ... 10 ,, 11 ,,

1895 ... ... ... 1,57,293 ... 10 ,,
```

The figures of miscellaneous judicial cases for the last six years are as follows:----

```
    1890
    ...
    ...
    ...
    33,859
    1893
    ...
    ...
    ...
    54,714

    1891
    ...
    ...
    ...
    47,469
    1894
    ...
    ...
    ...
    48,508

    1892
    ...
    ...
    53,961
    1895
    ...
    ...
    ...
    46,777
```

The number of contested cases disposed of fell by 658, and there were 490 fewer cases pending at the end of the year than at the beginning. The average duration in contested cases was 43 days against 45 in the previous year, and in uncontested cases 28 days, the same as in that year.

Details of duration in contested cases for three years in the different courts are these:--

				1893.	1894.	1895.
				Days.	Days.	Days.
Munsifs' Courts	(41	101	•••	42	40	41
Small Cause Courts	***	•••	***	36	37	30
Subordinate Judges' Courts	•••	***	493	62	53	56
District Judges' Courts		•••	***	109	101	98

The work of executing decrees in the past six years has been as follows:—

Applications for execution.

					_			
•				F.	or disposal.	Disposed of,	Pending in the Civil Courts.	
	1890	111		414	105,516	89,180	16,386	
	1891	414			99,415	82,312	17,103	
	1892	•••		•••	100,093	83,866	16,227	
•	1893		***		100,035	86 299	13,736	
	1894	• **	44+	***	89,035	76,226	12,809	
	1895		***	•••	91,488	77,955	13,533	

The above table shows as pending only those cases in which proceedings were in progress in the Civil Courts—not those in which decrees had been transferred to the Collector.

The realizations continued to fall. The decrease amounted to Rs. 2,24,964.

The percentage on the applications disposed of by the courts of proceedings fructuous wholly or in part, was lower than in 1894:—

```
    1890
    ...
    ...
    39·2
    1893
    ...
    ...
    49·2

    1891
    ...
    ...
    46·3
    1894
    ...
    ...
    46·9

    1892
    ...
    ...
    46·6
    1805
    ...
    ...
    42·9
```

But in several districts the results of proceedings of Collectors were not always registered. This omission was brought to the notice of all courts, and the necessary directions issued.

A larger number of judgment-debtors were arrested than in the previous year; the number imprisoned also increased by 62. Sales of immoveable property decreased by 66, and those of moveable property increased by 119. The comparative figures are—

				1893.	1894.	1895.
Judgment-debi	tor imprisoned	•••	+94	483	464	528
Ditto	arrested	***	***	1,541	1,480	1,418
Immoveable property sold		***	•••	6,749	5,182	5,116
Moveable	ditto	***	134	1,913	1,616	1,735

Of 6,197 decrees that were transferred during the year to other courts for disposal, 5,071 were cases that were transferred to Collectors under section 320 of the Code of Civil Procedure for action against the judgment-debtors' ancestral property. In 1894, 5,380 cases were so transferred out of 6,986 in all transferred. Such cases were most numerous in 1895 in the following districts:—

		Number			Number.
Gorakhpur	41	796	Aligarh	***	380
Mampuri	***	417	Shábjahánpur	•••	365
Saháranpur	***	416	Meerut	114	352
Gháziour	***	401	Agra	***	326

Aligarh and Gházipur show small increases; all the other districts show decreases more or less considerable.

The following figures show the state of the appellate files of all subordinate courts for the last five years:—

						Cases.	
					For disposal.	Disposed of.	Pending.
	1891	'	•••	•11	17,140	10,658	6,462
	1892		***	•••	16,147	10,602	5,545
	1898	* \$4	***	į	16,264	9,812	6,452
•	1894		***	. 10	16,017	10,824	5,198
•	1895	4+4	***	141	14,064	9,927	4,137
					13		

Of the 9,927 appeals disposed of the details are—

	r		From		
	Ŕ	decrees.	Subordinate Judges' decrees.	Munsifs' decrees.	Total.
By District Judges	***	1,164	1,659	1,818	4,641
"Subordinate Judges		•••	•••	5 ,05 7	5,057
" Small Cause Court Judges with	urisdiction				
of Subordinate Judges	•••	***	***	22 9	229
	Total	1,161	1,659	7,105	9,927

* The District Judges decided 137 fewer appeals from Courts of Revenue, 291 more from Subordinate Judges, and 128 fewer from Munsifs than in 1894.

During the first quarter of the year the Judge of Meerut had the help of an Additional Sessions Judge, and for the rest of the year he was relieved of the work of the Bulandshahr district, which was made over to the Aligarh Judgeship. The criminal work was thus reduced, and the Judge had more time for civil work.

The average number of appeals decided by the court of a Subordinate or Additional Subordinate Judge was 241 against 299 in 1894. There were temporary Additional Subordinate Judges at Sahavanpur for three months and at Cawnpore for four months. There were thus 21 courts of Subordinate Judges hearing appeals during the year against 22 during 1894.

Details of appeals pending over three months at the end of each year are these:

			1892,	1893.	1894,	1895,
Before Subordinate Judges	***	***	420	426	1,076	491
" District Judges	***	***	729	1,075	2,332	1,536
		-				-
	Total	1	,149	1,501	3,408	2,027
		-				

The great reduction in these long-pending appeals was a most satisfactory result of the year's work.

The durations of appeals decided by Subordinate and District Judges compare thus with those for 1894—

	61 13 3 15				1894.	1895.
Subordinate Judges	(in the deciding a	court	•••	***	100	182

	,				· - -	102	6.2

Sixty-eight appeals were summarily rejected against 70 in 1894.

The number of objections under section 561 for the past five years has been 504, 380, 425, 562, and (1895) 515.

During the last five years the miscellaneous judicial appeals have varied thus:-

					Number for disposal.	Number	_	
1891	***	•••	4+4	***	1,120	disposed of.	Pending.

Execution of decrees	***	•••	29	142	163
Miscellaneous cases				17	18

In Banda the Judge had 40 days for civil work, in Bareilly 41 days, in Farnkhabad 93 days, and in Mainpuri 75 days. The increase of the number of days available for civil work in the Meerut and Farnkhabad Judgeships (43 to 184 and 30 to 93) was due to the transfer of two Munsifis, the criminal work of one district from Meerut and of the criminal work of one district from Farnkhabad to Aligarh on 1st April 1895.

The High Court observed that a distinct improvement in the work of the Civil Courts was visible. With a larger file to cope with, the courts left fewer cases undisposed of, and that, too, notwithstanding an increased proportion of contested cases. Greater expedition in disposals was accompanied by a more extended examination of parties and witnesses, and did not injuriously affect the character of the work so far as that could be judged by the results in appeal. The High Court believed that the improvement was real and permanent. The local limits of jurisdictions were revised, or an entirely different allocation made, in cases where particular courts were lightly or heavily worked; and where temporary relief only was required, it was afforded by the deputation of officers from more lightly worked posts, or the establishment of temporary additional courts.

The following table shows the state of the civil business which came before the High Court during 1894 and 1895:--

	Institutions with pending file of previous year.		Disp	osals.	Pending at the close of the year.

During the year 1895 the Judicial Committee of the Privy Council determined five appeals from the Court. In one the decision was modified; in three reversed; one appeal was dismissed in default of prosecution. In three cases the Privy Council granted special leave to appeal in cases in which the Court had refused to allow an appeal.

The average duration in days of the cases decided by the Court was as follows:-

				3	1893.	1894.	1895.

One hundred and thirty-three second appeals were summarily rejected in 1895 under section 551 of the Code of Civil Procedure as compared with 78 in 1894.

Of contested first appeals in 63·1 per cent, the decrees appealed against were confirmed as against 66·5 per cent, in 1894. In second appeals the percentage was 70 as against 74·3 in 1894.

The court-fee stamps received in subordinate courts during the last three years have had the following values: Rs. 16,87,860, Rs. 15,72,788, and (in 1895) Rs. 16,37,558. The most striking increases in districts were those of Rs. 62,634 in Aligarh and Rs. 21,516 in Bareilly. The distinction between ad valorem fees and fixed fees was better understood in 1895. In the High Court there was a fall of Rs. 12,508 under this head. Refunds in the High Court were Rs. 5,889 against Rs. 5,890 in 1894. The examination in the Court's office of documents liable to court-fees led to the realization of deficient fees to the amount of Rs. 5,209-12-0 against Rs. 2,839-10-0 in 1894.

The beginning of the year 1895 saw the experiment in four districts of the establishment of village munsifs' courts. The areas selected were the following:—

Civil District.		Revenue Distri	ict.	Tahsil.
Moradabad		Bijnor	••	Bijnor except parganas Chandpur and Basta.
Meerut		Mcerut	***	Bághpat.
Saháranpur	441	Muzaffarnagor	••	Muzaffarnagar except pargana Gurdhaupur.
Sháhjahánpur		Sháhjahánpur	***	Tilhar.

The principles upon which the division into circles was effected varied greatly; in the several areas the number of Munsifs appointed was 9, 8, 126, and 46 respectively. In the Bijnor district one Munsif resigned his post soon after appointment, and four others did no work; in Saháranpar 39 were illiterate; in Sháhjahánpur two appeared to have done no work, as no returns regarding them were received.

Taking the returns as they stand, they show that 9,027 suits were instituted, nearly one-half being in Sháhjahánpur and one-third in Muzaffarnagar. There were very few in Bijnor. Allowing for revivals and for cases transferred to the courts of the regular Munsifs, there were in all 8,846 suits for disposal: of these 248 remained pending at the end of the year. Of those disposed of—

```
780, or 9 per cent., were disposed of without trial.
6,698, or 78 per cent., ditto ditto contest.
1,120, or 13 per cent., ditto with contest.
```

Over one-half of those disposed of without contest were settled by compromise or by oath. Of the remaining cases the plaintiff was successful in more than three-quarters. In 802 contested cases also the plaintiff was successful. The courts appear from these figures to afford a means for recovering, or at all events registering, petty debts, which are mainly, it would seem, not disputed.

One-half the suits were suits on oral contract; the only other numerous classes being suits "on account stated," "for price of goods sold," and "on written contract." It only 168 of the cases did the courts exercise their jurisdiction, which exists by consent of parties, in suits of the value of more than Rs. 20.

(b)—Oudh.

The receipts from court fees (other than process fees) were Rs. 5,50,102 in 1895 against Rs. 4,99,108 in 1894 and Rs. 5,31,489 in 1893. The increase on the receipts

	1893.	189 4 .	1895.

Over Rs. 100 and not exceeding Rs. 1,000.	6,809	5,872	5,974
Exceeding Rs. 1,000	810	803	892
• Total	6 0,013	55,939	57,580

for 1894 was due to the institution of a few suits for exceptionally high values, and to larger sums realized on probates and letters-of administration and certificates. The bulk of the litigation was, as in former years, concerned with sums of very small values. Eighty-eight per cent. of the suits* instituted were for values not exceeding Rs. 100.

The number of suits instituted was slightly in excess of the institutions in 1894, but below those of 1893. The striking feature in the figures of the year was the large increase in the number of suits instituted in Courts of Small Causes and a more than equivalent decrease in the number instituted in the regular courts. In the table below statistics for the last six years are given, with corresponding figures for the North-Western Provinces added for the purpose of comparison:—

	. 1890.	1891.	1892.	1893.	1894,	1895.
Ordinary suits Small Cause Courts suits. North West- orn Provinces. Small Cause Courts suits.	35,045	26,003	28,236	26,486.	19,818	15,986
	25,058	34,838	31,543	33,527	36,121	41,644
	76,191	63,847	69,758	68,888	65,002	67,545
	18,553	24,404	25,440	26,168	24,178	24,650

The increase in the number of suits disposed of under the Small Cause Court procedure was accounted for by the extension, since the middle of 1894, of the Small Cause Court jurisdiction of Munsifs. There was no corresponding increase in the number of suits instituted in Oudh for money or moveable property, the number being returned at 52.763 in 1890 and at 50,452 in 1895. As every permanent Munsif in Oudh has now powers of a Court of Small Causes throughout the local limits of his jurisdiction for values not exceeding Rs. 100, and as the vast majority of suits instituted for money or moveable property are well within this limit, the number disposed of in Oudh as Small Cause cases was necessarily large. The comparatively small number so disposed of in the North-Western Provinces is due to two reasons. In the first place, the proportion of cases instituted in the North-Western Provinces for money or moveable property to the total litigation was relatively much smaller than in Oudh, the proportion being 70. per cent. against 87 in Oudh. In the second place, in the North-Western Provinces, only selected Munsifs are recommended by the High Court for Small Cause Court powers. The great extension of the Small Cause Court procedure in Oudh was tentatively made on the recommendation of the Judicial Commissioner as part of a scheme for relieving Subordinate Judges of the trial of unimportant original suits, and thereby enabling them in turn to relieve the District Judges in the trial of large value original suits and of appeals from Munsifs' decisions. This policy has had some success in reducing the block of business which existed two years ago in the District and Subordinate Judges' Courts. But the amount of work which has been thrown on the Munsifs is very great, and it is possible that without extensive Small Cause Cours powers they would not have been able to dispose of it.

53

The statistics of original suits in the several classes of courts are contrasted below with those for 1894:—

			Original		Miscellaneous cases.

those for 1894, the pending file was somewhat larger at the end of the year than at its commencement. Not-withstanding the decrease in the number of regular suits instituted in 1895, there was an increase in the number of this class of suits pending at its close. An unsatisfactory feature was the considerable increase in

the average duration of suits of all classes. The contrast between the figures for Oudh and for the North-Western Provinces* was brought to the notice of the Judicial Commissioner.

There was a considerable decrease in the number of appeals before the subordinate appellate Courts, but an increase in those before the Judicial Commissioner's Court. In the following statement the arrears at the commencement of each year as well as the appeals instituted during the year are included:—

	Total number of appeals ,before the Courts.					Pending on 1st January,				
`	1891.	1892.	1893.	1894.	1895.	1892.	1893.	1894.	1895.	1896.
				`					<u> </u>	
District appellate Courts other than the chief courts of districts.	1,548	1,384	2,075	3,572	2,943	412	315	938	876	597
Chief appellate courts of districts,	2,396	2,956	3,110	2,346	1,432	1,245	1,822	2,103	1,279	672
Judicial Commissioner's Court	L,216	1,032	1,014	1,297	1,950	532	531	571	889	1,443

The reduction in the pending files in the subordinate Courts at the close of 1895 was satisfactory. This resulted less from a large outturn of work than from a decrease in institutions. The Courts were able to dispose of appeals standing over from former years. In the Judicial Commissioner's Court arrears continued to increase, and measures for improving the efficiency of the highest tribunal in Court

In 51 per cent. of the contested appeals disposed of in 1895 by the subordinate appellate Courts the judgment of the lower Court was confirmed. In the North-Western Provinces in 1895 the percentage was 61. The comparison is unfavourable to Oudh, and indicates the weakness of the Courts of first instance in that Province.

The returns of the work done by Subordinate Judges and Munsifs in 1895 indicated that Subordinate Judges in Ondh, since the revision of the jurisdictions of Munsifs in 1894 and the conferment on them of summary powers throughout the local limits of their respective jurisdictions, had not only ceased to be overworked, but were probably underworked. The following figures show the great difference which has resulted from the changes referred to in the work respectively of Munsifs and Subordinate Judges in Oudh, and compare this work with the work of corresponding Judicial officers in the North-Western Provinces:—

Average disposals of an Oudh Subordinate Judge.

				Small Cause Court suits.	Regular suits,	Regular appeals.	Miscellancous cases.

Compared with the Munsif of the North-Western Provinces the Munsif of Ondle was heavily worked, and compared with the Subordinate Judge of the North-Western Provinces the Subordinate Judge of Oudh was insufficiently worked. The attention of the Judicial Commissioner was invited to the subject, and he was asked to favour the Government with his opinion upon it.

The work done by District Judges in Oudh in each of the last five years is shown in the subjoined table:—

			Original	Miscel-	Арр	eals.			Criminal applications for revision.

* Disposed of by the Additional Judge of Lucknow.

Besides the six Judges sanctioned for Oudh, an Additional Civil Judge was entertained in the Lucknow Judgeship from the middle of the year 1893, to assist the District Judge in disposing of long-pending heavy suits of large values. The

work done by 'him is included in the figures above given for 1893 and 1894. For 1895 a special return was obtained from the Judicial Commissioner. Excluding disposals by the Additional Judge, the amount of civil work done by the District Judges in Oudh was very small and tended to decrease. The criminal work had undoubtedly increased; but the Lieutenant-Governor and Chief Commissioner doubted whether this in all cases was a sufficient explanation. The Judicial Commissioner was requested to see that civil work was not transferred to Subordinate Judges which, regard being had to the criminal work of the Sessions Division, the Judge might reasonably be expected to himself dispose of.

The amount of civil business disposed of in the Court of the Judicial Commissioner was considerably in excess of that for the preceding year, the disposals under all heads aggregating 1,335 against 979 in 1894. The institutions, however, were much in excess of the disposals, being 2,055: and on the 31st December 1895 there were 1,957 cases pending against 1,237 at the close of 1894. Of these, 195 were first appeals, and 1,248 were second appeals, from decrees. The average duration of cases in the Judicial Commissioner's Court was about the same as in 1894, being nearly two years in the case of first civil appeals, and one year in the case of second civil appeals. The question of relieving the block in business in the Judicial Commissioner's Court was engaging the attention of the Government.

Commissioner's Court	1	,,,		7-4	127	102	9	1				

that in 1894 :--

The increase in original suits and in appeals before Deputy Commissioners against orders in suits, and the slight decrease in appeals in the Commissioner's Court, are noticeable. In Almora and Garhwál the whole increase in original suits was stated to be due to the provision in the new rules which requires that certain cases formerly treated as revenue cases should be classified as civil suits. The same cause appears to have governed the increase in miscellaneous suits in these districts. To this extent the general increase in original suits is nominal, and has thrown no extra work on the district staffs.

Appeals from Subordinate Courts are now heard by Deputy Commissioners instead of by the Commissioner. The decrease in the Commissioner's appellate work from 127 to 102 cases for disposal is thus less than might have been expected. It would seem that the conditions of section 584, Civil Procedure Code, defining the grounds of second appeal, are not yet fully understood by litigants, who file appeals in the Commissioner's Court on the usual grounds for first appeal, only to find in many cases that their applications have to be summarily rejected. This circumstance partly explains the decrease in the average duration of appeals in the Commissioner's Court from 105 days in 1894 (an abnormally high figure) to 33 days in 1895.

Appeals before the Deputy Commissioners of Almora and Garbwál almost doubled, while the number of those before the Deputy Commissioner of Naini Tal has remained stationary. The fact suggests that the new rules, in supplying outlying districts with local Appellate Courts, have tempted litigants to take up many cases on appeal in which, under the old rules, they would have preferred to accept the finding of the lower Court rather than proceed to the headquarters of the Division. As, however, one in four of the decrees appealed against was reversed or modified in Garhwál and one in five in Almora, the new rules would seem to meet a necessity. The total number (34) of miscellaneous appeals in the division was small, and the variations in the figures relating to them were probably to a large extent accidental.

The number of original suits for disposal at the commencement of the year was 525. The pending file at its close was 532 cases, as shown in the table subjoined:—

			Origina	l suits.		eneous its.	A	verage duration of suits.			
District.			Disposed of.	Pending at and of the year.	Disposed of,	end of		estad.	Uncontested.		
						the year.	1894.	1895.	1894.	1895.	
Naini Tal	***		1,605	220	350	32	58	57	37	39	
Almora	•••	•••	2,271	181	244	17	41	42	25	31	
Sarhwál	***	1 50	1,665	131	27	1	66	82	49	36	
	Total	•••	5,541	532	601	50	,		•••		

The general result was satisfactory considering the increase (partly nominal, however, as explained above) in disposals from 5,009 in 1894 to 5,541 in 1895; but in Naini Tal, owing to remediable administrative mismanagement, the result was less satisfactory than in the other districts.

In Naini Tal the pending file showed an increase of from 204 to 252 undecided original suits. The same district in applications for execution of decrees showed an increase of from 223 to 288 pending cases. The defects disclosed by these figures were engaging the attention of the Commissioner.

The figures for duration of eases and for the numbers of witnesses heard in them varied considerably in Garhwal from those of previous years. This was attributed to greater accuracy in preparing the returns. The duration of appeals was somewhat excessive in all the District Courts, the figures comparing unfavourably

District.

Average
duration in days.

1894. 1895.

* Naini Tal ... 29 39
Almora ... 23 68 a despatch which was creditable on the whole to the Garhwal ... 22 31 Courts. The chief defects in the work of these to find a definite decision on every issue, and occasional non-observance of the technical requirements of the Civil Procedure Code.

The percentages of cases disposed of after contest remained practically the sam as in last year in each district. There were only three suits, all in Naini Tal, involving sums above Rs. 5,000. One of these was tried by the Deputy Collector in charge of the Bhábar (specially empowered to try the case) and two by the Deputy Commissioner.

The following table shows the success attending the execution of decrees in each district of the division:—

District.	Numbe dispo			ober sed of.	Percenta provod infruct	wholly	which were ful	Percentage in which decrees were fully executed.		
	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.	1894.	1895.
Nairfi Tal Almora Garhwâl		1,138 1,086 498	982 1,042 399	850 985 404	47 42 57	47 46 37	21 19 27	19 26 38	Re. 54,892 35,888 6,659	Rs. 40,947 18,940 10,988
Total	2,815	2,722	2,423	2,239	47	43		27	96,939	70,875

It was remarked that in Naini Tal, with its large trading community resident at headquarters, the percentage of decrees fully executed was only half the percentage for Garhwál, where various causes combine to make execution difficult. This was said to be partly due to bad harvests in the Bhábar, where the percentage of decrees fully executed was only 11.63 per cent., the percentage for decrees of the local Naini Tal Courts being 24.31 per cent.

7.—Infanticide.

North-Western Provinces and Oudh,

The principal figures for the year under review may be thus summarized. On the 1st April 1895 the Act was in force in 567 villages in 20 districts. The opening population was 86,692, of which 7,211 were boys and 5,122 girls under the age of six. During the year two villages in the Fatehgarh and five in the Jaunpur district

BIRTHS.	
Boys.	Girls.
+ 2.054	+ 1,831
Deaths (under six). — 857	- 820
Removale (under six). — 854	— 664
Arrivals (under six). + 652	+ 584
Transfers to population (over six). — 1,306	- 808

were exempted. On the 1st April 1896 the juvenile population under six years of age on the result of births, deaths, removals of families, and transfers stood at 6,900 boys and 5,245 girls, and the proportion of boys to 100 girls fell to 131, having been 140 at the beginning of the year. This improvement was thought to be mainly the effect of transfers of children at the close of the year

to the population over six years of age, and the reason why so many more boys than girls

			Boys.	Girls.
Under one ye	ar	***	2,003	1,781
One year		••	1,545 1,491	1,396 1,218

Four do.	•••	•••	1,264 1,354	816 825
Five do.		***	7,000	320

were thus transferred was apparent from the figures marginally given (Appendix III) showing the distribution of the juvenile population during the year before the transfers were made. The disproportion between the sexes shown in this table

is much less marked among the children under three years of age, and this is the direct effect of the Act, as many villages at present under it were proclaimed three years ago, and had at the time of proclamation about one girl only for every two boys.

The birth and death statistics* of the proclaimed population went to show that

5.46

* Berths.

Percentage of male births to total births ... 52:87

Ditto female ditto ... 47:13

Deaths.

years to girl population between those ages,

comparatively little direct infanticide exists, though, owing to carelessness and neglect, the mortality was higher among girls than among boys. The proportionally greater number of boy births is in accordance with the general birth statistics of India.

Of the 20 districts in which the Act is in force, the population under its operation

† Bareilly. Sháh jahán pur. Cawu pore. Fateh pur. Jaonpur. Gházipur. Ballia. Basti. was below 1,000 in eight districts.† In Bareilly, Sháhjahánpur and Cawnpore the repressive action of the law appeared still to be needed. In the other five districts

infanticide as a recognised crime was held to have died out, though the statistics were on too small a basis for safe conclusions to be drawn from them. In threet other

‡ Budaun.

Jalaga.

districts the proclaimed population was under 1,600. In Budaun and Hamirpur some villages were said to require

watching, but Jalaun was thought both by the Magistrate and the Commissioner to have freed itself from suspicion. In the remaining nine districts the Act affected considerable bodies of people. In Saharanpur, which has the largest population under rules, the Magistrate and the District Superintendent of Police considered that the law had worked good effects. In Muzaffarnagar the statistics improved. In Meerut the Magistrate was in favour of relieving villages from the operation of the Act. In the five districts of the Agra Division infanticide, in the opinion of the Commissioner, prevailed in the proclaimed villages, and greater activity in enforcing the penal provisions of the law was advocated by him. In Bijnor, where the practice was once widely prevalent, the figures showed a distinct improvement.

The district reports showed that the working of the Act received very varying degrees of attention in the several districts. In Saháranpur and Meerut supervision was close and continuous. In most districts of the Agra Division defective inspections and remissness on the part of the Police authorities were severely noticed by the Commissioner. The indiscreet practice of requiring a post mortem examination to be held as a matter of course on the dead body of every female infant was properly stopped in the Etah district.

It was observed no attempt was made to introduce the system which has been followed in Saháranpur ever since the year 1893-94 into any other district with the single exception of Hamírpur, though attention had been annually directed to the salutary provision of section 6 of Act VIII of 1870. In the Saháranpur district out of 51 children removed to the headquarters dispensary the lives of 16 were preserved.

The exemption of clans or villages from the operation of the Act was made the subject of separate references to Government if, after consultation with the District Officers, it appeared, on scrutiny of the resultant population, that the existing disabilities could with safety be removed.

8.—Litigation to which Government was a party.

North-Western Provinces and Oudh.

otate intigation.—The State was plaintiff in Courts of first instance in 29 suits, of which it won 12 (including two, in which over Rs. 10,000 was claimed), and lost one unimportant case, in regard to which an appeal was filed. As defendant out of 68 suits, the State successfully defended 29, including two, in which the value of the claims was over Rs. 10,000, and lost seven, none of them involving large sums. Appeals were lodged by Government in five of these cases.

In appeals the State won one and lost three as appellant, and won seven and lost two as respondent. Second appeals were lodged in regard to four of the five adverse findings in first appeal. Seven references under the Land Acquisition Act were decided.

Of these, only three awards of Collectors were upheld and four were enhanced, including two in which awards, aggregating Rs. 4,809-13-9, were enhanced, under a compromise effected in the High Court, to Rs. 15,216-14-4.

The total value of claims in decided cases in which the State appeared as plaintiff or appellant was Rs. 55,630-15-6, of which 98·1 per cent. was decreed—a remarkable result, considering the large amount of litigation involved. In cases in which the State was defendant or respondent, 3·9 per cent. of claims, amounting to Rs. 69,242-12-1, were decreed against Government as compared with under 1 per cent. in the preceding year.

Court of Wards.—The following statement summarizes the results of original suits to which the Court of Wards was a party:—

Court of Wards as plaintiff.		Cases decided.	Cases decreed,	Value of claims.	Amount decreed for the Court of Wards.
North-Western Provinces		35	32	Rs. 15,171	Rs. 14,970 or 98 per cent.
Oudh	•••	37	31	17,025	15,490 or 90 ditto:
Total	•••	72	63	32,196	30,460 or 94 ditto.
Court of Wards as defendant.		Cases decided.	Cases dismiss- ed.	Value of claims.	Amount decreed against the Court of Wards.
		Ì			
North-Western Provinces		9		Rs.	Bs.
North-Western Provinces Oudh	111	9		Rs. 3,28,490 15,532	Rs 4,800 or 30 per cent.

Of the 12 cases lost, 3 were subsequently won on appeal.

One suit instituted by the Court of Wards was subsequently withdrawn.

Of the 26 cases successfully defended, one relating to the Chaube Sadhari Lal estate, Cawnpore, involved a claim for three lakhs. It was decided on a technical point, and the plaintiff filed an appeal to the High Court.

Of 41 appeals in District Courts, 18 were won by the Court of Wards and 6 lost. In regard to only one of the latter was it thought advisable to appeal. In second appeals the Court of Wards out of 49 cases won 11 and lost 5, one of which was to be the subject of further appeal to the Privy Council. One was withdrawn by the Court of Wards as appellant.

The pecuniary results were again satisfactory, though not quite equal to those of the preceding year: 75.1 per cent. of claims, aggregating Rs. 59,057-6-3, were decreed to the Court of Wards as plaintiff or appellant against 81.4 per cent. in 1893-94; while 6.21 per cent. of claims, amounting to Rs. 5,09,953-6-8, were decreed against the Court of Wards as compared with 79 per cent. of over 20 lakhs in 1893-94.

Municipalities.—Of the few cases entrusted to the Legal Remembrancer's Department by Municipal Boards, the Boards concerned won 6 and lost 4: the remaining 11 being left pending at the close of the year.

Realizations.—The following table shows the comparative success obtained in the realization of dues in the year under report and preceding years :-

		Total demand.	Realized.	Pere	Percentage realized.		
		1894-95.	1894-95.	1894.95.	1893-94.	1892-93.	
		Rs. a. p.	Rs. a. p.				
State-				ſ]	•	
North-Western Provinces	711	15,186 9 3	1,7 78 13 6	11.7	20.9	8.6	
Oudh	•••	1,381 2 9	544 0 9	39.3	13.1	74.3	
Total		16,567 12 0	2,822 14 3	140	20.4	14:3	
Court of Wards-					}		
North-Western Provinces	•••	1,46,977 6 8	14,462 2 8	98	5.9	20.5	
Oudh	***	57,866 3 10	3,852 13 10	66	25.8	31.4	
Total		2,04,843 10 6	18,315 0 6	8.9	108	24.9	
GRAND TOTAL	•	2,21,411 6 6	20,637 14 9	93	11.5	23'3	

The results generally are liable to great variation, but those for the year under report were not considered satisfactory. In particular, as regards the Court of Wards,

Bindesri Prased estate— Balance Rs. 48,450-14-0, of which Rs. 17,404 was said to be doubtful.

Gauri Shankar estate

Balance Rs. 25,044-2-10 (Rs. 25,348-4-1 doubt-

Surajpur estate— Balance Rs. 16,270-7-10 (recoverable).

it was noticed that the three estates (marginally noted) which showed the largest balances, appeared at the head of the list last year in the same order. More energetic measures for the realization of these balances were enjoined. In State

litigation the amount realized was 40 per cent. of the amount expended in litigation as against 28 per cent., in the preceding year. For the Court of Wards the figures were 49 per cent. and 47 per cent. respectively.

Government dues in pauper suits.—The figures bearing on pauper suits are given in the following table :--

		Stamp dues.	Costs.	Total.
		Rs. a. p.	Rs. E. p.	Rs. a. p.

Remitted	***	38 per cent.	26 per cent.	cent. last year. 37 per cent. against 39 per cent. last
Outstanding	***	49 per cent.	60 per cent.	year. 50 per cent. against 45 per cent. last year.

9.—REGISTRATION.

The features of principal interest in connection with the registration agency during the period under review were, first, the progress effected in the policy of substituting, as far as possible, departmental for ex officio Sub-Registrars; and, second, a complete reorganization of offices in the Province of Oudh. The first measure had long been

considered theoretically desirable. Only 54 ex officio Sub-Registrars remained, and they for the most part were in charge of unimportant registration sub-districts where the receipts were not large enough to pay for a separate officer. The second measure resulted in a reduction in the total number of offices in the North-Western Provinces and Oudh from 337 to 289, and of officers from 337 to 293. The increase in the number of documents registered, and especially in the number of those the registration of which is optional, showed that the public had in no way been inconvenienced by the reduction of offices. It was considered unfortunate that this reform, the necessity of which was partially recognised as far back as 1883, should have been delayed by technical irregularities, which involved the reopening in 1891 of 20 offices proved by experience to be superfluous and the passing of Act No. IV of 1894 by the Local Legislature to validate the registration of documents in illegally-constituted sub; districts. The sub-districts in Oudh appeared to be conveniently constituted, and the expedient of joint offices, of which no less than 23 had been created in that Province, gave additional facilities to the public.

The efficiency of Sub-Registrars much depends on the frequency and minuteness of the inspections of their offices, and it was a matter of regret that the number of inspections by Registrars showed a falling off. The explanations of certain Registrars were to the effect that heavy criminal business prevented the performance of the inspection duties imposed on them by the rules. The officers who failed in this respect were separately addressed by the Government. The inspections not only decreased in number, but they were not always of a critical character. In the report for 1892-93 the appointment of a special inspecting staff was recommended with special reference to Oudh. Financial and other considerations led to the postponement of the question. As the necessity for this measure as the only means of securing systematic and close inspection by experts was again urged, specific proposals for the consideration of the Government were called for.

The results of three years' working were thus compared with those for the preceding triennial period:—

			Numbe	r of do	cum	ents re	gistered.

The yearly average number of documents registered during the preceding triennial period was 206,520. In the first year of the triennial period under report the number was 208,482; in the second it rose to 225,685, and in the last year to 230,268. This rapid increase in 1894-95 and 1895-96 was attributed to the indifferent harvests and consequent agricultural depression which unfortunately characterized these two

years. The supposition derived support from the large increase in the number of

	Comp	alsory.	Optional.	1	
Year.	Sales.	Mortgages.	ortgages. Mortgages. 51,503 28,244	gages. Mortgages. Total.

sales and mortgages (under Rs. 100 in value) registered during the last two years, and

	Year.		Sales and mortgages under Rs 100-				
			Sales.	Mortgages	Total.		
300201							
1893-94	***	•••	16,058	23,244	39,303		
1894-95	•••		18,111	30,982	49,093		
1595-96		***	17,864	33,161	51,025		

documents relating to sales and mortgages of immoveable property registered during the last two years. The aggregate value of the transactions with which these documents were concerned was 578 lakhs in 1893-94 and 640 lakhs in 1895-96. The increase in the number of petty

included in the above figures, was probably another indication of the general pressure which hard times exercised on the agricultural population.

Of documents relating to immoveable property, of which the registration is compulsory, more than three-fourths fell

under the two classes of sales and mortgages; the remainder related to gifts, leases, and other similar contracts and conveyances. Under these last-named classes the variations in the figures during the triennial period were unimportant.

Registrations of documents relating to moveable property rose to 49,441 (annual average) in the trieunial period 1893-96 against 45,625 (annual average) in the preceding period. The increase was regarded as normal. Registration of such documents was with an unimportant exception optional, and the steady increase in the number so registered indicated the growing perception in the community of the utility of registration. These documents fell roughly into the two main classes of simple money bonds, and contracts for the sale of produce and the like. Of the 16,242 (annual average) simple money bonds, over one-half were for sums under Rs. 100 and one in every 11 for sums under Rs. 25. The fees paid in the latter case averaged only two annuals the document. Of the 28,772 (annual average) "other documents" having reference to movable property, nearly 17,000 were registered in the Bareilly registration district, and were in connection with the flourishing sugar industry of this part of the Provinces.

With the increase of registration operations receipts increased from Rs. 4,02,268 (annual average) in the preceding triennial period to Rs. 4,31,965 (annual average) in the triennial period 1893-96: and the surplus from Rs. 1,89,813 to Rs. 2,05,408 a year. The receipts from copying fees averaged Rs. 1,10,786 a year. With regard to these receipts, the total charges for copying establishments and contingencies debitable against them were considerably less in amount, and in place of the present sliding scale for copies a low uniform charge was recommended.

The average number of prosecutions under Act No. III of 1877 increased during the period under review from 4 to 10. The total number of such cases was 29, in addition to eight connected with registered documents, but tried under the Indian Penal Code. No less than 21 of these cases ended in acquittal. The result indicated either indiscreet action against innocent persons, or inability of Sub-Registrars to effectively press the case for the prosecution upon Magistrates. It was suggested that no prosecution should be initiated without the concurrence of the District Registrar, and that the District Government Pleader should be deputed by the District Magistrate in every such case to appear on behalf of the Crown. This suggestion was

Two suggestions of some importance were made with regard to the accommodation of the records of the Department. The first was that the buildings in which

many of the Sub-Registrars with their records are located were very insecure and inconvenient, and required to be replaced by proper accommodation. The second was that the older records, instead of being kept in the Civil Court record-room or in a special record-room under the charge of the headquarters Sub-Registrar, should be housed in a special building at Allahabad. With regard to the first suggestion, the submission of a list of offices where better accommodation was urgently required and a statement of the grant to be annually made for this object during the next five years were called for.

The inconvenient conflict of opinion between various High Courts as to the status of registering officers, attracted the attention of the Government, and was referred by it to the Government of India in connection with the revision of the Code of Criminal Procedure.

10.—MUNICIPAL.

During the year two Acts affecting municipal administration were passed by the Lègislative Council of the North-Western Provinces and Oudh: Act I of 1895 amending Acts XV of 1873 and XV of 1883 (the North-Western Provinces and Oudh Municipalities Acts), and Act II of 1895 amending Act I of 1891 (the North-Western Provinces and Oudh Water-Works Act). The object of these Acts was chiefly to define the jurisdiction and procedure of courts in regard to appeals from the assessment and levy of taxes under the Municipalities and Water-Works Acts.

The number of municipalities remained the same as in the previous year, viz. 103. The municipality of Naini Tal and five municipalities in the districts of Jhansi and Jalaun viz. Jhansi, Lalitpur, Kalpi, Kunch and Orai were administered by Committees constituted under Act XV of 1873; the total population of these municipalities according to the last census being 112,025. The remaining 97 municipalities with a total population of 3,137,377 were managed by Municipal Boards under Act XV of 1883.

The classification of the municipalities according to population was as below :-

							No.
Over 100,000	***	***		***	•••	•••	7
Between 50,000 an	000,000 a		•••		•••	•••	10
Ditto 10,000 ar	1d 50,000	***			***		59
Below 10,000	***			•••	•••	•••	27
					Total	***	103

The population ranged from 267,910 in Lucknow and 211,586 in Benares, to 5,306 in Shahdera and 5,441 in Pilkhua in the Meerut district.

Seats were contested in 52 municipalities. The greatest interest in the elections was shown in the Mussoorie, Hardwar Union, Baraut, Farukhabad cum Fatehgarh, Shahjahanpur, Ghazipur, Lucknow, and Fyzabad Municipalities. A want of interest in the result of elections was most noticeable in—

The District Magistrates in the following six important municipalities were exofficio Chairmen of the Boards:—

Agra.	1	Benares.
Allahabad.	l l	Lucknow.
Bareilly.		Moradabad.
•	17	

In all the other municipalities to which Act XV of 1883 applied, the Chairmen were elected by the Boards. In 83 municipalities the District Magistrate was elected, and in six the Tahsildár. The municipality of Fyzabad has for many years been administered by a Board presided over by a non-official Chairman, but the District Officers were the Chairmen in the case of all other municipalities at the headquarters of districts.

The following table shows the constitution of the Boards and Committees in each division at the close of the year:—

• Division.		Ex- officio.	Nominated.	Elected	Total.	Officials.	Non- officials.	Europeans.	Natives.

With few exceptions the meetings of the Boards and Committees were regularly held; the average number of meetings being 20.6 as compared with 22.5 in 1894-95. The average number of members on each Board was, as in the previous year, 15, but the average number present at each meeting decreased from 8.9 to 8.5, the attendance throughout the Province being 54.7 per cent, of the total number of members,

The best attended meetings were held at-

The octroi schedules of the undermentioned municipalities were revised :-

Tilhar. | Bela (Partábgarh). | Gorakhpur.

Taxes on tobacco-growers were imposed in the Budaun and Khairabad municipalities. A tax on vehicles and on animals used for riding or driving was introduced in Baraut, and a tax on weighmen in Bahraich.

The Dehra Municipality was authorized to levy a conservancy tax on houses outside the limits of bazars in the municipality. The Fatchpur, Mirzapur, Bareilly, and Bahraich Municipalities also made additions to their schedules. Octroi was abolished, with effect from 1st March 1896, in the Cawnpore Municipality, and was tentatively replaced by a tax on loaded vehicles and pack-animals entering the municipality, and by a tax on all consignments received within municipal limits by rail, the latter tax being collected by the Railway establishment.

In Cawnpore, Mirzapur, and Benares the duty on mahua was reduced, and in the last-named place a tax was imposed on persons entering or leaving the limits of the Municipality by rail.

With the object of enabling Municipal authorities to more effectively check the spread of epidemic diseases, the Government had in the previous year suggested rules requiring that prompt notice should be given of the occurrence of cases of cholera or small-pox, and the rules in question were adopted by 52 municipalities. During the year under report 30 other municipalities adopted similar rules. Rules for controlling the slaughter of cattle for human consumption with due regard for sanitary precautions were also adopted during the year under report by 25 municipalities.

Seventeen municipalities framed rules during the year under report for the voluntary registration of sales of cattle in municipal markets with a view to checking cattle-thefts and to protecting bond fide purchasers.

Rules under the Lodging House Act (I of 1892) were framed by the Naini Tal Municipality to which the Act had been extended in March 1894. Special reports on the working of the rules were received from Benares only, where it was stated that some difficulty had been experienced in the effective working of the Act.

The boundaries of the Hardwar Union, Bela (Partabgarh), Lalitpur, Sambhal, Benares, and Banda Municipalities were revised during the year under report.

The income and expenditure and the opening and closing balances of the municipalities in each Division are given below:—

Division.	Opening balance.	Income during the year.	Total funds available for disposal.	Total expenditure.	Closing balunce.
Meerut	Rs. 1,37,647 1,56,882 1,03,683 9,10,767 4,67,532 10,085 16,521 4,62,854 54,351	Rs. 14,95,107 6,41,311 5,16,190 8,46,603 8,31,814 85,506 1,17,989 5,52,469 2,05,881	Rs. 16,32,954 7,98,193 6,19,873 17,57,370 12,99,340 95,591 1,34,510 10,15 323 2,60,232	Rs. 11,98,261 7,21,988 5,29,979 9,67,425 7,48,154 83,450 1,25,924 8,27,759 1,97,560	Rs. 4,34,693 76,260 89,894 7,89,045 5,51,192 12,181 8,586 1,87,564 62,672

Meerut	•••	•••	44-	***	414		3,13,429
Mussoorie	•••	***	•••	•••	•••		42,558

The balance of nearly seven lakhs of rupees which was to the credit of the Cawnpore Municipality at the close of the year included a sum of over four and-a-half lakhs on account of the unexpended balance of the grant of six lakhs made some years ago by the Government for sewerage works. In Lucknow the balance with which the year opened was considerably reduced by an expenditure during the year of Rs. 2,80,147 on the water-supply scheme. The closing balance in Moerut included a sum of Rs. 2,76,036, being the unexpended balance of the loan made to the municipality. In Benares the closing balance has since been reduced by the repayment of two lakhs towards the principal of the water-works loans' account.

The income of the municipalities was derived from the following sources:-

Municipal rates and taxes Realizations under special Acts Revenue derived from municipal prop Grants and contributions (for general Miscellaneous Loans and other extraordinary items	and	and powers apart special purposes)	from	taxation,	0.0
		T	otal		62.92.870

The proceeds of octroi duties continued to be the chief item of municipal income. This form of taxation was in force during the year 1894-95 in 83 out of 103 municipalities, but was withdrawn from Shahdera and Mowana in the Meerut district during the year under report. In 27 towns no further form of taxation was resorted to. The 20 municipalities in which octroi was not resorted to were, with the exception of Dehra, Mussoorie, and Roorkee, unimportant places in which a very low rate of taxation has hitherto proved adequate for the requirements of municipal administration. In the following municipalities the incidence was remarkably low:—

Bhinga				•			As.	n.
	441	***	***	•••	***	•••	7	6
	•	•••	442	• / •		•••	- T	. 0

Shahdera	111		***	•••	•••	• • •	3	7
balrámpur		***	***	***	***		9	- î
nanampur	•••	***	• • •		***	***	9	9

The unpopularity of direct taxation, and the consequent difficulty of raising a substantial income from that source, explain the selection of octroi by the great majority of municipal boards. The taxes other than octroi in force were—

Octroi yielded a total gross income of Rs. 34,20,656 as compared with Rs. 35,04,556 in 1894-95. The total income realized from this source after deducting refunds was Rs. 27,36,152 or 82.7 per cent. of the total realizations from municipal rates and taxes as compared with Rs. 27,73,166 in the previous year. There was thus a falling off of Rs. 37,014; increases in the Meerut, Agra, Gorakhpur, Kumaun, and Lucknow Divisions being more than counter-balanced by decreases in the other four Divisions.

The net yield of octroi in the year 1893-94 amounted to Rs. 26,33,650 or Rs. 1,39,516 less than in the succeeding year, when unfavourable agricultural conditions led to an unusual expansion of the import trade in grain. These conditions unfortunately continued to prevail and explain why receipts from octroi remained so far above the normal figure.

The following statement compares the net receipts for the past two years under the different classes of articles on which octroi was levied:—

						1894-95.	1895-96.
						Rs.	Rs.

An account of the working of the water-works and the progress made in the drainage and water-works schemes in the chief towns is given below:—

Agra.—The average daily consumption of water rose from 946,722 gallons in 1894-95 to 1,305,158 gallons in 1895-96. The consumption per head rose in the city from 7 gallons to 8.72 gallons, and in cantonments from 3.75 gallons to 6.31 gallons. The cost per 1,000 gallons, excluding interest and sinking fund charges, fell from 2.16 annas to 1.88 annas. Including the above charges, the cost was 4.36 annas. The net expenditure on the maintenance of the works was Rs. 54,898 as against Rs. 46,746 in the previous year. The increase was due to the unusual lowness of the river, the repairs of engines, and the extra pumping required to meet the increased demand for water. The water-supply was laid on to 54 houses during the year, but 76 house connections were closed and the income from house connections fell from Rs. 6,839 to Rs. 5,873. There has been a continuous decline in this source of income, which in 1893-94 yielded Rs. 8,922. The revenue from the sale of water, however, rose by nearly Rs. 6,000. The water-works 'capital' expenditure amounted to Rs. 28,347, the chief items being the outlay on the Shahganj extension and the cost of adopting Chambal sand for the water-works filters, a lean of Rs. 24,000 being taken from the Government for the latter project. The sum of Rs. 45,419 was spent on drainage capital expenditure, the drainage of the Maithan mohalla being satisfactorily completed at a cost of Rs. 21,077; a further sum of Rs. 19,000 was expended in masonry cunettes.

Allahabad.—The total quantity of filtered water pumped into the mains rose from 403 to 502 million gallons, of which 43-million gallons were taken by cantonments. The average daily consumption was 1,370,990 gallons as compared with 1,104,146 in 1894-95. The maintenance charges of the works amounted to Rs. 57,314, and the payments of interest and sinking fund on account of the loan to Rs. 94,546. The cost of water, inclusive of all charges, was thus four annas 10 pies per thousand gallons, or nearly one anna less than in the previous year.

Benares.—The water-supply system worked satisfactorily until the breakdown of the pumping engines on the 23rd of February, when the supply was for a short time suspended. Immediate steps were taken to repair the damage and to arrange for the working of the engines until the broken machinery was replaced from England, and precautions have since been taken against the recurrence of a similar accident. Notwithstanding the accident, the total consumption of filtered water rose from $457\frac{1}{2}$ to $600\frac{1}{2}$ million gallons, the average daily consumption increasing from $6\frac{1}{4}$ to $7\frac{3}{4}$ gallons a head of the population. The number of house connections also increased from 2,570 to 3,064. The working charges amounted to Rs. 59,917, the incidence of working charges per thousand gallons being one anna six pies. The total charges for interest and repayment of the water-works loan will for the future be Rs. 84,844 a year, and the cost of the water, including charges of this amount for loans, was slightly below four annas per thousand gallons. Owing to the temporary reduction of the repayment charges, Benares now obtains its water-supply at a cheaper rate than any other municipality in the Provinces, and when a continuous supply is secured by the

construction of a raised reservoir, the consumption may be expected to develope still further. The receipts from water-rate were Rs. 78,693, and from sale of water, Rs. 4,506.

Cawnpore.—A, Water-works.—No report was submitted by the Resident Engineer and no account given of the progress made in developing the demand for filtered water and in preventing resort to polluted sources of supply. The consumption of filtered water during the year was at the rate of eight gallons per head per day, and the actual cost to the Board of the supply was within a fraction of five annas per 1,000 gallons.

B, Sewerage works.—The correction of defects in the conservancy arrangements was taken energetically in hand, and though the sanitary state of the city still leaves room for much improvement, as much progress was made as was possible at the time and under the conditions of the year. The drainage scheme was still under the consideration of the Board.

Dehra.—The water-works were completed, and the water let into the pipes on the 12th March 1896. The cost of the project was Rs. 97,241. As the scheme was only completed a few days before the close of the year, a detailed account of the working of the scheme cannot be given.

Lucknow.—The total quantity of filtered water pumped into the mains was 270 million gallons, and the average daily consumption rose from 675,000 to 731,000 gallons, of which 604,000 gallons were taken by the city and civil lines. The charges for the water-works were—

Rs.

Interest and sinking fund (deducting Rs. 46,165 paid on account of 1894-95), 75,946

Maintenance charges 62,233

Total ... 1,38,179

From this may be deducted Rs. 3,000 paid on account of a supply of 41 million gallons of unfiltered water to the gardens at Husainabad, leaving Rs. 1,35,179 as the cost of supplying 270 million gallons of filtered water or a little over eight annas per 1,000 gallons, including all charges on the loan account. The very high cost was due to the fact that the daily supply was much below the quantity for which the engines were designed; as the further extension of the pipe lines are completed, the raised reservoir brought into operation, and arrangements made for house connections, there will be a marked increase in the supply, and a considerable fall in the cost per 1,000 gallons. At present the consumption of water in the municipality is not quite $2\frac{1}{3}$ gallons per head per day.

Mussoorie and Naini Tal.—In Mussoorie the water-works were improved by duplicating the machinery. The engines will now be able to work for the whole season. In Naini Tal it was found necessary during the year to renew certain portions of the engines and to purchase accessories. These included two new pumps to replace the original ones which had broken down. The year was an extraordinarily dry one from the middle of September 1895 to the beginning of June 1896, and all the main springs throughout the settlement ran dry early in the winter, with the consequence that excessive work was thrown on the pumping engines.

Meerut.—The water-works were satisfactorily completed and started working after the close of the year.

The 103 municipalities in the Provinces with an aggregate income of 76 lakhs including the opening balance, expended over 21 lakhs on water-supply, drainage, conservancy, markets, and slaughter-houses.

The total gross liabilities of the municipalities were Rs. 84,17,988, and the total claims Rs. 70,231; the net amount of debt was thus Rs. 83,47,757 as against Rs. 83,23,876 in the preceding year.

The grants made to municipalities from Provincial and Local Funds aggregated Rs. 83,059 as against Rs. 91,736 in 1894-95. The grants were almost the same as last year except in the case of Naini Tal, which received Rs. 11,000 in final payment of the grant made by Government of Rs. 15,000 for miscellaneous public improvements.

The cost of the conservancy establishments amounted to Rs. 7,88,179 as compared with Rs. 7,80,021 in the previous year.

The expenditure incurred by municipalities on account of education was Rs. 1,30,875 as against Rs. 1,29,450 in 1894-95. There were 318 educational institutions with 30,076 pupils supported or aided by municipalities as compared with 316 institutions and 33,642 pupils in the year preceding. The expenditure above stated does not include the contributions made by municipal bodies to district boards on account of the maintenance of intra-municipal schools and dispensaries, which are managed by district boards and not by the municipalities. These contributions amounted in all to Rs. 1,05,262, a portion of which sum should be added, to obtain the true expenditure on education.

The number of successful vaccinations increased from 1,09,373, to 1,15,657 and the total number of persons vaccinated from 124,994 to 135,465. The Vaccination Act was in force in all the municipalities of these Provinces.

The statistics of births and deaths during the past two years are compared in the following statement:—

			Births.	Ratio of births per mille of population.	Deaths.	Ratio of deaths per mille of population.
1895-96	984	:::	125,321	88·56	121,051	37·25
1894-95	194		121,694	37 24	146,882	44 94

The death-rate decreased from 44.94 to 37.25 while the birth-rate slightly increased. The year was thus on the whole a healthy one.

The total of the investments held by the Boards was Rs. 1,75,200 as compared. with Rs. 1,88,900 in 1894-95. Of the former sum Rs. 57,030 represent the amount of the invested sale proceeds of nazúl lands.

Attention continued to be given to the regulation of intra-municipal burial-grounds, and many of the more insanitary of these were closed.

11.—Towns under Act XX of 1856.

The town of Karara was withdrawn from the operation of the Act which was tous in force during the year in 335 towns as compared with 336 in the previous year.

The total population of the towns under the Act amounted to 1,733,901, and the number of houses assessed to 230,638 as compared with 226,795 houses in 1894-95. The gross yield of the taxation imposed under the Act was Rs. 3,31,768, giving an incidence of three annas per head of population and Re. 1-7-0 per assessed house. The total income from all sources, including the balance of the previous year, was Rs. 4,54,493, and the total expenditure Rs. 3,71,126 leaving a balance of Rs. 71,609 at credit of the towns on the 31st March 1896.

12.—District Boards, 1895-96.

There was no change in the number of District Boards and Committees constituted under Act XIV of 1883, and there was no logislation carried out during the year in regard to these bodies.

The District Boards, numbering 44, were composed of 1,264 elected and 279 nominated members, of whom 62 were Europeans. The average number of members on each board was 35; the Magistrate of the district continued in every case to hold office as Chairman.

The District Committees, numbering 4, were composed of 84 members, of whom 30 were ex-officio, and the remainder members appointed by the Government on the nomination of the District Magistrate. Seventeen of the members of District Committees were Europeans.

The District Boards held, on an average, 12 meetings during the year, at which the average attendance of members was about 12. The average number of meetings held by District Committees was 10, and average attendance thereat 11.

The following is an abstract of the income and expenditure of these bodies:-

· Receipts.	Expenditure.
Rs. 1. Local rates allotment 18,90,528 2. Interest— Rs. (a) On Educational securities 3,686 (b) On Dispensary ditto 17,652 3. Net receipts under the Cattle Trespass Act 1,73,475 4. Education 2,20,291 5. Medical 1,45,111 6. Scientific and other Minor Departments 3,706 7. Miscellaneous 32,892 8. Public Works (including receipts from Arboriculture, Rs. 59,850) 62,536	1. General Establishment of Local Rs. Funds
9. Contributions— Rs. (a) From Provincial to Local 11,29,911 } 12,34,543 (b) From other Boards 1,04,632 j	Total 36,70,582 Closing balance
GRAND TOTAL 37,84,420	GRAND TOTAL 37,84,420

The excess of expenditure over receipts was made good by an allotment from Provincial Revenues.

The following is a brief outline of the work done in the several branches of the administration with which District Boards and Committees are connected:—

Education.—The year was one of agricultural depression, and in a number of districts there was a decline in the number of children attending schools. Improvement was shown in the districts of Dehra Dún, Aligarh, Bijnor, Bareilly, Sháhjahán-pur, Hamírpur, Bánda, Kheri, Fyzabad, Bahraich, and Partábgarh; on the other hand the attendance fell, or the examination results were unsatisfactory, in Saháranpur, Muzaffarnagar, Moradabad, Pilibhít, Fatehpur, Allahabad, Jaunpur, Garhwál, Hardoi, and Gonda. Non-official members continued to interest themselves to some extent in this branch of the administration, and schools were inspected by them in the districts of Meerut, Etáwah, and Jaunpur, as many as 19 members assisting in this work in the last-named district. In Garhwál, where, education in still in a backward state, the members of the District Committee took an active interest in the matter.

The attention of District Boards was called to the necessity for a considerable extension of primary vernacular education. The results will, it is hoped, be apparent in an increase in the number of village schools and of scholars attending them during the current year.

Medical.—The sadar and branch dispensaries continued to do good work during the year; but some of them still fail to secure the small amount of local income necessary to entitle them to the Government grant-in-aid. The dispensaries which notably failed in this respect were those at Aliganj in the Etah district; Chandpur in the Bijnor district; Jalálabad in Sháhjahánpur, Jais and Salone in Rae Bareli, and the Käisarganj and Sajauli dispensaries in the Bahraich district. The attention of the District Boards was again called to the necessity for obtaining local support to the.

institutions. In Etáwah the private contributions to dispensaries continued to increase; and in Etah the Municipal Board increased its contribution to the local dispensary. Among the larger private benefactions to dispensaries was a donation of Rs. 1,000 made by Mahant Prayag Das towards the cost of providing quarters for the Assistant Surgeon at Dehra: and in the Bulandshahr district members of the District Board contributed medicines and cash donations. New dispensaries were established during the year in the Basti, Fatchpur, and Bareilly districts, and two more were under construction in Bahraich. In Bare illy the new ward of the Sadar Dispensary erected by public subscription in memory of the late Mr. C. J. Connell, I.C.S., for some years Collector of the district, was formally opened by the Lieutenant-Governor on the 23rd October 1895. A new set of rooms was added to the Baheri branch dispensary in the same district. The dispensaries for women, which have been established in a number of districts, are also making satisfactory progress.

Vaccination.—There was a steady, and in some districts marked, improvement in vaccination work. Members of District Boards interested themselves in the work in many districts.

Public Works.—Attention was paid in all districts to this branch of administration. In Meerut the non-official members of the District Board undertook the repair of all school buildings as well as the supervision of the work done by contractors in repairing roads under the control of the District Boards. Similar interest was shown by the members of the District Boards in Bulandshahr and Fyzabad; in Sultanpur the experiment of employing non-official members in the supervision of such work proved unsuccessful, owing to the apathy of the members concerned. In Partabgarh, Captain F. C. Chapman, a member of the District Board and a landed proprietor of the district, undertook the supervision of road repairs, and the arrangement resulted in a considerable economy.

The most important original works carried out during the year were-

- (1) the completion of the restoration of the Káli Nadi bridge on the Aligarh-Ramghat road;
- (2) the construction of the Chatri bridge over the Káli Nadi on the Sasni-Saukra road in the Aligarh district;
- (3) the metalling of the Agra-Fatehabad road;
- (4) the metalling of a portion of the Aspur and Sakit road in the Etah district;
- (5) the metalling and bridging of 18 miles of the Moradabad-Sambhal road;
- (6) the construction of a metalled road connecting the town of Kanth with the railway station—a work not quite completed;
- (7) the raising and metalling of the road from Akbarpur to Rais in the Cawnpore district;
- (8) the raising and bridging of the road from Jhinjett to Rasulabad in the Cawnpore district;
- (9) the construction of a first class feeder road from Mahoba to Lauri in the Hamírpur district;
- (10) the metalling and bridging of a portion of the Maudha-Muskara road in the Hamírpur district;
- (11) the completion of an inspection bungalow at Kulpahár in the Hamírpur district;
- (12) the metalling of the road from Deoria to Barhaj in the Gorakhpur district;
- (13) the raising and bridging of the Khalílabad-Mehndawal road in the Basti district; and
- (14) the construction of a new headquarters dispensary building at Sultanpur.

Arboriculture.—The non-official members of District Boards took comparatively little interest in arboriculture, though it is a branch of their duties in which it would be possible for them to render valuable assistance. A system which promises to prove a success was tried in a few districts, under which the local landowners plant trees on the roadsides and look after them, the right to the produce of the trees and the fallen timber being secured to them by careful registration.

Testing of vital statistics.—This continued to receive attention, and in many districts the non-official members of the District Boards gave more or less personal assistance. Generally the result of the testings has been to show increased accuracy in the registration of vital statistics.

Civil Veterinary Department.—The operations of this Department were generally contined to the districts most suitable for horse-breeding, and the results appear to have been satisfactory. At present, however, funds are not available for any considerable extension of the operations of this Department.

Sanitation.—Increased attention was paid to village sanitation in a number of districts.

13.—MILITARY.

Volunteer movement.

There was no change in the number of Volunteer corps in the Provinces during the year, but there was steady progress and continued improvement both in the numbers and efficiency of members of the force. The total strength of the active force increased from 3,864 to 3,942, but the number in the mounted branch fell from 445 to 358 members only.

The statistics of musketry qualification show that the percentage of extra efficients in the cavalry fell from 82.09 to 78.10, while that in the infantry rose from 72.69 to 76.75. The number of marksmen in the mounted branch decreased from 35 to 24, and in the infantry rose from 128 to 146.

The financial condition of every corps is satisfactory, and the year closed with a total credit balance of Rs. 20,133.

Statement B shows the condition of the reserve force. There was a decrease in the total strength; viz. from 735 to 662; and the percentage of efficients has fallen from 90.75 to 81.47.

The following tables (A and B) exhibit in detail the statistics of the year:-

Bratement A .- Voudnings.

CHAPTER IV.

PRODUCTION AND DISTRIBUTION.

MISCELLANEOUS.

(1) Village records.

Establishment.—The establishment under the control of the Department of Land Records and Agriculture during the year under report and the year preceding it is shown in the following table:—

Mr. Alexander's proposals for increasing the number of assistant registrar kanúngos and for appointing copyists and assistant record-keepers of patwáris' papers were examined in correspondence with District Officers, with the result that one more assistant registrar kanungo was sanctioned, while the post of assistant record-keeper was temporarily reduced in the districts of Saháranpur, Meerut, Moradabad, Sháhjahanpur, Agra, and Cawnpore until such time as the patwaris' papers come in from talistis to headquarters. As regards copyists, it has been ruled that such appointments from the Patwari Fund should not be sanctioned in any district in which the patwaris' papers are under the control of the revenue record-keeper. In the Patwári School establishment one chainman was reduced, while four assistant teachers were added where their services were required. The number of patwaris decreased from 29,398 to 29,355 owing to the revision of circles in certain districts. To make the kanungo's post more attractive than at present, it has been ruled that not less than five appointments of náib talisíldárs shall be filled up annually by promotion of subordinate revenue officials, and five kanungos were accordingly selected for promotion. Twenty kanúngos obtained temporary appointments as náib tahsíldárs and one was permanently appointed to that post. Two kanungos also obtained officiating appointments as tahsíldárs and two were provided with miscellaneous appointments in other offices.

Revision of patwaris' circles and saluries.—During the year under report the pay of the patwari staff in the Moradabad district was increased. The scale of pay of the patwaris of the Agra district as proposed in the revised scheme originally prepared having been considered to be somewhat too low, the period for the enforcement of the new scheme has been extended from 1st October 1895 to 1st October 1896, in order to enable the District Officer to consider whether the reduction in the number of circles has in any instances been carried too far, and whether it would not be advisable to raise the rates of pay to some extent. Proposals for certain parganas of the Garhwal district are under consideration, while the examination of those for Shahjahan-pur and Bahraich has been deferred till the survey or settlement operations are over. Proposals for Partabgarh and Unao are still under discussion. In other Oudh districts the revision work will be taken up by the District Officers.

Patwari Schools.—At the beginning of the year under report the number of patwaris and assistants in the Provinces (exclusive of Almora and Garawal) was 29,355, of whom 23,109 had passed through the school course, 4,140 were exempted from examination, and 2,106 had still to pass. Six hundred and seventy-six patwaris and assistants attended the patwari schools, of whom 163 passed. In addition to patwaris and assistants, 1,562 candidates were educated in the patwari schools as compared with 2,801 in the preceding year: of these 577 passed. The total receipts from fees and fines amounted to Rs. 10,608 and the total expenditure on the schools to Rs. 14,045, leaving a deficit of Rs. 3,437.

In the matter of surveying, the instruction given to patwaris in districts now being surveyed or about to be surveyed has necessarily been thorough. The facility with which such instruction can in future be imparted, will no doubt be increased by the publication of a very practical code of instructions for cadastral surveying, drawn up by Mr. G. B. Scott, Superintendent of the Land Records Surveys, which has been printed in English, and will soon appear in Urdu and Hindi. Mr. Twigg's Manual of Mensuration and Mapping has also been printed in English and sent to each district.

Kanúngo Examination.—The annual divisional examination of kanúngos was held as usual during the rainy season. Out of 152 men who appeared for examination, 114 were candidates and 18 selected patwáris. Seventy-seven persons passed in all subjects and 73 in part, and two failed entirely. The eandidates were not examined in survey, arrangements having been made for their joining a survey party and obtaining a certificate of proficiency in surveying from the officer in charge. The special survey school opened at Cawnpore in 1891 was closed during the year under report after the first session was over. The necessity for the special school has disappeared, as there are now survey parties at work in several districts, by attendance in which a much better practical education in survey can be obtained than in the school. Seventy-one candidates were present during the first session in which the school was open. Of these 28 passed in all subjects and the remaining 43 in part.

Residence of patwaris.—The number of patwaris residing within their circles is 20,345, or 70 per cent.; 4,102, or 14 per cent., are exempt by order from residence; and 4,627, or 16 per cent., are non-resident, though not exempted. The subject of the residence of patwaris has received considerable attention during the year in the majority of districts.

Filing of patwaris' papers.—The punctuality observed in filing these papers was last year noted with approval, and during the year now reported on there was, excluding settlement districts in general, a further improvement. The papers were filed with creditable punctuality in the districts of Muzaffarnagar, Farukhabad, Jalaun, and Benares. Of the total number of comparative area statements 84·02 per cent. were filed in time against 83·30 per cent. in the preceding year. Of the kharif crop statements 83·39 per cent., of rabi crop statements 88·80 per cent., and of jamabandis 79·29 per cent. were filed in good time against 83·61, 88·52, and 85·34 per cent. filed in the previous year.

Testing of patwaris' pa pers.—Of a total number of 72,253,926 fields 5,255,525, or 7.27 per cent., were tested by kanangos against 8.40 per cent. in 1893-94. The decrease is not very large considering that about half the number of kanangos in the majority of districts were deputed to survey parties. The number of fields shown as tested by kanangos and retested by superior officers was 234,783, or 4.47 per cent., as against 7.15 per cent. in the previous year. The decrease is due to the exclusion from the return of the testing done by sadr kanangos and naib tahsildars. Besides the 234,783 fields tested by kanangos and retested by superior officers, 581,814 fields not previously tested by kanangos were tested by superior officers as compared with 612,661 fields in the preceding year. The decrease shown is due to the cause already mentioned, viz. testing by superior officers has considerably increased in the majority of districts.

Instructions issued as to the systematic testing of patwaris' papers appear to have been generally attended to. These instructions have been in force now for three years, and in several districts practically all circles have been tested once by a superior officer.

Inspection of districts.—The kaningo Inspectors attached to the Department of Land Records inspected the work of patwaris and kanangos in the districts of Saharanpur, Aligarh, Muttra, Agra, Mainpuri, Etawah, Etah, Cawnpore, Fatehpur, Banda, Hamirpur. Allahabad, Jhansi, Jalaun, Jaunpur, Ghazipur, Gorakhpur, Azamgarh, Unao, Rae Bareli, Bahraich, Sultanpur, and Partabgarh with a view to correcting errors of procedure. The inspection reports were forwarded to the District Officers for information and necessary action. The Director himself visited and inspected Land Record work in Meerut, Bulandshahr, Muzaffarnagar, Etah, and Azamgarlf. He also examined the districts of Shahjahanpur and Kheri as a preliminary to settlement, and submitted his reports on the condition of the maps and records and the probable financial result of a new settlement in those districts.

Preparation of districts for settlement .- A complete resurvey and careful revision of the annual land records of the districts of Meerut and Bahraich and the Lalitpur sub-division of Jhánsi was undertaken during the past year under the charge of professional surveyors trained in the Survey Department of the Government of India. Mr. T. F. Freeman was placed in charge of the work at Meerut, Mr. W. Skilling at Bahraich, and Mr. N. Bedford at Lalitpur. On the 24th of December 1894, Mr. G. B. Scott assumed charge of the office of Superintendent of Land Record Surveys in these Provinces. He visited all the Survey of India traverse parties to make the arrangements necessary to secure a full supply of work for his own cadastral parties. He also inspected in detail at least twice the work of each cadastral survey party; and the districts of Kheri, Shahjahanpur, Bareilly, and Azamgarh were also inspected by him in order to examine the state of the settlement maps. He was also in charge of a contour survey of Naini Tal. An area of 2,439 square miles, including 1,983 villages and no less than 1,756,668 fields, were cadastrally surveyed by the three survey parties in 1894-95. The total number of patwaris and kanungos and heirs and relatives of patwaris and kanangos trained and employed in surveying was 1,009, of whom 235 were kanungos of districts other than those under survey deputed to the survey parties for purposes of training Many of these kanungos were examined by Mr. Scott personally. Of the whole number of patwaris only 76 were rejected as too old or otherwise incompetent. The patwaris who have received training in the survey parties are now quite capable of keeping their plans up to date in future on a proper system. The cost of survey operations during the year was Rs. 29-1-8 a square mile only, a figure somewhat lower than it will be possible to maintain in future years, as for the past year records were not completed along with the survey.

Tahsil registers.—In August 1894 the staff maintained for compiling the tahsil hand-books and the pargana-books and mauza registers in the revised form sanctioned by Government was moved to Bulandshahr. During the year under report the pargana hand-books for Bulandshahr and Saharanpur districts and the mauza registers and pargana-books for Bulandshahr, Saharanpur, and Jhansi were completed. A portion of the work in these districts was done on the piece-work system, and this system having proved to result in economy has been introduced on a larger scale in Gorakhpur and Basti, to which districts the staff was moved towards the close of the year. In Bijnor, Budaun, and the Oudh districts now under settlement, the Settlement Officers have undertaken the preparation of the tahsil hand-books, parganabooks and village registers, the forms required having been supplied by the Department of Land Records. In the districts of Partabgarh, Rae Barchi, Lucknow, and Unao, the work will be finished before the Settlement Offices are closed. The utilization of the old form of pargana-book in districts not lately settled has during the year received considerable attention both from District Officers and from the Department of

Land Records; but it nevertheless seems probable that it will be necessary to issue more detailed and more explicit orders regarding the way in which these books are to be used.

Maintenance of traverse survey and boundary marks.—Under G. G. O. No. $\frac{510-19}{71}$, dated 10th March 1892, lists of survey and boundary marks have been prepared in almost all districts. The marks have also been inspected and steps are in progress for their repairs or re-erection wherever necessary.

Amendments to rules.—Certain changes in rules and procedure introduced during the year may be briefly referred to. In connection with correspondence which took place with the Government of India, it has been determined to exclude areas in which crops have entirely failed from the area shown as cultivated in the patwaris' papers. A set of rules has also been drawn up for the distribution of patwaris' salaries and keeping their pay accounts. In connection with provincial horse-breeding operations, special forms for the registration of mares and their produce by patwaris were drawn up on the lines of those introduced in the Panjab and rules were framed for their use. Assistant record-keepers having been appointed for the custody of patwaris' papers, arrangements are now being made in all districts in which it is possible to keep patwaris' papers separate from other revenue records. The introduction of the new pargana-book and mauza registers has brought about certain alterations in the patwari and kanango forms, and the changes that will have eventually to be made in the rules have been embodied in a note which has been sanctioned by Government.

Supply of patwari and kanungo forms.—The grant under this head was Rs. 80,000, out of which Rs. 61,725 were spent in the year under report against Rs. 71,196 in 1893-94.

(2) Fairs.

Agricultural shows were held at Kakora (Budaun), Ethwah, Rampur, Khairabad, Aligarh, Bulandshahr, Muzaffarnagar, Meerut, Muttra, Gola Gokar Nath, and Bahraich. The Director was himself present at the Nauchaudi fair in Meerut. At the Etawah and Muttra fairs the department was represented by the Assistant Director, who gave lectures on agriculture and judged prizes. The remaining shows were attended by the farm apprentices. The largest number of implements were sold at Muttra, where the Collector heartily co-operated with the Assistant Director in bringing them to the notice of the zamindárs. Great improvement is reported to have been effected during the year in the management of the agricultural section of the fair at Muzaffarnagar. The largest number of cattle was exhibited at Aligarh, and of samples of agricultural produce and implements at Muzaffarnagar and Bulandshahr, in which latter district certain cultivators of fair means have adopted improved implements for ordinary use. The cattle exhibited at Mecrut, though few in number, are reported to have been remarkably fine, and a four-roller sugar mill shown by Mr. Jones of Nahan is said to have been "apparently a great improvement on the existing mills." In regard to the implements exhibited the usefulness of the department has been to a considerable extent curtailed by want of funds to secure for trial or exhibition implements of the best description. Cheap implements, such as tenants could purchase, are shown; but wealthy zamindars frequently consult the department in regard to the best form of implements that can be recommended, particularly in regard to pumps. The fair at Gola, started by Colonel Harrison three years ago, though a very small one, is of great importance in being held at a place where specimens of the famous breeds of cattle of the Kheri district are shown and sold; and is deserving of special encouragement as likely to be conducive to improvement in those breeds.

(3) Departmental Agricultural Journal.

The journal has been issued during the year under report to subscribers from the Panjáb, Rájputána, and the Central Provinces, besides those from the North-Western Provinces and Oudh. The total number of copies now issued is 392 as compared with 300 issued last year; and the increase has more than made up the decrease noticed in the preceding year. The number of subscribers to the Hindi edition of the journal, which has been brought out by the manager of the Lucknow Printing Press under his own supervision and management, was 34 on the 30th September 1895. The Hindi issue has not, therefore, so far been financially a success, but the venture is one to which the support of the department may fairly be given; and it is hoped that a larger circulation may be secured for it. It may prove of special value in connection with possible extension of agricultural education to village schools which is now under consideration.

(4) Forecasts of crops.

Two forecasts on the indigo crop and three on each of the cotton, gingelly, wheat, linseed, and rapeseed crops were issued as usual during the year under report. The area statistics under the various crops are obtained from the crop returns filed by the patwaris, while the condition of crops is judged from the reports received from selected zamindars on a system introduced several years ago. Since August last a monthly report on the agricultural prospects of the Province based on the reports received from districts is issued by the department and published in the Guzette under the orders of Government. A collection of the circulars and instructions issued regarding crop forecasts was made and printed for future reference.

(5) Exhibitions. Nil,

(6) Cawnpore Agricultural Station.

The year under report was most unfavourable for experimental work. The rains were excessive, and continued with few breaks to an exceptionally late period. The continuously wet weather damaged the kharif crops in particular and considerably delayed the preparation of the ground for the spring sowings. The outturn in many cases was therefore poor. Among the various nitrogenous and non-nitrogenous manures applied to maize, sheepdung mixed with bonedust gave very fair results for such an unfavourable season as that of 1894. In an experiment to determine the effect of bonedust, gypsum, and farmyard manure on indigo, the highest outturn of green stalks was obtained from the plot treated with bonedust, which is, however, so far a very expensive manure. In an experiment started in 1894 at the request of the Agricultural Chemist to the Government of India to determine the comparative effect of certain mixed mineral and organic manures on sugarcane of the matna or the indigenous variety of Campore the highest outturn of gur (raw sugar) was yielded by the produce of the plot treated with bonedust. Four other varietics of sugarcane, namely Dhaul (Behca), Dikchan (Sháhjahánpur), Baraukha (Lucknow and Bara Banki;, and Saruti (Fyzabad) were also tried, and the gur obtained from them contained on the whole a higher percentage of sugar and a lower percentage of glucose than the matna gur. Of the various manures applied to wheat, the effects of sheepdung applied alone or with other artificial manures were particularly marked. Saltpetre also produced good results. The yield from poudrette was higher than from cowdung. Cowdung mixed with bonedust produced more grain than cow dung alone. The results corroborate the fact that nitrogen is the best fertilizing agent for wheat. The Khandesh cotton sown before and after rain was poor, but the results were distinctly in favour of early sowing. The experiment to ascertain the comparative vitality and productive power of fresh and old indigo seed was repeated, and the result showed that old seed, though it produced poorer crops, was not absolutely unfit for sowing, and that the highest outturn of green stalks and seed was obtained from the plots sown with seeds not more than one year and four months old. The yield of wheat from plots ploughed deep with the improved ploughs was higher than from the plot which had received shallow ploughings with the indigenous ploughs, and the cost of labour and time required for ploughing was less in the former case. The several varieties of Canadian oats gave as usual a heavy yield of straw, but a poor outturn of grain, showing that they could be used to the best advantage for raising luxuriant crops of a nutritious green fodder. Egyptian or barsim clover (Trifolium alexandrianum) completely failed to germinate, although seed obtained direct from Egypt and that produced at the farm had both been sown.

(7) Demonstration Farm, Meerut.

As reported last year, this farm was made over to the Collector of Meerut at his request on the 1st of July 1894. The services of an apprentice of the Government Farm were also lent to him for one year. Shaikh Wahid-ud-din, son of Shaikh Abdul Karim Khan, C.I.E., Khan Bahadur, of Meerut, came forward with a liberal contribution of Rs. 1,500, and in view of his liberality it was proposed to name the farm the "Shaikh Wahid-ud-din Demonstration Farm." Experiments were tried in the kharif and rabi seasons of 1894-95, chiefly on the lines followed in the Cawnpore Government Farm, and the results were on the whole similar to those at the latter farm. The good manurial effects of sewage and silt from a sewage ditch adjoining the farm were brought to the notice of the neighbouring cultivators, and its value is said to have been recognised by them. It was shown that the sewage water could be used with excellent effect for the irrigation of the majority of growing crops. The question of taking practical measures to extend the use of sewage for manurial purposes among the native cultivators is receiving close attention on the part of the Collector.

(8) Enclosure of waste lands.

There are at present three usar reserves under the control of this Department, one situated in the district of Cawnpore and two in Aligarh. An account of the operations carried on at each reserve during the year under report is given below.

Juhi usar (near Cawnpore).—This plain has been maintained mainly as a fuel reserve. A few patches of land have, however, been broken for cultivation of cereals. The soil at the usar has undergone much improvement, and there are hardly any bare patches of usar on the plain now. Fodder operations have not on the whole been successful during the past year. Considerable attention was paid in the year under report to the planting and sowing of fuel-producing trees, chiefly babul and dhak. The tanning trees planted in 1893 have made remarkably good progress. The date-palms are progressing slowly. Sixty-two farash cuttings were planted, only two of which gave off shoots, only to die immediately after. Agave Americana has been extensively planted as a hedge, and the plants are establishing themselves. Sarpat grass (Saccharum ciliare) has also been successfully planted on a large scale. Jait seed (Seshaina Egyptiaca) sown in thalas has germinated, though not freely. The old trees are in good condition, making satisfactory progress.

Cherat úsar (near Aligarh).—As reported last year, the farm and dairy at Cherat have, with the sanction of Government, been leased out for five years to Mr. E. Keventer, the dairy expert, with effect from 1st November 1894. The úsar was inspected by the Director and by the Assistant Director during the year under report. Eighteen acres have been newly broken up by Mr. Keventer, and the whole cultivated area, including that formerly held by tenants, is now entirely cultivated under Mr. Keventer's direct management, and trees are planted experimentally, the Department paying the cost of experiments started at its request. Dung manure was heavily applied to the fields prepared for rabi, and arrangements were in progress to drain

liquid manure into the cultivated area. The growth of grass on the usar was rather poor owing to insufficient rain. Inga dulcis and Jait seeds (Seshaina Ægyptiaca) recently sown in a ditch filled with good earth manure have germinated well. The farash cuttings (Tamarix articulata), which were reported last year to be making satisfactory progress, dried up in the hot weather of the year under report. The date-palms are looking remarkably well.

Gursakran reserve (near Aligarh).—Nearly 12½ acres of land were broken up during the year under report for cultivation and growing of fuel-producing trees. The rice crop harvested in the beginning of the year gave a fair outturn, but the yield of rabi crops was generally inferior owing to heavy winter rains. The yield of potatoes from a small plot of usar land which was thoroughly ploughed and had received heavy manuring during the past two years was as high as 65 maunds per acre. On the uncultivated area Sporobolus pallidus is the commonest grass; but the superior grasses are getting the better of it, especially in and around the depressions. Special attention was paid during the year to sowing and planting trees for fuel with results similar on the whole to those already recorded for juhi. On a suggestion from the Director, Botanical Department, certain crops belonging to the order papilionacea were sown in the kharif on usar land thoroughly ploughed and cleaned, but completely failed to grow. Experiments recommended by the Agricultural Chemist to the Government of India to determine (a) the weight of dung obtained from a pair of bullocks in the course of a year, (b) the effect of that quantity of manure on a cereal crop in a given area, and (c) the weight of firewood used per family of cultivators have been started and are in progress; but it is too early yet to discuss their results.

The Amramau usar reserve, which was sold after reclamation, was visited by the Assistant Director. The condition of the soil has further improved owing to heavy application of manure (city sweepings) and persistent ploughings.

(9) Selection and distribution of wheat seed.

The total quantity of wheat distributed during the year from the experimental station, Cawnpore, was 12,054lbs. as compared with 11,645lbs. distributed in the preceding year. The figure includes an item of 50 maunds indented for by Thákur Mahabir Parshad and Niranjan Singh, Ráe Bahádur, of Allahabad for local distribution.

(10) Ploughing fair.

Ploughing competitions were held at all the fairs, and in the majority of them, the highest prizes were taken by either the Watts or the "Improved Baldeo" plough introduced by this Department.

(11) Boring apparatus.

Experimental borings were taken in the districts of Budaun, Bareilly, Aligarh, Etah, Muttra, and Cawnpore. In Cawnpore, the experiments were made at the request of the Public Works Department in connection with the extension of the Ganges Canal now in progress. The total number of borings during the year under report was 86 as compared with 36 in 1893-94, showing a considerable increase over the preceding year. On account of the heavy demand for boring an extra well-sinker was entertained by the Department lately. There are now three well-sinkers who have full work at present. The salary and travelling allowance of the well-sinkers for the period of their work and the freight of boring implements are paid by the individuals, who engage their services, and the Department pays them for the short intervals (if any) during which they have either to work for the benefit of Government or are not employed by private applicants. The Department also keeps spare sets of boring tools, for lending out to private persons on certain conditions.

(12) The Lucknow Museum.

The total number of additions made during the year under report to the various sections of the museum amounted to 3,573 specimens, of which 3,007 were presented by various persons and associations. The collection of Indian war medals is now complete with the exception of the Seringapatam medals and the new medal of 1895 given for the Chitral expedition. The interest taken by the public and specially by the native public in the museum, as evidenced by the number of visitors, continues to increase. There were 1,90,072 visitors during the year as compared with 1,74,240 in the previous year.

(13) Saháranpur and Mussoorie Botanical Gardens.

The season was not a propitious one. Nearly the whole of the 58 inches of rain measured at Saháranpur fell on 39 days only during the three months of the rainy season, and this downpour was followed by a drought which lasted for eight months. No lasting damage was done; but the appearance of the less acclimatized trees suffered. The important mange crop suffered from the dryness of the atmosphere, and the crop of limes and lemons was also light. In other respects the year's working was satisfactory. Some improvements were effected in the appearance of the Saháranpur garden, and experiments of some value in the cultivation of fodder and fibre plants and in the acclimatization of a considerable number of imported plants were carried out. More than 95,000 plants (52,000 being strawberries) and 34,735 packets of seeds were distributed, and 879 pounds of drugs supplied to the Government Medical Depôt from the garden.

The total expenditure on both gardens amounted to Rs. 25,343-3-11, and the total direct and indirect income to Rs. 26,458-7-11.

(14) Horticultural Gardens, Lucknow.

The past year was characterized by the brief duration of the rains and the lengthened period of extreme drought which followed their cessation. The year was therefore unfavourable for horticulture and particularly for ornamental gardening and fruit growing. As regards the fruit harvest, also, the year was on the whole inferior. The mango, orange, and lime crops were light and the crop of jack fruit the lightest yet known. The loss was partially recovered from a good yield of pineapples, lichees, and peaches. In the distribution of fruit trees, a considerable advance was made during the year; 353 plants having been sent out more than in the preceding year, and this in spite of the fact that the distribution of certain varieties was curtailed by the loss of young plants in the flood of 1894. Experiments on fodder crops, so far as they gave definite results, were failures, and the history of the exotic plantations for the past year was uninteresting. The working of the scheme for training gardeners, native and Eurasian, has been for some years past not entirely satisfactory. The scheme is under examination with a view to its improvement.

The total expenditure on the gardens during the year under report amounted to Rs. 15,858 and the total cash receipts to Rs. 12,898. Plants and trees valued at Rs. 538 were issued free of charge, so that the actual deficit on the year's work was only Rs. 2,422.

(15) Arboriculture.

The actual length of roads under avenues on the 1st of April 1895 according to the latest figures furnished by the District Boards was 8,435, to which 161 miles of new avenues were added during the year. The addition was mostly confined to second class roads, bringing the percentage of avenues on them from 40 in the preceding

year to 41 in the year under report.	The following table shows by divisions the num-
ber of miles under avenues and of tre	es planted during the year :-

	Division.		Length of avenues under operation during 1895-96.	Length of avenues at the close of 1594-95.	Length of avenues planted during 1895-96.	Total length of avenues at the close of 1895-96.	Total number of trees planted during 1895-96.
Meerut	•••	•••	687	865	25	890	18,164
Agra	***		360	1,424	8	1,432	10,917
Rohilkhand			459	796	14	810	7,361
Allahabad	,,,		942	1,969	19	1,988	10,741
Benares			320	760	20	780	6,791
Gorakhpur			224	475	80	505	6,784
Kumaun	,	•••	60	50	10	60	2,488
Lucknow	•••	4.44	535	949	30	979	4,599
Fyzabad	•••	•••	368	1,147	5	1,152	5,896
	Total		3,955	8,435	161	8,596	73,741

The districts in which the largest additions of new avenues were made were Bulandshahr, 14 miles; Mirzapur and Jaunpur, 9 miles each; Gorakhpur, 10 miles; Basti, 17 miles, and Sitapur, 18 miles. The average addition for the province was three miles only. With the exception of 12 districts, where arboricultural operations were wholly or partially under the control of the Public Works Department, the District Boards continued to retain the management of arboriculture in their own hands. The management of these operations by the Public Works Department for the most part were either costly or otherwise unsatisfactory.

The number of nurseries at the close of 1895-96 was 246 as compared with 243 in the preceding year, and the total expenditure on them amounted to Rs. 10,128 against Rs. 10,259 in 1894-95. The number of groves on which expenditure was incurred fell from 97 in 1894-95 to 93 in 1895-96, and the total area under them decreased from 650 to 640 acres. The expenditure under this head amounted to Rs. 1,467 as compared with Rs. 1,628 in 1894-95.

The total expenditure on district arboriculture amounted to Rs. 67,611 and receipts to Rs. 59,234 as compared with Rs. 71,963 and Rs. 51,365 respectively in the preceding year.

(16) Sericulture.

The experiments hitherto tried in this direction lead without doubt to the conclusion that it is almost impossible to rear silkworms in the hot climate of these Provinces. It was reported last year that a fresh supply of live cocoons had been indented for from Assam. The supply was received in August 1895 and contained 100 cocoons. The worms produced only three cycles up to the end of February 1896. The first cycle was a successful one; the second was a very poor one, and the third was a total failure owing to the death of all worms due to the effects of high temperature. In view of the above results it is now intended to give up the experiments.

(17) Promotion of Horse-breeding Operations through Civil Agency.

The Superintendent, Civil Veterinary Department, during the year inspected Imperial and Provincial stallions at various stands in these Provinces, attended eight shows, investigated an outbreak of glanders at Lucknow and on the Saháran-pur-Rájpur Dâk line, visited Káthgodám-Naini Tal Dâk line, was on the Board of Examiners at Ajmere Veterinary School and submitted three reports, one on the Provincial and two on the Imperial Military and Revenue Sections of his work.

Horse-breeding.—There were 67 Imperial and 48 Provincial stallions at work during the year and 3,034 and 2,465 mares respectively were covered by them. Besides the above stallions there were also 18 stallions issued on payment by the Civil Veterinary Department to Court of Wards estates and private persons; for these the incomplete returns available showed an average number of 18 coverings per stallion. Out of 1,957 coverings by Provincial stallions in the previous year it is estimated that 876 or 23 per stallion were successful, a result which the Superintendent considers good. Regarding the progeny the remarks of the Veterinary Officers were very satisfactory. It appears that undersized and underfed mares usually covered by the pony stallions give a progeny very much superior to themselves and which in the course of the next generation may give mares fit for breeding from Imperial stallions. The further improvement of stock by Provincial stallions must depend on an increase in the allotment for their purchase. At the end of the year there were 34 applications for the use of Provincial stallions uncomplied with.

Mule-breeding.—During the year under report eight donkeys were at work; but only 56 coverings were reported and it was not known how many of the last year's coverings were successful. There is a strong prejudice against mule-breeding in the North-Western Provinces and Oudh and only very inferior mares are brought to donkey stallions. It is probable that no great improvement can be hoped for until the Military Department agree to buy very young stock when bred from approved mares.

Prevention of disease.—During the year under report outbreaks of cattle-disease were reported from 27 districts, rinderpest having occurred in 26 districts. Veterinary Assistants, of whom there were 15 during the year, were employed in dealing with cattle-disease in their own districts and seven of them were also sent on special duty for the purpose to other districts. In the treatment of cattle-disease, progress is retarded by the insufficiency of the present staff and the entire want of skilled professional supervision. It is hoped that it may be feasible within the next five years to employ a competent Subordinate Veterinary Establishment in these Provinces consisting of nine senior assistants, or one in each division, and 45 junior assistants for districts. A number of cattle were treated at two small dispensaries one at Cawnpore under the Assistant Director of the Department of Land Records and Agriculture, and the other at Lucknow started by the District Board, Lucknow.

Cattle-breeding.—Such limited action as is taken in the matter of cattle-breeding is taken by the Agricultural Department. During the year under report, there were altogether 25 Government bulls at work in 18 districts of the United Provinces, including six supplied by the Department during the year. Of the 25 bulls, 19 were of Hissar breed, three of the Kanwaria, two of the Kosi, and one of the Parehar breed. In general, the results of breeding from Hissar bulls were favourably reported on by District Officers though in some districts the Hissar-bred calves are regarded as slow movers in comparison with the local breed. In Oudh and certain parts of the adjoining districts of Rohilkhand, the Khairigarh and Parehar bulls of Kheri which are far less expensive than Hissar bulls are highly thought of and appear to be better animals to breed from. The determination of the relative advantages of breeding from these different stocks in the different districts of the province is a matter of much importance and the quality of the progeny in the different cases will be closely examined. The work is being to some extent taken up by the wealthier Court of Wards estates; but on a scale which may well be enlarged.

(18) Experiments in Dairying.

The Aligarh Dairy Farm has been throughout the year held on lease by Mr. Keventer, formerly the manager under Government. The sale of butter has been greatly extended and has necessitated considerable additions to the dairy buildings. The present position is hardly satisfactory either for the lessee or for Government as the great extension of the business makes considerable capital expenditure necessary.

which it is not in the interest of Government to incur. Cheese-making has been also taken up by Mr. Keventer, and it has been shown that excellent cheese can be manufactured in India. To dispose of the separated milk a poultry yard and piggery have been started. The business is one which it is greatly to the public interest to maintain and promote, and arrangements by which Mr. Keventer's rights in it should assume a more permanent form are desirable.

Dairy farms at the Bareilly Lunatic Asylum and in several cantonments started on the model of the Aligarh Farm have been locally very successful.

(19) Manufactures.

An Inspector attached to the Department of Land Records and Agriculture was deputed to the districts in the Agra and Lucknow Divisions to make inquiries into the state of the principal indigenous handicrafts carried on in these districts. A summary of the information collected by the Inspector is given in Appendix D to the Annual Report on the Inland Trade for the year ending 31st March 1896.

Forests.

Areas.—The areas of the different classes of forests at the commencement and close of the year were as follows:—

		Reserve	I Forests.	Protected	l Forests.	Unclassed	Forests.
Circle.		1st July 1895	30th June • 1896.	1st July 1895.	30th June 1896.	1st July 1895.	30th June 1896.
Central Oudh School	***	Sq. miles. 1,715 1,243 * 807	Sq. miles. 1,715 1,243 * 808	Sq. miles. †9,319 	Sq. miles. † 9,319	Sq. miles. 80 	5q. miles. 30
Total		3,765	3,766	9,319	9,319	44	43

^{*} Inclusive of 85 square miles of leased forests.

The changes in the areas administered by the Department were thus unimportant, the aggregate remaining the same.

The 9,225 square miles of protected forest under the management of the Deputy Commissioners of Garhwál, Almora, and Naini Tal, not being administered by the Forest Department, will in future years be excluded from the returns. The only connexion of the Forest Department with these forests is that it pays for their upkeep and in return is credited with their revenues: they are managed by the Deputy Commissioners.

Forest settlements.—In the Central Circle the abstract of admitted claims and sanctioned privileges resulting from the inquiry under the last clause of section 34 of the Forest Act in the reserved forests notified under that section in the Kumaun Civil Division were duly published.

In other respects the progress effected during the year in this Circle was not satisfactory, and of the many new tracts undergoing settlement under Chapter II of the Forest Act, the only one finally notified under section 19 was the small deodár forest of Chattarpal. Various causes conduced to retard operations, the chief being pressure of work in other departments, which reduced the time at the disposal of the Forest Settlement Officers. Since the close of the year a code of instructions has been drawn up for the guidance of Forest Settlement Officers, which should have the effect of simplifying their task and giving uniformity to their proceedings.

[†] Includes 9,225 square miles of unmeasured lands in the hill country of the Imora, Naini Tal, and Garhwal districts, managed by the Deputy Commissioners.

In the Oudh Circle there are no forest rights outside the Pilibhit division. In the other charges of this Circle the Government Forests are burdened with obligations of the nature of terminable concessions only, and considerable progress has been made towards defining and recording these servitudes. Thus, completed records for the forests of Kheri and Bahraich have received the sanction of Government, whilst it has under consideration the record for the Gonda forests. For the Gorakhpur forests no record is required. Although it is believed that these sanctioned records make sufficiently liberal provision for the requirements of the ryots, the policy of the officers in charge will be to enforce them gradually and insensibly, so as to afford the people ample time to make other arrangements in those cases where they have taken advantage of the ill-defined concessions previously existing to maintain, at the cost of the State, an excessive proportion of cattle.

In the School Circle the 300 acres of the Uparla Song block, under settlement in the previous year, were finally notified as reserved forest, as also 756 acres of waste land in block No. 9, both tracts being in the Dehra Dun Division; whilst the revision and more accurate description of the forest boundaries in Jaunsar made good progress.

In the Oudh Circle a great deal still remains to be done before the permanent redemarcation of the forests with monoliths can be considered completed. The Conservator estimates the cost of the work already done at Rs. 25,000, and of the work remaining to be done at Rs. 15,000.

In the School Circle the forest boundaries are reported to be generally in good order.

Surveys.—In the Central Circle the chief work of the year under this head was the resumed survey of the Lalitpur forests, which has now almost reached completion, leaving little further to be done in respect to the forests of that Circle.

In the Oudh Circle 398 square miles were surveyed by the same agency (Forest Survey Branch of the Survey of India) in the Bahraich, Gonda, and Gorakhpur divisions, and 62 miles of boundary survey in the Kheri division. It is believed that the field part of the Oudh forest survey has now been completed, although much map work still remains to be done.

In the School Circle, where all the forests have been properly surveyed, the work of the year was of minor importance.

Working-plans .- In the Central Circle two new working-plans, embracing nearly the whole of the forests in the Garhwal and Ganges divisions, received the sanction of Government after the close of the year. On the other hand the workingplan hitherto in operation in the Naini Tal sub-divisional forests came to an end, rendering it necessary to make arrangements for replacing it. The delay experienced in bringing the settlement of these forests to a conclusion has necessarily retarded the framing of the new plan, which is not in a position to make provisions when it is not known to what extent rightholders and others may have to be provided for. Difficulties continued to be experienced in disposing of the timber rendered available under the Kumaun working-plan; but in view of the arrangements since made by the Conservator it is believed that these will now disappear. No working-plan has yet been taken in hand for the Bundelkhand forests, nor does this appear feasible in the absence of a more considerable market for the product—chiefly firewood—of these inferior woodlands. Attempts are being made to create such a market in Allahabad (some 60 miles distant by rail) in which large city firewood is very dear; and if the East Indian Railway can be induced to lower their rates of carriage to the desired limit, it seems certain that the future at least of the Banda forests will be assured to the great advantage of the population of Allahabad.

In the Oudh Circle two new working-plans received Government sanction during the year: that for the Kanjuria range of the Kheri division, and that for the Chakiacharda range of the Bahraich division.

In the School Circle the revision of the Malkot forests working-plan could not be undertaken, owing to press of other work. A revised plan, supplementary to the general working-plan for the Dehra Dún forests, was drawn up for the sissu forests, and received the sanction of Government after the close of the year; and a working-plan was completed for the Saharanpur forests.

In all three circles, therefore, the progress made under this head was satisfactory.

Communications and Buildings.—The nature and cost of the works executed under this head during the year are summarized, and compared with the results of the previous year in the following table:—

		Roads and	l Bridges.	Build	ings.	Other		
Gircle.	•	New works	Repairs.	New works.	Repairs.	works.	Total.	Percentage. on gross expenditure
		Rs.	Rs.	Rs.	Rs.	Bs.	Rs.	
Central Oudh School	***	3,264 4,252 3,390	26,294 9,075 7,883	3,330 22,773 4,994	5,173 6,002 5,515	1,191 8,352 1,813	39,252 45,454 28,595	12·24 15·08 7·61
Total	"	10,906	43,252	31,097	16,690	6,856	1,08,301	11.62
Total, 1895-96	•••	54,	158	47	787	6,356	1,08,301	11.62
Total, 1894-95	,	64,	721	58,	576	6,444	1,29,741	18.39

In the Central and Oudh Circles there was thus a considerable decrease of expenditure as compared with the previous year. This result was due in part to the request made by Government that works not of an urgent or pressing nature might be deferred, and in part to the circumstance that the requirements of all three circles in new roads and buildings are approaching completion.

Breaches of the Forest Law.—The following table compares the results of the year under this head with those of the previous year:—

•			Cases taken	into Court.		Cases compounded			
Circle.		Convic	tions.	Acqui	ttals.	Percentage of persons convicted	under section 67.		
			Persons.	Cases.	Persons.	to persons prosecuted.	Савев.	Persons.	
(1894-95	,,,	39	66	8	15	81	343	698	
Central { 1894-95 1895-96		37	66	12	22	75	418	851	
(1894-95	,	53	118	13	44	78	85	200	
Oudh { 1894-95	•••	45	87	4.	20	81	82	335	
School { 1894-95		12	17	3	5	77	102	250	
School { 1895-96	·	23	56	4	6	90	137	287	
(1894-95		104	201	24	64	76	530	1,148	
$_{ m Total} \dots egin{cases} 1894-95 \ 1895-96 \end{cases}$		105	209	20	48	81	637	1,473	

These figures do not call for comment. The high percentage of convictions and the relatively small number of cases taken into Court tend to show that the officers of the Department are sufficiently forbearing in their dealings with the public. In a

year of drought and scarcity, such as the period under review, the number of cases might reasonably have been expected to reach a higher figure than is recorded above, and the contrary speaks well for the people and for the officers of the Department.

Protection from fire.—The following table compares results with those of the previous year:—

previous	Circle.		Total area of Circle.	attempted to protected.	go of area ted to total Circle.	actually pro- ed.		entrgoof res.	during the	st per acre actu- ally protected.
•		Total area	Aren att	Percentage o attempted area of Circ	Aren acted.	Failures.	Percen failures.	Cost year.	Cost per	
			Acres.	Acres.		Acres.	Acres.		Rs.	Pies.
	(1894-95	144	1,176,911	753,294	64.01	750,445	2,849	0.38	24,434	6.25
Central	{ 1895-96		1,177,195	771,815	65·56	698,075	73,740	9.55	29,269	8 05
	(1894-95	•••	795,297	611,099	768±	600,862	10,237	1.67	19,942	6.37

	(1894-95	,	525,395	429,881	81.82	427,953	1,928	0.45	7,760	3.48
School	··· { 1895.96	,	524,945	436,865	83-25	416,572	20,293	4.64	9,382	4.32
	(1894-95		2,497,603	1,794,274	71.84	1,779,260	15,014	0.84	52,136	5 63
Total	{ 1895-96	•••	2,497,437	1,817,723	73.18	1,608,796	208,927	11.49	60,788	7.25

The season was one of the worst hitherto experienced for fire-conservancy, there having been practically no rain between October 1895 and the middle of June 1896, an interval of some eight months. The results were correspondingly disastrous in all three Circles, although the School Circle came off best with 31 square miles burnt, against 115 in the Central Circle and 180 in the Oudh Circle.

While the prolonged drought lent itself to easy combustion and the extended spread of forest fires, there were other influences at work to reduce the success of the year's fire-conservancy operations. Bad harvests, and the scarcity of food for man and beast, necessitated the opening of the Bundelkhand forests to a starving people and their cattle, and doubtless had elsewhere also the effect of tempting the people to intrude on the fire-protected areas to an uncommon extent in search of honey, fruits, roots and other edible produce. Insufficiency of good cattle-fodder, again, and a desire to improve its quality and quantity by firing the dried-up crop of grass, or, as in the pine forests of the Kumaun hills, by firing the carpet of freshly-fallen needles in which all grass is liable to be buried for a brief period in each year, have also to be included among the unfavourable conditions prevailing.

Regulation of grazing and protection from cattle.—The following table compares the results of the year under this head with those of the previous year:—

	Circle.		Total forest area.	Open to cattle.	Buffaloes gruzed.	Bullocks and cows grazed.	Sheep and goats grazed.	Other animals.
Central Ondh School			Sq. miles. 1,839 1,248 821	Sq. miles. 1,114 504 554	No. 57,748 31,319 11,914	No. 207,888 173,839 66,979	No. 72,317 5,883 75,982	No. 4,727 444, 21.464
Total,	{ 1895-96 } 1894-95	:::	3,903 3 903	2,172 2,328	100,981 113,961	448 201 474,876	154,132 184,708	26,635 21,759

There was thus a diminution of 156 square miles in the areas open to grazing, 112 square miles in the Oudh Circle and 44 square miles in the School Circle. In the

Oudh Circle the decrease is the result of the sanctioned records of concessions which provide to this extent for the contraction of the area open to grazing. The reasons for the decrease in the School Circle have not been given. In the Central Circle there was an increase during the year of some 56,000 head of horned cattle in the animals provided for by the Government forests, while in the Oudh Circle the number decreased by 110,000. In the Central Circle the general opening of the Bundelkhand forests, previously referred to, accounts for the increase.

The total number of cattle of all kinds which had recourse to the Government forests during the year was 729,949 as compared with 795,304 in the previous year, and, with reference to the subject of grazing dues, can be classed as follows, the figures of the previous year being brought forward for purposes of comparison:—

			1895-96.	1894-95.

The Banda forests have been fully settled under Chapter II of the Forest Act, and are burdened with but few rights, while, although notified under section 34 of the Act, it has been decided that no further inquiry is necessary in the ease of the Lalitpur forests, which are altogether free from rights. The only areas remaining to be settled in the Bundelkhand division are consequently the Jhansi forests. With reference to the two former tracts, therefore, if the excessive grazing which was complained of by the Conservator is not connected with a very low scale of grazing rates (in Banda two amas per cow and four amas per buffalo per annum, elsewhere half those rates), it must be due to the circumstance that the ryots have not sufficient resources at their command in the unreserved and private waste lands lying outside the areas managed by the Forest Department. It has to be recollected, moreover, that a series of bad seasons has made the people of Bundelkhand more than usually dependent on the stored-up wealth of the reserved forests, which have doubtless suffered in consequence. The whole subject will be specially considered.

Natural reproduction.—All three Conservators refer to the abundant seeding of the more valuable timber species, the ultimate results of which would, however, appear to have been rendered nugatory by the excessive drought which followed.

Artificial reproduction.—The Conservator of the Central Circle is of opinion that the Chaubattia fruit garden has fulfilled its mission and should now be sold. He explains that Forest Officers are but seldom horticulturists, and that the fruit trees are not as well looked after as in former times when Government paid Rs. 150 a month to a Superintendent to work the garden on professional principles. Several Europeans have started fruit gardens in the Kumaun hills in recent years, and that the Government establishment at Chaubattia, while no longer indispensable for distributing purposes, is injurious to their interests and a recurring source of unpleasantness. The matter will be considered during 1897.

In the School Circle numerous cultural operations appear to have been performed, but with very mixed success.

Extraction and Transport.—In the Oudh Circle water carriage is being abandoned wherever railway communication exists, and in those localities where both means of extraction are wanting, much forest produce of the less valuable kinds runs to waste. Even where railways have been constructed there is a difficulty in obtaining earriage, owing to the scarcity of rolling-stock and to the fact that suitable wagons. are not available. In Gorakhpur the export of fuel is stated to have been seriously hampered on this account. The extension of the Bengal and North-Western Railway Company's system is said to have greatly reduced the available carriage for the extraction of forest produce, which—at any rate in the shape of fuel—can only be moved at special cheap rates, which cease to be effective when the wagons can be more remuneratively employed by the company. The scarcity of rolling-stock is, however, a temporary difficulty that is capable of remedy: and it may be assumed that the Railway Company will in their own interests increase their supply of carriage so as tosecure the full profits of their extended system. In the meantime the Oudh Circle is far better placed than the two western Circles as regards facilities for export, although in the Central Circle the Najíbabad-Kotdwára section of the Oudh and Rohilkhand Railway will be open for traffic before the end of 1896.

Gross Yield and Outturn of Forest Produce.—The following table gives the total outturn of the forests of the three Circles, and compare it with the results obtained in the previous year:—

Thus every head shows a considerable decrease as compared with the figures of the previous year.

Reviewing the results by Circles, the Central Circle shows a small increase of outturn under timber and a notable falling off under firewood and minor produce (which is here made to include bamboos). The falling off under fuel was due in part to an assumed over-estimate in 1894-95 of the quantities of firewood removed by right-holders and in part to large purchases of wood for charcoal manufacture having been made by the contractor employed on that account in the Naini Tal division towards the close of the previous year, with the result that the returns of this division for 1894-95 show an abnormal increase in the outturn at the expense of the ensuing year. This decrease under fuel in the Central Circle is consequently more fictitious than real.

The smaller outturn of minor produce in this Circle occurs under bamboos from the Ganges and Garhwal divisions, and had in part been anticipated and prepared for, as the exports of the previous two years were known to have been on an excessive scale; but the bad harvests and consequent inability of the ryots to make purchases under this head tended to still further reduce the outturn.

The Oudh Circle returns show considerable decreases, under every head—timber, fuel, and minor produce.

The decrease under timber and fuel amounts to 4,730,780 cubic feet, and is made up of—

In explanation of the large decrease in the outturn by purchasers, it is pointed out that the figures of the previous year were inflated to an unnatural extent by the incorporation in the returns of fuel properly belonging to the year 1893-94, and by the sale of improvement fellings in the Gorakhpur division, which were not sold either in 1893-94 or in 1895-96.

The decreased outturn by rightholders, privileged persons, and others is explained by the stricter definition of the concessions in this circle.

The decrease under minor produce is almost wholly confined to "grazing," and is attributed to the exclusion of goats and sheep from the Bahraich forests and to the restriction of grazing privileges in the same charge.

In the School Circle diminished outturns occur under timber and minor produce, while a considerable increase (276,000 cubic feet) took place under fuel. Fewer deodár and chir trees were sold during the year in the Jaunsár division, and there was a reduction in the number of Jammu Gújars' cattle admitted into the forests, and a falling off in the prices realized for minor produce disposed of by auction in the Dehra Dún and Saháranpur divisions.

Financial.—The financial results of the year were—

Receipts Expenditure—	••	 ***	**	•••		R ₅ . 14,66,862
A.— Conser	vancy and	 ***	•••	•••	Rs. 5,29,088 \ 4,02,780 \}	9,81.868
				Surplus		5,34,994

These figures compare, circle by circle, with the figures of 1894-95, and with the average of the three previous forest years (1892-93 to 1894-95) as follows:—

	Receipts.				xpenditur	e.		Surplus.	
Circle.	Average of three forest years, 1802-93 to 1894- 95	Forest car, 1894-95.	Forest year, 1895-96.	Average of three forest years, 1892-93 to 1894.	Forcat year, 1804-95.	·Forest year, 1895-96.	Average of three forest years, 1892-93 to 1894.	Forest year, 1894-95.	Forest year, 1895-96.
Central Oudh School	Rs. 5 99,882 6,78,717 4,03,97	Rs. 6,20,783 6,09,509 4,34,451	4,98,648	3,41,870	R ₉ . 3,61,682 3,12,659 2,94,870	3 01,272	Rs. 2,76,125 3,36,847 1,09,470	Rs. 2,59,101 2,96,850 1,39,581	Rs. 2,46,572 1,97,376 91,046
Total for the Prov- ince.	16,52,575	16,64,743	14,66,862	9,60,136	9,69,211	9,31,868	7,22,442	6,95,532	5,34,994

The gross receipts have thus decreased, the surplus of the year under review being Rs. 1,60,538 less than that of the previous year, and Rs. 1,87,448 less than the average of the triennial period beginning with 1892-93 and ending with 1894-95. In the School Circle, if account be taken of the fact that large quantities of firewood made over to the Commissariat Department towards the close of the year had not been paid for, and that the season was an unfavourable one for trade, the falling off is perhaps no more than can be reasonably expected; and for the last-named reason the decline in the Central Circle may be similarly dismissed from discussion. But in the Oudh Circle matters wear a different aspect. Compared with the triennial period the gross revenue decreased in that Circle by Rs. 1,80,000 and the surplus by Rs. 1,39,000 while the surplus of 1895-96 is less by Rs. 99,000 than the surplus of 1894-95. This state of things is principally due to the gradual disappearance of the valuable timber stocks accumulated in former years by departmental agency, of which the sale, counterbalanced by no corresponding outlay, had for some years past given to the Oudh Circle revenues a fictitious and unreal appearance of prosperity, having no connection with the normal productive capacity of its forests and normal conditions of working. But the bad harvests and consequent depression in the timber trade already noticed had an important influence on the returns of the Ondh Circle for the past year.

The value of timber and other forest produce in stock at the beginning and close of the year, and the net summary of the year's financial transactions, are shown in the following two statements:—

			Contral.	Oudh.	School.
Timber and other At beginning of year At close of year	•••	 Total	 Rs 22,866 6,264 —16,602	Rs. 83,204 61,699 —21,505	R ₉ 2,27,738 2,12,517 —15,221
Net summary of the year Cash surplus Increase or decrease of stoc Ditto debt	• •	transactions Total	 2,46,572 15,565 530 	1,97,376 5,673 37,911 +1,53,792	91,046

The accumulated stocks of the Oudh Circle were thus diminished by Rs. 21,505, and the value of the stock in hand at the close of the year declined to Rs. 61,699. The estimated loss of income involved by free grants, removals by rightholders, under privileges, &c., has been estimated at—

TRADE.

Registration of Traffic.

The following traffic was registered during the year :-

- (1) Traffic with Tibet and Nepál.
- (2) Internal traffic by road and river of the districts of Rae Bareli, Sultánpur, Partábgarh, Fyzabad, Jaunpur, Azamgarh, Gházipur, and Ballia.
- (3) Traffic by rail with the ports, native states, and other British Provinces.

Foreign Traffic.

The amount and value of the foreign trade of these provinces as returned during the year under report are detailed below and contrasted with the returns for the two preceding years:—

Amount.

The total foreign trade has improved both as regards weight and value during each of the past two years. In the details however there have been variations; which may be briefly referred to.

^{*} Inclusive of arrear balances.

Trade with Tibet.-The trade with Tibet is of comparatively small extent and value. The import trade shows an increase of 4,893 maunds in weight and a decrease of Rs. 1,19,734 in value; while an increase of 22,478 maunds in weight and of Rs. 1,67,212 in value is noticeable in the export trade. The small expansion in the volume of imports took place in the receipts of salt; while the decrease in the value was caused by diminished imports of borax, wool, horses, and cattle. The substantial improvement in the export trade occurred in the despatch of larger quantities of cottongoods, grain, and sugar. The trade in borax is gradually declining; while that in salt and wool shows no marked variation. The export trade in grain has perhaps been depressed by the high prices prevalent in Himalayan districts for the past few years. In cotton-goods and sugar the exports for 1895-96 are the highest on record—for sugar they are nearly three times as high as during the best of the past twelve years, and • more than four times higher than the average for that period. Little reliance can be placed on the record of export of silver. The export this year, when the balance of value is but little against these provinces, is double what it was last year with a large excess of imports over exports.

Trade with Nepal.—The trade with Nepal is far more considerable than that with Tibet. It comprises about 95 per cent. of the total external trade of these provinces. In 1894-95 there was some revival in the import trade from Nepál. In the year under report a further improvement took place both in the weight and value of the articles imported; the increase in weight over last year being 146,432 maunds and in value Rs. 7,64,101. The expansion in the import trade is shared by all the chief articles of import except timber and, as it chiefly occurs under the head grain and oilseeds, it may be attributed partly to the short crops harvested in these provinces in 1894-95; and partly to the fact that grain was less freely exported from Nepál in the preceding year owing to a tour of the Raja in the western lowlands of Nepal. The import trade in hides of cattle, which had undergone a diminution to the extent of over a lakh of rupees in value in 1894-95, recovered slightly during the year under report owing, it is said, to the great mortality among cattle which prevailed during the year in the Nepál Tarái. The trade in timber on the other hand which rose by over 23. lakhs of maunds in 1894-95, diminished by over one lakh of maunds during the year under report. The exports to Nepál in 1894-95 exhibited a decline of 15,000 maunds in weight, and a rise of about 9½ lakhs of rupees in value. In 1895-96 they increased by 5,603 maunds in weight and fell off by nearly eight lakhs of rupees in value. The slight increase in the weight of exports occurred under salt and sugar while the very large decrease in value was caused by diminished despatch of cotton-goods, the export of which was unusually large in 1894-95, and which more than sufficed for local consumption in that year. Traders with Nepil complain of the impost of local taxes both on imports and exports, but it does not appear so far that the volume of trade has been materially affected.

Rail-borne traffic.

The total rail-borne traffic of the year 1895-96 is compared below with that of the preceding two years:—

		w	eight in maun	ds.	Value in rupees.			
		1893-94.	1894-95	1895 96.	1893.94.	1894-95.	1895-96,	
Imports	•••	2,50,79,962	3,94,76,973	3,50,59,695	13,67,10,073	15,59,26,358	14,99,77,247	
Exports	***	2,77,47,597	2,67,24,171	2,54,22,478	18,58,10,580	20,09,51,497	18,97,16,134

The extension of the import traffic and decline in exports, which were the marked features in the statistics of 1894-95, have been maintained, though not to the same amount, during the year under report. In 1895-96 the crops in the Panjáh were not plentiful and the imports were consequently on a much smaller scale than in the previous abnormal year. The total imports have, however, far exceeded the average imports of the past five years. The volume of the export trade shows a continuous decline during the past two years. The value of exports in 1894-95 exceeded that of the exports of the previous year owing to a higher value having been assigned to opium in that year.

The following table compares the traffic in each of the principal articles of export and import in the year under report with their traffic in the preceding two years:—

	Art	icles.			1893-94.	1894-95.	1895-96.

In 1895 the cotton crop was sown over a comparatively small area; but the light autumn rains proved very beneficial, and an unusually good crop was harvested. The export of cotton rose from 5,64,577 maunds to 16,49,137 maunds, the largest figures during the last six years. The imports at the same time rose from 2,00,162 to 2,33,061 maunds to meet the demands of local mills. The value of the net exports amounts to about two crores and twenty-eight lakhs of rupees as compared with about sixty lakhs of rupees in the year before, showing an increase of one crore and sixty-eight lakhs of rupees which the province realized from this crop.

The area under wheat harvested in 1895 was about 5 per cent, below that of the preceding year. The crop was planted in an unusually moist soil and early began to shown signs of injury from disease. The continuance of wet and cloudy weather throughout the season and the strong winds that blew while the crops were ripening seriously reduced the produce and shrivelied the grain in all parts of the province, except the Meerut and Agra Divisions, where the yield was good. The exports of wheat accordingly declined from 37,15,970 to 35,80,712 maunds. The imports, however, fell from 31,05,056 to 14,33,991 maunds, so that the net export rose from 6,10,914 to 21,46,712 maunds.

The imports of grain other than wheat declined from 143 to 78 lakhs of maunds; and the exports from 39 to about 24 lakhs of maunds. The net imports retained for local consumption amounted to 54 as compared with 103 lakhs of maunds. The net exports of all kinds of food-grains, which in 1892-93 amounted to 1,43,87,006 maunds, sunk to 33,42,977 maunds in 1893-94. In 1894-95 when the imports of

food grains were the largest on record, there was a net import of food grains to the extent of 97,50,058 maunds. In 1895-96 there was also a net import of food grains to the amount of 32,72,185 maunds. An examination of the value of the trade in foodgrains shows that while the province realized about four erores of rupees in 1892-93 and one crore in 1893-94 by sale of its surplus food stocks it had to pay about one anda-half crores of rupees in 1894-95 and sixty-two lakbs of rupees in 1895-96 to bring its food-supply up to the requirements of the people.

The quantity of oil-seeds exported during the year under report declined from 41,76,931 to 26,51,524 maunds, while the imports rose from 3,51,582 to 5,37,980 maunds. The exports are about half the average of the last five years, which amounts to 50,21,711 maunds. The decrease in the export trade is entirely due to the linseed. and rapeseed crops harvested in 1895 having been attacked by fungoid diseases in nearly all districts owing to the continuance of wet and cloudy weather.

The light rains of 1895 proved very beneficial to indigo, and the produce was the best that has been known for some years past. The export rose from 48,600 to 68,838 maunds; the average annual exports of the past five years being 44,709 maunds. The price realized amounted to one erore and twenty-niue lakks of rupees as compared with $86\frac{a}{4}$ lakks of rupees in the preceding year, showing an increase of 424 lakhs of rupees. The decline in the imports of cotton-goods and metals other than iron was owing to Agricultural depression.

Road and river traffic.—The posts located in 1894 for the registration of road traffic in the districts of Meerut, Bareilly, Bijnor, Budaun, Moradabad, Shahjahanpur, Pilibhít and Naini Tal, were maintained during the year under report. As compared with last year there has been a small decrease in imports to Pilibhít and in exports from Shahjahanpur. Elsewhere an increase took place in the import and export trade carried by road. The increase is partly due to the fact that the figures for 1894-95 were for eleven months only, while those for 1895-96 are for the full year; and partly to the abnormal nature of the season which led to the movement of grain on an extensive scale to neighbouring districts where supplies were deficient.

The registration of three years' traffic in Rohilkhand will be completed on 31st March 1897, and it is intended to move the registration staff next year to the Meerut Division in compliance with the wishes of the Public Works Department.

PUBLIC WORKS.

(a)—Buildings and Roads.

The following is a review of the operations in each of the three Circles of Superintendence during the year.

> FIRST CIRCLE. IMPERIAL SERVICES. Civil Works.

No important works were undertaken under this head.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Adminstration.

Bijnor district.—Constructing a new tahsili at Nagina.

The girders and racks for the work were obtained from the Roorkee Workshops, but the work was stopped for want of funds. An expenditure of Rs. 4,968 was incurred against an estimate for Rs. 16,942.

Medical.

Agra district.—Additions and alterations to the Medical School buildings at

There are four works comprised under this head, viz., the dissecting room, remodelling the lecture room, the examination hall, and the tineture room. The two former were completed last year, and the latter two buildings have practically been completed during the year under roport, with the exception of a few small items. The allotment for 1895-96 was Rs. 20,000, but it was subsequently reduced by Rs. 1,000. The construction of these buildings has supplied a want long-felt at the Medical School at Agra, and forms a suitable addition to the surrounding buildings.

Agra district.—Constructing four nurses' quarters in the Maternity Hospital at Agra.

This work was fully noticed in last year's report. It has been completed this year at a cost of Rs. 8,617 against an estimate of Rs. 8,382.

Monuments.

Agra district.—Conservation of certain buildings of historical architectural interest at Fatchpur-Sikri.

This work was noticed in last year's report. The estimate amounts to Rs. 8,860, and of this amount Rs. 2,352 were spent in 1894-95. An allotment of Rs. 5,800 was made for 1895-96, but was reduced to Rs. 3,800, which sum was fully utilised.

Agra district.—Restoration of certain buildings of historical interest at Fathpur-Sikri.

The estimate for the work amounts to Rs. 12,013, and the allotment of Rs. 4,730 made during the year has been utilised, as far as possible, towards restoring to their original state a few of the most important buildings.

COMMUNICATIONS.

1st CLASS ROADS.

Dehra district.—Collection of materials in connection with the raising, bridging and metalling of the Dehra and Rampur Mandi road.

The estimate for this work amounts to Rs. 44,531, and from this amount Rs. 8,000 have been expended during the year on the collection of stone motal required for the first eight miles of the road.

Saharanpur district.—Repairing the damage done to the Kandhour bridge.

The damage to the Kandhour bridge caused by the heavy flood of 1804, and the protective works it was decided to carry out, were fully dealt with in last year's report.

An estimate amounting to Rs. 31,894 was sanctioned in July 1895, but the work had been put in hand in anticipation of sanction during the cold weather of 1894-95. The work was completed in June 1895 at a cost of Rs. 32,658.

Saháranpur district.—Protective works in the Mohan Pass.

The damages to the road through the Mohan Pass resulting from the floods in July 1894 were detailed in the report of 1894-95, and reference was made to the protective works of a permanent nature that were to be carried out in 1895-96. An estimate amounting to Rs. 26,127 was sanctioned for these works, which were really put in hand in March 1895, in anticipation of sanction. The works included in this estimate were the construction of (a) retaining walls, (b) breast walls, (c) cisterns on the up-stream side of the culverts, (d) falls on the down-stream side of a few of the culverts, and (e) cutting catch-water drains where they were required. The whole of the works were completed by July 1895 at a cost of Rs. 24,419.

Saharanpur district .-- Widening the Mohan Pass.

An estimate amounting to Rs. 12,889 was sanctioned for the work, which donsisted in increasing the width of metal from 16 to 20 feet. A 9" coat of metal was laid down on all the seven miles of road through the Pass for a width of 20 feet. The work was commenced in July 1895, and completed in September 1895 at a cost of Rs. 12,909, Dehra district.—Certain protective works in the Mohan Pass.

These works were undertaken with a view to prevent the recurrence of the serious slips which blocked the road through the Mohan Pass in 1894, and were practically finished by the setting in of the rains of 1895. These works consisted of constructing revenuent walls, drains and cisterns in the culverts. The estimate amounts to Rs. 3,186, and the work was completed at a cost of Rs. 3,178.

Meerut district.—Constructing left approach road to the Rámganga Railway bridge on the Meerut, Moradabad and Bareilly road.

Noticed in last year's report. The work has since been completed at a cost of Rs. 29,997 against an estimate of Rs. 31,706.

Moradabad district.—Constructing right approach road to the Rámganga Rail, way bridge on the Meerut, Moradabad and Barcilly road.

The estimate for this work has been revised and now amounts to Rs. 13,355. An expenditure of Rs. 8,952 has been incurred during the past year, and the work has been completed up to the year's allotment.

Moradabad district.—Renewing the roadway of the Gangan Nadi bridge on the Meerut, Moradabad and Bareilly road.

This work was fully noticed in last year's report. The work has since been completed at a cost of Rs. 24,263 against an estimate of Rs. 26,311.

Moradabad district. Raising the Meerut, Moradabad and Barcilly road in mile 14 near the Kosi Railway bridge.

The estimate amounts to Rs. 6,890 and an expenditure of Rs. 6,144 has been incurred on the work up to 31st March 1896. The work has been completed, but consolidation of one coat of metal remains to be done.

LOCAL INCORPORATED FUNDS.

Civil Buildings.

Educational.

Meerut district.—Constructing a Tahsíli School at Hápur.

An expenditure of Rs. 1,839 has been incurred during the year on the connection of materials. The estimate as originally sanctioned amounts to Rs. 7,068, but a supplementary estimate for the compound wall and compensation for land has been submitted for sanction.

Etáwah district.—Constructing a new Tahsíli School at Aheripur.

This work has been fully noticed in last year's report. The remaining works have been carried out this year.

Contribution Works.

Sháhjahánpur district.—Constructing a new dispensary at Tilhar.

This work was noticed in last year's report. It has since been completed at a cost of Rs. 10,894 against an estimate of Rs. 10,895.

Dehra district.—Additions and alterations to the Great Trigonometrical Survey Office at Dehra Dún.

Noticed in last year's report. The work which consists chiefly in re-arranging the accommodation in the east half of the main block to suit present requirements and in substituting jack arched roofs on rolled-iron beams for the old terraced roofing on wooden beams, which had for some time been in a more or less rotten and unsafe condition, has been completed at a cost of Rs. 10,516 against an estimate of Rs. 10,000.

Bureilly district. Recooning and rebuilding parts of the Aonla dispensary at Bareilly.

Work completed for Rs. 8,582 against an estimate of Rs. 8,283.

Communications.

Moradabad district.—Raising from 2nd to 1st class the last 18 miles of the Moradabad and Sambhal road.

Mentioned in last year's report. Work completed at a cost of Rs. 50,421 against an estimate of Rs. 49,988.

Bijnor district.—Converting the Chandpur, Nurpur, Tajpur and Seohara road from 3rd to 2nd class.

The estimate for the work amounts to Rs. 43,278, and an expenditure of Rs. 1,659 has been incurred during the year on collection of materials for a dip.

Budaun district.-Metalling the Ujhani and Sahaswan road.

This work was noticed in last year's report. The estimate amounts to Rs. 38,950—out of 15½ miles 11½ have been completed at a cost of Rs. 32,962.

Muzaffarnagar district.—Metalling six miles of the Muzaffarnagar and Bijnor road.

The estimate amounts to Rs. 38,350 and an expenditure of Rs. 23,315 has been incurred on the work. Nothing however has been done during the year, as the allotment made for the work was transferred to other more important works.

Aligarh district.—Reconstructing the Chatree bridge over the Kali Nadi on the Sasni, Nanu, Dádon and Sankra road.

Noticed in last year's report. An expenditure of Rs. 27,676 has been incurred on the work against an estimate of Rs. 46,345.

All wells of the piers, abutments and wing-walls sunk to full depth. The corbelling of new pier walls has been completed, and eight feet superstructure on it. The coffer damming of new abutments and wing-walls' wells is in progress to admit of corbelling work being done.

Aligarh district.—Restoring the Kali Nadi bridge on the Aligarh and Ramghat road.

This work was noticed in last year's report. The work has since been completed at a cost of Rs. 29,733 against an estimate of Rs. 29,529.

Meerut district.-Metalling the Meerut and Baghpat road.

The estimate amounts to Rs. 23,419 and an expenditure of Rs. 18,927 has been incurred on the work, Rs. 8,016 of which have been expended during the year. The road has been completed up to the 22nd mile, and the collection of metal for the 23rd, 24th and 25th miles is in hand. The work was noticed in last year's report.

Bulandshahr district.—Improving the Khurja and Pahasu 3rd class road. This work has been completed at a cost of Rs. 9,262 against an estimate of Rs. 8,477.

Agra district.—Metalling the Agra and Fatehabad road.

This work was noticed in last year's report. Out of the 18 miles of the road which it was proposed to metal, 13 miles have been completed in all respects. Five miles of consolidation and one mile of collection remain to complete the whole project. The total expenditure to the end of 1895-96 has been Rs. 27,499 out of an estimate of Rs. 30,950.

Etawah district.—Providing additional waterway in mile 16 of the Etawah, Bewar and Fatehgarh road.

Noticed in last year's report. The work has been completed at a cost of Rs. 6,426 against an estimate of Rs. 6,636. The entire mile has been raised, and two new culverts besides an additional arch to an old culvert provided.

Miscellaneous Public Improvements.

Etah district.—Improving the drainage of the town of Kasganj.

The Municipal Board of Kásganj having deposited Rs. 10,428 to the credit of the Public Works Department for this work towards the close of the financial year, 1895-96, the work was undertaken by this department, and every effort was made to

PRODUCTION AND DISTRIBUTION.

109

push on the work as fast as possible. The excavation of the two main drains has been completed, and good progress has been made on the masonry works. An expenditure of Rs. 5,037 has been incurred during the year on collection of materials, and carrying out the work above referred to. The project will probably be completed during 1896-97, and when completed will, it is hoped, considerably improve the sanitary condition of Kásganj.

Moradabad district. Draining the town of Amroha.

This work was mentioned in last year's report. The work has been completed at a cost of Rs. 7,192 against an estimate of Rs. 7,747.

SECOND CIRCLE.
IMPERIAL SERVICES.

CIVIL WORKS.

Opium.

Sitapur district.—Constructing an opium godown at Khairabad.

This work was noticed in the last year's report. It has been completed at a cost of Rs. 16,619 against an estimate of Rs. 16,161.

Postal.

Lucknow district.—Re-roofing out-houses attached to the Hazratganj Post-office, Lucknow.

This work was noticed in the last year's report. It was postponed for want of funds, and has been completed during the year at a cost of Rs. 7,513 against an estimate of Rs. 8,610.

Minor Departments.

Naini Tal district.—Constructing a Bacteriological Laboratory at Muktesar.

The work, which has been noticed in the last year's report, had nearly been completed with the exception of tanks for gas-holders and shed for producers. The total expenditure on the main buildings was Rs. 66,905 up to 31st March 1896, against an estimate of Rs. 83,109. An estimate for furniture and fittings required for these buildings was sanctioned in Government of India No 509B., dated 16th December 1895, for Rs. 19,279 against which an expenditure of Rs. 5,325 only was incurred during the year under review.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Administration.

Naini Tal district.—Conversion of "Sherwood." House into a suitable residence for His Honor the Lieutenant-Governor at Naini Tal.

The observations, showing that the old cracks had enlarged, and new ones having appeared in the walls and floors of the old Government house, as also in the surrounding hills, it was evident that some movement was taking place in the foundations. The building was accordingly considered dangerous and vacated by His Honor and "Sherwood" House taken over as a residence. Certain additions and alterations were necessary before "Sherwood" could be rendered suitable for its new purpose, and an estimate amounting to Rs. 18,000 was sanctioned to carry out what was necessary. At the close of the year the private appartments in "Sherwood" had been completed, the public reception room was approaching completion, the roof girders in the ball room were in position and materials for the work had been collected. The total expenditure incurred up to 31st March 1896 was Rs. 5,491 against an amount of Rs. 18,000 then sanctioned for these works.

* Naini Tal district.—Additions and alterations to the building formerly occupied by the Diocesan Girls' School at Naini Tal for the accommodation of the Secretariat Offices

The work, which has been fully noticed in the last year's report, was completed at a total cost of Rs. 23,115 against an estimate of Rs. 17,833.

Naini Tal district.—Purchase of one block of Municipal barracks at Talli Tal for the accommodation of Secretariat chaptrasies.

This barrack was purchased from the Naini Tal Municipality at a cost of Rs. 13,275. The work was sanctioned for Rs. 13,275 and completed at a cost of Rs. 13,329.

Naini Tal district.—Constructing new Kutchery buildings at Naini Tal.

This work has been nearly completed. The total expenditure up to 31st March 1896 was Rs. 1,03,301 against an estimate for Rs. 1,09,370. With the exception of the tower and turrets, the other works were practically finished and the building occupied by the Secretariat at the end of March.

Lucknow district.—Laying on Municipal water to the Government House, Lucknow.

This work has been completed during the year at a cost of Rs. 6,273 against an estimate of Rs. 7,856.

Law and Justice.

Lucknow district.—Additional accommodation for the Additional Judicial Commissioner of Oudh, Lucknow.

The work has been completed at a cost of Rs. 7,818 against an estimate of Rs. 7,856.

Hardoi district.—Construction of a Civil Court House at Hardoi.

This work has been stopped for want of funds. The fair estimate is not yet sanctioned, but materials have been collected up to the value of Rs. 9,418 against the estimate of Rs. 9,500 sanctioned for their collection.

Gonda district.—Constructing a new Judge's Court at Gonda.

The estimate amounting to Rs. 31,004 was sanctioned in June 1895. The work is in abeyance pending an allotment of funds. The expenditure up to the end of March 1896 on the collection of materials was Rs. 10,063. Record racks have also been completed for this building under a separate estimate amounting to Rs. 4,826.

Unao district.—Constructing a Sessions Court house at Unao.

This work was noticed in last year's report, but the work was stopped for want of funds; no expenditure appears to have been incurred during the year under review.

Communications.

Naini Tal district.—Remodelling the new Tonga road from the Brewery to Naini Tal.

This is a work of some importance, and was described in last year's report. The work has been completed except the protective works at a slip in chains 402 and 403 and some work on mile and furlong stones.

Expenditure incurred up to 31st March 1896, Rs. 76,316, and the amount required to complete the work during 1896-97, and to settle outstanding accounts will be about Rs. 23,700, making a total expenditure of Rs. 1,00,000 against the sanctioned estimate of Rs. 1,13,000.

Miscellaneous Public Improvements.

Naini Tal district.—Protective measures for the safety of the Sher-ka-Danda hill, Naini Tal.

An estimate amounting to Rs. 87,712 was sanctioned. Expenditure incurred up to 31st March 1896, Rs. 41,126. This work was well advanced. It consisted principally in lining ravines with masonry, strengthening weak places by building breast wallin, and careful attention to all questions of drainage. Funds for this work were provided by Government.

Contribution Works.

Lucknow district.—Constructing the Quinton Memorial wing in the Dufferin Hospital at Lucknow.

The work has been noticed in the last year's report. It has been completed during the year under review at a total cost of Rs 15,039 against an estimate of Rs. 14,276.

The building was constructed to perpetuate the memory of the late Mr. Quinton, C. S. I., who was killed at Manipur, and the money was contributed by the Oudh Taluquars. It consists of three wards for European and Eurasian patients, quarters for a resident nurse and suitable out-offices. The buildings, which are surrounded by an enclosure wall, are in the immediate vicinity of the Dufferin Hospital.

Lucknow district.—Special repairs to La Martinière Boys' School, Lucknew.

The following works in connection with these buildings, for which separate estimates were sanctioned, were, with the exception of item VIII, which was still in progress, completed during the year:—

		Estimate.	Cost.
		Rs.	Rs.
I-Repairs to Bath honse	***	6,355	7,109
II-Repairs to Stable and Coach house		4,943	4,762
III—Repairs to Constantia	• • •	21,550	20,575

VIII-Repairs to the roads and culverts, and im	proving d	rainage 6,293	3,521
IX-Construction of a new latrine	***	1,890	3,030
X-Repairs to the circular portion of the wir	g	44,501	39,595
XI-Re-roofing portions of, and providing iro	n gratings	to, 962	887
bath house.			

Bahraich district.—Constructing a Memorial Church at Bahraich.

This building is erected in honor of the late Col. F. Maynard, and the money was contributed by the Raja of Nanpara. The estimate was sanctioned for Rs. 6,196, and subsequently revised to Rs. 7,493. The work is approaching completion. Expenditure incurred up to 31st March 1896, Rs. 6,596.

LOCAL INCORPORATED FUNDS.

CIVIL BUILDINGS.

Medical.

Sultanpur district.—Constructing a new dispensary at Sultanpur.

The work which was noticed in the last year's report, was completed during the year under review, at a total expenditure of Rs. 15,955 against the sanctioned estimate for Rs. 16,765. The work was started in December 1894, and the building was occupied in February 1896.

Communications.

Garhwal district.—Repairing damages done to roads and bridges by the Gohna flood.

The repairs rendered necessary by the injury done by the Gohna flood, which were noticed in full detail in the last year's report, were completed during the year under review, at a total cost of Rs. 91,638, only six miles of the road which is 6 feet wide remaining to be widened. Several bridges remain, however, to be rebuilt or re-erected.

Lucknow district.—Metalling the Lucknow and Hardoi road from Kakori to Maliabad.

This work, which was noticed in the last year's report, was completed during the year at a cost of Rs. 11,683 against an estimate of Rs. 12,385. Prior to the sanction of this estimate, the road was only maintained as 1st class from Lucknow to Kakori, a distance of 8 miles. It has now been continued on to Maliabad, the headquarters of a tahsil, a further distance of 15 miles.

Lucknow district.—Raising and metalling the Lucknow and Muhammadabad road.

An estimate for this work was sanctioned in August 1894 for Rs. 14,985, and an outlay of Rs. 4,698 was incurred on it up to 31st March 1896. Raising and bridging has been completed and the collection of kunker is well in hand.

Unao district.—Metalling and raising to 1st class the Ajgain and Mohan 2nd class road.

This work is now nearly completed. Outlay incurred up to 31st March 1896, Rs. 25,314 against an estimate of Rs. 26,704.

Hardoi district.-Metalling Hardoi and Farukhabad road.

Outlay to end of March 1896, Rs. 10,744 against an estimate of Rs. 11,811. The work was practically completed with the exception of some payments for land compensation.

Hardoi district. - Raising and metalling Hardoi and Farukhabad road.

An expenditure of Rs. 3,557 had only been incurred up to 31st March 1896 against an estimate of Rs. 12,166. The work was suspended for want of funds.

Fyzabad district.—Raising and bridging the Daulatpur and Sohawal road.

An estimate for this work was sanctioned for Rs. 11,857. The amount allotted for this work was only sufficient to take up the Tillai bridge, which had only been completed. The outlay incurred on the work at the close of the year was Rs. 2,008.

Gonda district.—Construction of a screw pile bridge over the Soan river on the Gonda and Balrampur road.

Completed during the year at a cost of Rs. 23,215 against an estimate of Rs. 23,364. A sum of Rs. 1,422 has been contributed by the Raja of Balrampur for this work. The work was practically completed, except the fixing of the side struts, but the bridge was opened to traffic.

Sultanpur district.—Special repairs to the pile bridge at Amghat.

An estimate for this was sanctioned by the Commissioner for Rs. 7,085, and the work completed during the year at an outlay of Rs. 7,292. The work was started in May 1895, and notwithstanding obstacles met with in driving the piles, the special repairs were completed and the bridge opened to traffic in September 1895.

THIRD CIRCLE. IMPERIAL SERVICES. CIVIL WORES.

Орыит.

Gházipur district.—Converting the Factory Engineer's compound at Gházipur into an Abkari drying yard in the Opium Factory.

This work was put in hand in anticipation of sanction to estimate, as it was considered urgent. Practically completed at a cost of Rs. 6,868, excluding percentages on account of establishment and tools and plant.

PROVINCIAL SERVICES.

CIVIL BUILDINGS.

Administration.

Cawnpore district.—Additions and alterations to the Collector's kutcherry at

Completed at a cost of Rs. 9,779 against a sanctioned estimate of Rs. 9,322.

Ghazipur district.—Constructing a new office block in the tahsili at Muham-madabad—

An expenditure of Rs. 6,189 was incurred against an estimate amounting to Rs. 12,053.

Gházipur district.—Constructing a new tahsíli at Saidpur.

This is an unfinished work of previous year. Collection of materials was in progress when olders were received to suspend operations, and funds to the extent of Rs. 6,500 were withdrawn by Government from current year's grant of Rs. 7,000. Nothing has been done towards actual construction of the work up to date. The outlay during 1895-96 on collection of materials was Rs. 703, and the total outlay up to end of March 1896 Rs. 2,228 against an estimate of Rs. 21,929.

Gházipur district.—Constructing a new tabsíli at Zamánia.

This is also an unfinished work of previous year. Collection of materials was in progress when orders were received to suspend operations. Funds to the extent of Rs. 7,500 were withdrawn by Government from the current year's grant of Rs. 8,500. Nothing had been done towards actual construction of the work up to the end of March 1896. The outlay during the year on collection of materials was Rs. 837, and the total expenditure to end of March 1896 was Rs. 1,968 against an estimate of Rs. 26,404.

Gorakhpur district.—Constructing the Commissioner's Kutcherry at Gorakhpur.

This was completed for Rs. 34,622 against a sanctioned estimate of Rs. 28,604.

The work was completed during 1894-95, but final payment was made in 1895-96.

Law and Justice.

Benares district.—Additions and alterations to district court buildings at Benares.

This is an unfinished work of the previous year completed during the current year, with the exception of the new iron record racks. Funds to the extent of Rs. 12,500 were withdrawn by Government from the current year's grant. The outlay during the year was Rs. 7,714, and up to date Rs. 16,388 against an estimate of Rs. 30,000.

Jails

Ballia district.—Constructing a Sadar havalat at Korantadih.

An unfinished work of the previous year. The fair project amounting to Rs. 19,646, submitted for sanction in 1894-95, has been abandoned by Government, pending settlement of the question relating to the permanent location of the head-quarters of this district. An estimate, amounting to Rs. 8,037, has, however, been submitted for sanction for work urgently required to be done. Expenditure incurred during the year was Rs. 3,598 and up to date Rs. 7,936.

Pelice.

Gházipur district.—Constructing new reserve police lines at Gházipur. Completed for Rs. 19,474 against a sanctioned estimate for Rs. 19,297.

Ballia district.-Constructing new reserve police lines at Korantadih.

Rs. 11,720 were expended on this work against a sanctioned estimate for Rs. 34,077.

Contribution Works.

Ballia district.—Constructing a branch dispensary at Bansdih.

The outlay during the year was Rs. 654 against a sanctioned estimate of Rs. 2,230. Funds to the extent of Rs. 3,000 have been contributed by the Mahárání Surnomoyee.

Miscellaneous Public Improvements

Azamgarh district.—Protective works, Azamgarh City.

The city being liable to sudden inundation by the rising of the Tons river, much damage has been done to house property in past years. The last heavy flood occurred.

in 1894. On the occasion of His Honor the Lieutenant-Governor's visit to Azamgarh in November 1895, the Municipal and District Boards brought the matter to His Honor's notice, and asked that measures be adopted for protection of the town from future inundations. The work being considered urgent, it was put in hand in February 1896, in anticipation of sanction to the estimate. Work was approaching completion, about three quarters of the earthwork having been finished up to the end of March 1896.

INCORPORATED LOCAL FUNDS.

COMMUNICATIONS.

1st Class Roads.

Cawnpore district.—Raising and metalling the 2nd class road from Akbarpur to Rura.

Rupees 3,872 were expended on this work during the year, the outlay to date being Rupees 7,555 against an estimate amounting to Rs. 23,500.

About 1,300,000 cubic feet of earthwork done against estimated quantity of 1,999,208 cubic feet. First coat of metal collection in miles 1, 2, 3 and 4 completed. Collection in the 5th mile in progress. Consolidation of first coat will be done next rains.

Fatchpur district.—Raising to 1st class the existing 2nd class road from Khaga to Kishenpur.

Rupees 7,352 were expended on this work during the year. The outlay incurred up to date amounts to Rs. 20,512 against an estimate of Rs. 30,143.

Earthwork completed. Collection, miles 5 to 10 completed. Consolidation, miles 6 to 10 completed. Culverts all completed.

Banda district.—Constructing a metalled road from Attara to Naraini.

Rupees 6,191 were expended on this work against an estimate of Rs. 37,868.

This road is one of the important roads required as a feeder to the Railway Station at Attara, Indian Midland Railway, connecting it with the rising bazar at Naraini. The embankment is practically finished. Work in progress.

Hamîrpur district.-Metalling a portion of the Maudha-Muskara road.

This is a very useful bit of road. It connects the small town and tabsil of Maudha with the metalled road to Hamirpur and to Mahoba. Completed at a cost of Rs. 4,991 against a sanctioned estimate of Rs. 5,005.

Hamirpur district.—Constructing a metalled road from Mahoba to Louri (in the Chatterpur State) to the border of the district.

An expenditure of Rs. 13,674 was incurred against an estimate of Rs. 16,635.

Work in progress. Will be finished during the rains of 1896-97. This is a useful feeder road to the Indian Midland Railway, Mahoba. The metalled road to Louri, lying in the Central India Agency, has been metalled. The connection with Mahoba will be completed by the end of September 1896.

Jhánsi district.—Constructing a metalled road from Mau to Púnch.

Rupees 15,925 were expended on this work against an estimate of Rs. 1,55,921.

This road is an important railway feeder to the Indian Midland Railway at the stations of Punch and Mau Ranipur, a distance of 43 miles from each other.

Earthwork and soling has been finished on miles 1 to 6, also the collection of stone metal on these miles. The embankment from Gursarai to Punch, a length of 17 miles, has nearly been finished by famine labour.

Jalaun district .- Converting the Orai-Kunch road to 1st class.

This important road connects the station of Orai with the largest town in the district: completed at a cost of Rs. 37,950 against an estimate of Rs. 39,008.

Jalann district.—Constructing Jalann-Madhogarh road. Rs. 20,722 were expended on this work against an estimate of Rs. 49,950.

Miles 3 to 7 metalled, with the exception of the bit lying on either side of the Cheria Nala. Kankar collection partially done in miles 8 and 9.

Gorakhpur district.-Metalling Deoria and Barhaj road.

An expenditure of Rs. 17,446 was incurred against an estimate of Rs. 42,293.

Metalling of miles 1, 2 and 3 completed. Collection completed in miles 6, 7, 8, 9 and 18, and partly done in miles 4 and 5. The whole road will be finished in 1896-97 if funds are given.

Gorakhpur district.-Metalling Deoria and Padrauna road.

Work completed at a cost of Rs. 11,375 against an estimate of Rs. 11,795.

Azamgarh district.—Metalling Azamgarh and Man road.

This work was completed for Rs. 55,635 against an estimate of Rs. 56,029.

Ballia district.—Raising and bridging the road from Rasra to Mau vid Haldhar-pur.

The outlay during the year was Rs. 7,513 and up to date 17,429 against an estimate of Rs. 39,421.

Gorakhpur district.—Constructing Ganeshpur-Senduria road.

Rs. 38,453 were expended on this work against an estimate of Rs. 44,942.

Earthwork practically completed as well as some of the culverts, the remainder will be done in 1896-97 if funds are available.

Basti district.-Raising and bridging Khalilabad and Mendhawal road.

Work completed at a cost of Rs. 25,683 against an estimate of Rs. 26,073.

Bánda district.—Constructing road from Oran to Badosa.

This work was put in hand as a famine relief work by order of the Collector and an expenditure of Rs. 10,585 incurred against an estimate of Rs. 3,811, the adjustment of which will be made in due course. The road is important as it connects Oran, a small bazár, with the Badosa railway station, Indian Midland Railway.

Contribution Works.

Gorakhpur district.—Constructing 1st class road from Salempore to Majhauli.

Work completed at a cost of Rs. 55,635 against an estimate of Rs. 56,029, but compensation for land not paid yet. Steps have been taken for adjustment of the charge.

Ganges Navigation Works.

The usual operations were undertaken for maintaining a navigable channel for cargo boats and steamers over that portion of the Ganges which lies between its junctions with the Gogra and the Jumna. The minimum depth of the channel is fixed at from four to five feet. The works for this purpose carried out during the year were of the usual nature and were successful. No accidents occurred. The expenditure up to 30th June 1896 was Rs. 10,137. The season last year was an exceptionally dry one, the river during the months of April, May and June 1896 having been from two to four feet below normal. There being a smaller volume of water in the river, its velocity was less, and it was less able to shift sandbanks, so that spurs bad either to be made of a greater length than usual or else maintained for several months where it was found necessary to deepen the channel without obstructing navigation. The work of keeping the channel open was therefore more difficult and more expensive than in other years. In addition to this,

steamers have now commenced plying regularly between Calcutta and Gházipur and for some time came up to Benares. No damage was done either to steamers or boats, and a navigable channel was kept open the whole time.

Government Workshops at Roorkee.

The operations of the year have been of an ordinary nature. Work was done for Government departments and private customers of the aggregate value of Rs. 3,88,037, comprised in the following:—

						Rs.
Public Works Department	, North-Wester	n Provinces	and Oudh	, Provincial		55,117
Ditto	other Province	es, Provincia	al and Milit	ary Works	,	62,880
Ditto	North-Wester	n Province	s and Oad	llı and ot	her

P				Tota	l Profit		12,71,524	-3,68,638;

The general result of the operations of the year is a loss, after paying interest charges of Rs. 3,68,638 against a profit of Rs. 12,71,524 in the previous year. The falling off in receipts of nearly 20 lakhs is due altogether to the heavy rainfall of the winter season of 1894-95; the assessments of that season coming into the realizations of 1895-96. The working expenses are four lakhs less than in the previous year, and are lower than they have been for many years past. In accordance with the orders of Government, every endeavour was made to keep expenditure down to the lowest possible limit. Outlay on repairs was confined strictly to such works as were absolutely necessary for the maintenance of a working supply in all channels.

Total receipts, charges and interest to the end of the year.—The following shows the total receipts (realizations), charges and interest from the opening of the canals to the end of 1895-96:—

	Protective Works.	Productive Works.	Minor Works.	Total.
	Rs.	Rs.	Rs.	$\mathbf{R_8}$.
Direct and indirect receipts to end of 1895-96	6,17,086	15,18,85,756	64,74,173	15,89,77,015.
Direct and indirect revenue charges to end of 1895-96.	10,24,861	6,35,98,469	46,02,172	6,92,25,502
Net resenue	-4,07,775	8,82,87,287	18,72,001	8,97,51,513.
Interest charges to end of 1895.96	19,95,849	7,48,26,870		7,68,22,719
Net revenue deducting interest charges	-24,03,624	1,34,60,417	18,72,001	1,29,28,794

The charges incurred on the Betwa Canal from its opening to the end of the year exceed the receipts by nearly 24 lakhs; from Productive works the net revenue to the end of the year exceeds the charges, including interest, by over $134\frac{1}{2}$ lakhs; in the case of Minor works the receipts exceed the charges by nearly $18\frac{3}{4}$ lakhs.

Provincial Contract.—Under the contract entered into with the Government of India on 1st April 1892, the Provincial Government retains the direct revenue from Major Productive and Minor Irrigation works, but pays interest to the Imperial Government on the total Capital outlay from all sources on works of the former class; and also on the Capital outlay (Rs. 23,35,555) from Imperial Funds on Minor works and Navigation.

PRODUCTION AND DISTRIBUTION.

The results for the past four years are shown in the following table:—

Finanancial results of the Provincial contract.

			1892-93.	1893 94.	1894-95.	1895-96.

Surplus or	Deficit	***	+1,48,753	+3,36,341	+1,93,180	-13,94,627

The exceptionally wet weather of the winter season of 1894-95, and the consequent decrease in the area irrigated, has caused a loss to the Provinces of nearly 14 lakhs. The surpluses of the three previous years of the current contract aggregate Rs. 6,78,274; the net deficit is therefore Rs. 7,16,353.

Area irrigated and details of gross revenue assessed.—The area irrigated and details of the gross revenue assessed for the past 11 years are given in the following statement:—

					Direct rev	enve as:	sessed.

The direct revenue assessed during 1894-95 is the lowest recorded since 1879-80. In marked contrast to this, the direct assessments of the year 1895-96 exceed those of any previous year by nearly five lakes.

SECTION II .- AGRICULTURAL.

Nature of the seasons, demand for water, &c. Kharif—There were light showers in April, and the month was exceptionally cool. Throughout May, however, very strong hot west winds prevailed, and the temperature throughout the month was excessively high. The rains broke in the middle of June, and the rainfall of that month largely exceeded the normal, especially in the tracts commanded by the Upper Ganges, Eastern Jumna, and Rohilkhand Canals. There was a long break during the first three weeks of July, and the total rainfall was much below the average for the month. In August the normal amount of rain fell, and it was generally well distributed throughout the month; but on the 13th a fall of fourteen inches in thirteen hours was recorded at Jauli, in the Muzaffarnagar district. The rains ceased early in September, and after the 4th of that month practically no rain fell over the canalirrigated tract.

In Muzaffarnagar, Meerut, Farukhabad, and in the sub-montane districts the total rainfall of the season exceeded the normal; in all other canal-irrigated districts there was a deficiency.

Owing to the late spring harvest, demand for canal water did not become strong until late in April. It became very strong in May, and continued so until the rains broke. Water was again required in the middle of July, but the demand was checked by general rain between the 21st and 24th of the month. During August and for the first half of September practically no irrigation was done; but the early cessation of the rains caused a heavy demand to spring up at the end of the season, and a large area of late rice was secured, chiefly on the Lower Ganges Canal.

Rabi.—The rains ceased unusually early. There was good general rain during the first few days of September, but on the 4th of the month the rains practically ceased over the area commanded by canals. There was no rain in October and November, and during the remainder of the season only a few showers fell. The season therefore was exceptionally dry—in marked contrast to the rabi of 1894-95.

The demand for canal water commenced early in October and grew stronger as the season advanced; but, except in one or two Divisions, it never became very intense. As regards area irrigated, the results of the half-year's operations are therefore somewhat disappointing, and expectations based on the results of previous dry seasons have not been fully realized. The area sown with rabi crops, especially barley, was smaller than usual; and the area requiring canal water was still further reduced by the intense heat at the beginning of November, which baked the soil and burnt up the young crops before they were sufficiently advanced to stand a first watering. In some cases the fields were resown with the aid of canal water, but in many instances the time for resowing had passed. So great was the reduction in area under rabi crops that bût little difficulty was experienced throughout the season in meeting the demand for canal water.

It may be thought that the recent enhancements of the rates for "flow" irrigation on the Upper Ganges and Eastern Jumna Canals, and in the older branches of the Lower Ganges Canal had some effect on the demand for canal water. But if this were so, the proportion of area irrigated "flow," compared with that irrigated "lift," should show a marked decrease on these canals. This is not the case—the proportion on each canal remains much the same as it was before the enhancement of the "flow" rates.

Area irrigated by canals.—The following statement shows the areas irrigated during the last 11 years:—

Year,	Ganges Canal.	Lower Ganges Canal,	Agru Canal.	Eastern Jumna Caual.	Botwa Caual.	Dán Canals.	Rolilkhand Canals.	Bijnor Canals.		Hamfrhur.	Total.
	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	Acres.	∆cres.	Acres.

The decrease in indigo is ascribed partly to a falling off in prices and partly to deterioration of seed in the previous wet winter. The areas under wheat, gram and other food grains are exceptionally large; and under the influence of better prices there is a considerable increase in the area under poppy.

For all the principal crops the outturn of the year was somewhat below that of a full average crop.

In the Meerut and Muzaffarnagar districts the yield of sugarcane was much below the average. The damp of the previous winter had injured the seed, and during the rains the crop in places suffered severely from floods.

Good prices were obtained for all crops, but especially for cotton and indigo and food grains.

SECTION III. - NAVIGATION.

Revenue and Expenditure.—The gross revenue (realizations) and expenditure during the past two years were as follows:—

					1894.95.	1895-96.
Re	renue.				I	
Upper and Lower Ganges Canal Agra Canal,		•••	*11:	·••	Rs. 12,851 7,084	Rs. 11,930 5,654
Exp	enditu ro.		Receipts	•,	19,935	17,584
Upper and Lower Ganges Canal Agra Canal	***	***	***	***	12,119 10,575	12,071 6,792
	7	Total Expe	enditure		22,694	18,863
Excess of expenditure over receip	ts	***	***		2,759	1,279

There is again a satisfactory decrease in expenditure. The falling off in receipts is due chiefly to the fact that tolls are no longer assessed on Government boats plying on Government work.

Traffic Statistics .. - Some details of traffic are given in the following statement :-

]	1894-90		1950-20-			
		Upper and Lower Ganges Canals.	Agra Canal.	Total.	Upper and Lower Ganges Canals.	Agra Canal.	Total.

SECTION IV .- PROGRESS OF WORKS.

Direct outlay of the year compared with grants.—In the following statement the total outlay of the year under the several service sub-heads included in the Budget Estimate of the Irrigation Branch is compared with the original and final grants of the year:—

Hend of service.	Outlay.	Budget grant.		
freat of service.	Odday.	Original.	Final.	
Imperial.	Rs.	Rs.	Rs.	
Protective works (Account head 35) Major works—Working expenses (Account head 42) Ditto of which the Capital outlay is not charged against Revenue (Account head 43).	7,334 87,462 12,57,178	8,000 96,000 12,10,000	8,000 90,000 12,50,000	
Total Imperial	13,51,974	13,14,000	18,54,000	
Provincial.				
Major works—Working expenses (Account head 42) Minor works (Account head 43), Capital account Ditto working expenses Ditto works of which neither capital nor revenue accounts are kept.	20,15,158 11,923 1,45,620 57 369	23,42,000 49,000 1,58,000 1,08,000	20,89,000 19,520 1,52,046 74 440	
Total Provincial	22,30,070	26,57,000	23,85,000	
GRAND TOTAL	35,82,044	39,71,000	36,89,000	

Under "Provincial" the outlay is much below the final grant for the year. With orders to reduce expenditure to a minimum, it was difficult to estimate the probable expenditure with any exactness.

Capital outlay on works.—The Capital outlay on "Works" shown in the above table was distributed as below:—

Class.	Work.	Head works.	Main canal and branches	Distri- butaries	Drainage works.	Total.
Major Works. Protective works (Account head 35). Works of which the Capital outlay is not charged against Revenue (Account head 49).	Betwa Canal Ganges Canal Lower Ganges Canal Agra Canal Eastern Jumna Canal Fatchpur Branch, Lower Ganges Canal. •	GRAND TOTAL	1,52,791	3,23,224	1,79,259	2,01,500	8,56,774

Betwa Canal.—On the Betwa Canal the outlay was incurred on pitching the slopes of Main canal, miles II-7 to III-3; on widening the Umri minor; and on completing the Ziladár's office at Jalann.

Ganges Canal.—On the Ganges Canal the total outlay on works amounted to Rs. 2,17,902.

Northern Division.—Outlay Rs. 88,652. The following works were completed:—Motichur spur; extending the right flank, Hardwar dam; Motichur diversion channel; protective works on the Pathri and Ranipur torrents. Good progress was made on the Pur and Muzaffarnagar drainage cuts, and a commencement effected on the Harsauli drain. As explained in last year's report, the estimate for a new lock and regulator at the head of the canal was closed; serviceable materials, valued at Rs 39,813, being written back to stock.

Anápshahr Division.—Outlay Rs. 12,469. The Raidbana drainage cut was practically completed, and the important work of improving the channel of the Nim nadi was commenced.

Meerut Division.—Outlay Rs 11,994. The new fall in the Jani escape was commenced, and progress made on the improvements of the Nagan nadi, Sardhana drain and Kadirabad drain.

Bulandshahr Division.—Outlay Rs. 87,914. No less than 46 estimates were current in this Division. A new flour mill at Sanauta was commenced, finished, and set running; several miles of new minors and drains were completed, and important improvements were effected on the Dasna and Barál arterial drains. A good start was made on the Khurja diversion cut. On the old distributaries considerable advance was made in equipping them with discharge sites, masonry outlets, and bed-bars.

Alignth Division.—Ontlay Rs. 16,396. The Borah and Kotla minors were got ready for the rabi, and a considerable area of new irrigation was effected from these channels.

Lower Ganges Conal (including the new Fatchpur Branch).—The outlay of Rs. 207,193 against the Open Capital account of the canal was incurred chiefly on the extension of the Ghátampur distributary; on a lock below the head of the new Fatchpur Branch; on permanent river training works in connection with the Narora weir; on constructing new drainage and minor distributary channels, and on improving existing distributaries. In addition to the above, an expenditure on works of Rs. 1,73,450 was incurred against the general estimate for constructing the Fatchpur Branch.

Narora Dirision.—Outlay Rs. 51,524, of which Rs. 25,047 were spent on permanent river training works above Narora weir. During the year the headquarters of the Division were transferred from Narora to Aligarh, where a house was purchased as a combined office and residence for the Executive Engineer. The Mohanpur distributary was completed, and the Mohanpur drain nearly so. In the matter of the Rudain drain, referred to in last year's report, the Consulting Engineer to the Government of India for State Railways ruled that the reconstruction of the railway culvert through which the drain passes should be carried out at the expense of the railway.

Mainpuri Division.—Outlay Rs. 16,133. The raising and strengthening of the main canal banks have steadily progressed; work on all important reaches has now been completed, and the canal rendered perfectly safe. The following works were completed: Ziladár's office on the Bewar branch; construction of new outlets on the Nagaria distributary; constructing the Mahaut minor and extending the Banakia distributary. For the last, land charges remain to be adjusted. Under drainage cuts—a drainage inlet at Jera; the Bhagwantpur drain, and the Sarabpur drain were completed. Land charges for the last still have to be adjusted. The excavation of the Balua drain was held in abeyance as Provincial funds were not obtainable.

Campore Division.—Outlay Rs. 18,668 incurred in completing a 2nd class inspection-house at Halkapur and two Ziladár's offices; also in completing the Saraya and Lakh drainage cuts. In the case of the last, land charges remain to be adjusted. Progress was also made and an expenditure of Rs. 13,452 incurred on the remodelling of the Right Ranjitpur distributary.

Etáwah Division.—Outlay Rs. 35,073. Of this Rs. 28,323 were spent on constructing new bridges and masonry outlets on distributary channels: the expenditure on these improvements is now drawing to a close. The Takha escape from the Gangsi distributary was completed. Under Drainage Works, good progress was made on the Ber and Bhadwan drain, and the following were completed: Kothipur, Balapur, and Sehwan; Dohin, Chandkora and Bharthna drains.

The estimate (Rs. 4,26,230) sanctioned by the Government of India for extending the Ghátampur distributary of the Etáwah Division has been dealt with by the newly-constituted Fatehpur Construction Division noted on below.

Bhognipur Division.—Outlay Rs. 13,295. The following works were practically completed:—Lakhna inspection-house, Mahewa Ziladár's office, the Takpura drain, and the Patsoi drain. The Akorhi inspection-house and the Akbarpur drainage cut were commenced, and the Amarpur minor is well in hand. A large share of the small Capital grant in this Division was allowed to lapse.

Falehpur Division .- The estimate for extending the Campore branch of the Lower Ganges Canal through the district of Fatchpur into the south-eastern corner of the Allahabad district received the sanction of the Secretary of State in January 1893 (Despatch No. 2, dated 25th January 1893). The estimate amounts to Rs. 37,25,000, of which Rs 34,20,000 are for direct, and Rs. 3,05,000 for indirect, charges. The branch will, it is estimated, irrigate annually 116,000 acres and yield a net annual revenue of Rs. 3,04,500 or 8:17 per cent. on the Capital cost. The grant of Rs. 3,50,000 in the budget for 1895-96 enabled the work to be put in hand at the beginning of year. A new division known as the Fatchpur Division was constituted for the construction of this work and of the Ghátampur distributary extension, the estimate for which, amounting to Rs. 4,26,230, was sanctioned by the Government of India in October 1894. The outlay for the year in this division on works amounts to Rs. 2,45,219, of which Rs. 1,73,450 were spent on the Fatchpur branch; Rs. 38,362 on the Ghátampur distributary extension; and Rs. 33,407 on works on the Cawapore navigation, rendered necessary by the construction of the new branch. Expenditure on these works, and on the Ghátampur distributary, is chargeable against the Open Capital account of the Lower Ganges Canal.

On the Fatchpur Branch.—The progress of work was as follows:—

- (a) Head works.—Lock and Byewash, Cawnpore Branch—masonry completed; lock gates and fittings awaited.
- (b) Head regulator.—Masonry completed.
- (c) Gujeni Escape.—Head completed to canal bed level; excavation of falls started
- (d) Regulating bridge at mile 0-1 practically completed.
- (e) Pandu aqueduct.—Excavation of foundations in progress, foundation proving dry and good.
- (f) Culvert over Ramaipur nala completed.
- (g) Two 1st class road bridges and 15 district and village road bridges practically completed.
- (h) Two inspection-houses approaching completion.
- (i) Earthwork in first 55 miles of channel commenced, of which 28 miles approaching completion.

(k) Channel alignment completed to mile 80. Distributary surveys of all systems down to mile 77 in progress, much of the alignment completed and lock-spitted.

On the Ghátampur extension.—The main channel was aligned and lock-spitted to mile 47; the Paras and Bhadwara distributaries were also lined out. The channel was completed to mile 38 with masonry works, excepting foot bridges and aqueduct The alignment of the remaining main and distributary systems is in progress.

Agra Canal.—Outlay Rs. 96,085 incurred on the new lock and regulator at mile 31, on a stop-dam at mile 38-3; on the Western depression, Tilpat, and Chhota Kosi drainage systems, and on a number of minor works.

Eastern Jumna Ganal.—The outlay of Rs. 1,46,024 was incurred chiefly on work in connection with the Naogaon dam, and on drainage works.

Upper Division.—Outlay Rs. 98,024. The new retaining weir below the Naogaon dam was completed by June 1895, in time for the floods. The waterway of the existing dam having proved insufficient, it was decided, in October 1895, to increase the length of crest by 50 per cent. The sanction of the Government of India was accorded to the estimate (Rs. 46,223) for this work. The work was practically completed by the end of March 1896. The Landhaura drain was completed in time for the rains.

Lower Division.—Outlay Rs. 48,000. A new regulator and new heads for the Bijwara and Ramala distributaries were put in hand and completed. Good progress was made on the Basi, and Lumb drains and on the diversion of the Kandla drain. The widening of the Baraut drain was completed.

Dún Canals.—Outlay Rs. 7,068 incurred on lining with masonry the Badripur branch of the Kalanga canal, and on constructing an escape and drain in connection with this canal.

Extensions and improvements.—The expenditure under this sub-head was as follows:—

	Betwa Cana		••	•••		•••	Rs. 2,539
	Ganges Lower Gang Agra Eastern Jum		••	•••	***	•••	39,669
Productive	Lower Gang	es .	••	•••	***	***	53,019
WOLKS.	Agra	•••	••	•••	•••		2,699
	Lastern Jum	ina.	••	•••	•••	***	16,005
					Total	•••	1,11,892
Minor works	Důn .			•••	***	•••	779
Minor works	Nonnkhand .	••	••	•••	•••		5,081
	Dillior		·• .	•••	***		386
t	Transi Lakes	• •	••	•••	***	•••	342
	- Tamirpur ,	•	••	•••	•••	***	***
					Total		C,588
			(GRAND	TOTAL	•••	1,20,519

The expenditure is nearly Rs. 60,000 less than last year. Owing to lack of funds but few new works were started during the year.

Ganges Canal, Northern Division.—Outlay Rs. 11,716. Incurred chiefly on works of protection for the Pathri superpassage; providing additional gates to the Myapur regulator; and on alteration to the Myapur dam.

Anúpshahr Division.—Outlay Rs. 1,462 on miscellaneous works.

Meerut Division.—Outlay Rs. 5,268. The widening of the Sardhana drain was completed.

Bulandshahr Division.—Outlay Rs. 17,081. Estimates for over 70 works of extension and improvement, chiefly in connection with drainage and distributary channels, were open during the year, but owing to tightness of funds a number of these works had to be postponed.

Aligarh Division.—Outlay Rs. 4,719, incurred chiefly on remodelling the Pil-khatra distributary and on the construction of the Gangaoli drainage cut and inlet. Both of these works were practically completed.

Lower Ganges Canal, Narora Division.—Outlay Rs. 41,732, incurred in connection with the head works at Narora, chiefly in remodelling the noses of the rivertraining groynes to the new or Denehy pattern with a view to reducing the cost of annual repairs.

In all other divisions of this canal owing to want of funds the expenditure has been small.

Agra Canal.—Outlay Rs. 2,699, incurred on petty works.

Eastern Jumna Canal, Upper Division.—Outlay Rs. 13,655. The down-stream floor of the retaining weir below the Maskhara dam was protected by laying six lines of concrete blocks. The masonry revetment at the Naogaon dam, through which the torrent breached in 1880, was rebuilt. Three lines of concrete blocks were added below the downstream floor, and heavy boulder pitching laid on the flanks of the old retaining dam.

Lower Division .- Outlay Rs. 2,350, incurred on petty works.

Repairs and maintenance.—The following table shows the expenditure on repairs and maintenance during the year:—

			Expenditure	on repairs.
Class of works.	Canal.	1894-95.	1895-96.	
Protective works	Betwa	•••	Rs. 30,202	Rs. 29,698
Productive	Lower Do Agra		3,93,130 2,93,192 94,397 1,30,674	3,43,729 2,44,586 72,819 91,593
Minor	Robilkhand Bijnor	77. II. 71. 31. 11. 41.	21,900 23,393 2,457 3,693	19,181 19,987 2,101 3,035
Agricultural works for which neither Capital nor Revenue accounts are kept.	Lower Ganges Eastern Jumna Betwa Dún	•• ••	9,008 6,211 2,267 746	9,499 7,205 1,457 15 671
	Tota		10,11,270	8,45,476

The total expenditure under this head is Rs. 1,65,794 less than in the previous year, a decrease of over 16 per cent. The orders to reduce the expenditure to the lowest possible limits were carried out with results which, so far as the expenditure of the year is concerned, are disclosed by these figures. But such a large curtailment of expenditure on the repairs and maintenance of Irrigation Works cannot be made without reducing the efficiency of the works and interfering with the proper distribution of the water. In the interests of the Canals and of the cultivators dependent on them, it is to be hoped that the conditions which rendered necessary such a large reduction in the amount available for annual repairs will not recur for many years to come.

Minor Works, neither Capital nor Revenue.—The following statement shows the outlay for each canal under "new works" on minor (agricultural) works of which neither capital nor revenue accounts are kept:—

				(Outlay.
					Rs.
Ganges Canal	 •••	***	***		15,263
Lower Ganges Canal	 •••	***	• • • •		11,579
Agra Canal	 	• • • •	•••		
Eastern Jumna Canal	 •••	•••	•••	433	685
			Total	***	27,527

The expenditure is about half that of the previous year, as but few new works were put in hand.

Gunges Canal, Northern Division.—Outlay Rs. 5,077, incurred on a new drain in the Solani khádir; on diverting the Dhandera drain, and on remodelling the Muzaffarnagar drain, half the cost of which is debited to this head.

Anapshahr Division.—Outlay Rs. 5,222 on the Raidhana and Kithor drains and and on the improvement of the Nim nadi.

Meerut Division.—Outlay Rs. 1,068, all on the Nagan nadi improvement, one-fourth of the cost of the works being debited to this head.

Bulandshahr Division.—Outlay Rs. 1,705, chiefly on the Somna, Nahraula and Chandhana cuts, half the cost of which is debited to this head.

Aligarh Division.—Outlay Rs. 2,164. The Agsoli drain and the Akrabad drain extension were completed.

Lower Ganges Canal.—Outlay Rs. 11,579, all on drainage works, the cost of which is charged partly against Capital and partly against this head.

Contribution Works.—Under this head the outlay was Rs. 14,311, and was incurred chiefly in the Northern Division on works for the protection of the town of Kankhal from the encroachment of the Ganges river, and on constructing an incinerator for the Hardwar Municipality.

Mileage of channels.—One hundred and eighty-one miles of new channels were opened during the year: of these one hundred and twenty miles are drainage cuts.

The total mileage of channels completed at the end of the year was as follows:---

						Miles.
Main Canals and	Branches	•••	•••	***	***	1,403
Distributaries	***	***	***	***	***	6,942
Drainage cuts		•••	284		•••	2,638
Navigation, escape and mill channels			8.20	***	***	258
				Total	111	11,241

(d)-Telegraphs.

The following statement shows the mileage of telegraph lines and of wires in the North-Western Provinces and Oudh at the end of 1895-96, and the extensions made during the year:—

<u> </u>	Mileage of wires.

[#] Hodal and Palwal transferred to Panjáb account and Rewal and Sutna to Central India agency account.

† Thirty-seven Bengal and North-Western Railway offices transferred to railway management.

Post Office.

(a) Imperial Post.

The year was one of steady progress in all branches. The progress was most noticeable in the money-order branch, the increase in the value of money-orders paid being represented by the enormous sum of 46 lakhs. Uninterrupted progress took place in the Land Revenue money-order system. Beginning with 1886-87, when there were 57,888 money-orders, aggregating nearly 11 lakhs, the business has steadily risen during the 10 years that have since clapsed to 165,829 money-orders, aggregating in the year 1895-96 more than 37½ lakhs in value. Similar advance marks the history of the Miscellaneous Revenue money-order system. The working of these two systems during the past year resulted in a credit to Government of over Rs. 53,000 in commission. On the other hand, the rent money-order system has declined during the past two years; but so long as landlords regard this system with disfavour, there is no likelihood of any development taking place.

The most important measure carried out during the year was the extension of the local money-order audit system to all the districts of the United Provinces. There were during the year under review 327,972 money-orders representing Rs. 41,90,388 locally audited.

A scheme for the sale of quinine through the agency of the sub and branch postoffices in all the districts of the Mecrut Division, the district of Pilibhít, and the Tárai
parganas of Kichha, Kilpuri, and Káshipur in the Naini Tal district was introduced
on the lines of the arrangement already working in Bengal: as the packets of quinine
were not distributed to the selected post-offices till towards the close of the year, it is
not possible to say whether the scheme proved a success. An experiment was also
made in the Benares and Kumaun Divisions of obtaining on every money-order drawn in
favour of natives of the lower classes the impression of the inside of the end joint of the
left thumb of the payee, in addition to the signature or mark required by the rules.
The experiment had also been tried in the previous year in the Agra, Allahabad,
Cawnpore, and Lucknow head offices. Particular instructions were issued to the Divisional Superintendents concerned to put the scheme to a practical test at the first
opportunity.

The following statement shows the number of post-offices of all classes and of letter-boxes which existed at the beginning and close of the year 1895-96 and the postmen and village postmen employed:—

Particulors-	Post-offices.	Letter-boxes.	Postmen.	Village post- men.	Total.	
Existing on 31st March 1895 Opened or entertained in 1895-96 Closed or discontinued in 1895-96 Balance on 31st March 1896 Increase or decrease	1,283	2,133	1,606	532	5,554	
	63	197	14	62	336	
	9	50	16	3	78	
	1,337	2,280	1,604	591	5,812	
	+ 54	+147	-2	+ 59	+ 258	

The entire strength of the delivery staff, including the district staff, was one man for every 15,644 of the population.

The following statement shows the distance over which mails were conveyed by railway, mail carts, and runners as compared with the mileage under each of these heads for the previous year:—

Railway	Railways		carts.	Run	ners.	Total.		
1894-95.	1895-96.	1894-95.	(1895-96.	1894-95.	1895-96.	1894-95.	1895-96.	
3,017	2,988	6971	719 2	2,0917	2,0601	5,806 <u>1</u>	5,768-	

The decrease of 29 miles of railway was nominal, being due to a transfer to another circle.

Village delivery work shows the following result as compared with the previous year:—

					1894-95.	1895-96.
Number of articles issued for delivery	***	***		ا .و.	53,329,146	54,853,786
Ditto returned undelivered	•••	•••	***		101,6,548	11,650,34
Ditto actually delivered	***	•••	•••		52,312,598	53,688,752
Percentage of undelivered articles		•••	***		1.906	2:123

The total number of articles given out for delivery during the year 1895-96 was nearly 55 millions as against 53½ millions in the previous year, the difference being an increase of about 1½ millions or 2.85 per cent. in the year under review. The number of articles undelivered was 1,165,034 or 2.12 per cent. as against 1,016,548 or 1.90 per cent. in the previous year.

The number of insured articles sent through the post as compared with those of the previous year was as under:—

					1894-95.	1895-96.
Number of articles	***	499	144	944	 25,620	26,344
Amount of insurance fee	•••	***	104	104	 Rs. 15,686	Rs. 16,097

The money-order transactions of the post-office in these Provinces during 1895-96 are compared with those of the previous year in the following statement:—

			Isaues.	Payments.			
Year.		Number of money-orders.	Value.	Commission charged.	Number of money-orders.	Value.

The number of British postal orders of all classes was 9,357, aggregating in Indian currency Rs. 1,05,926, and the commission realized amounted to Rs. 564.

The savings banks transactions of the post-office compare as follows with those of the preceding year:—

	Number of secounts.		Deposits.		Withdrawals.		Balance at eredit	
Year.		Opened.	Closed.	Number.	Amount.	Number.	Amount.	of depositors.
					Rs.		Rs.	Rø.

The total number of complaints received during the year under review was 771 against 346 in the previous year, but including those reported by Divisional Superintendents and 1st class Postmasters amounted to 1,352: of these 530 were groundless, and of the 822 remaining, 560 were well-grounded. In 132 the inquiries were unsuccessful and in 130 the inquiries were still in progress at the close of the year. Compared with the number of articles, nearly 55 millions given out for delivery, the number of complaints, excluding those which proved to be groundless, was far from excessive.

The number of cases proved against postal servants guilty of offences punishable by law in the year under review was 61 compared with 57 in the previous year. The legal convictions were 31 against 30 in the previous year.

There were seven cases of highway robbery. Of these six occurred in British territory and one in the Gwalior state, as against seven in British territory only in the previous year.

Four hundred and twenty-five articles containing valuable property, amounting to Rs. 25,989, were received in the Dead Letter Office during the year under review; and the Dead Letter Office was successful in delivering to the addressees and to the senders property to the value of Rs. 25,411. The balance was in deposit at the close of the year.

(b) District Post.

The subjoined table shows the total number of post-offices and letter-boxes which existed and of village postmen employed at the commencement and close of the year 1895-96:—

•			District post-offices.	Letter-boxes.	Postmen.	Village postmen.	Total.
	Existing on 31st March 1895	414	354	736	50	714	1,854
	Opened or entertained in 1895-96		5	45	***	17	67
	Closed or discontinued in 1895-96		53	23	er 1	55	131
•	Balance on the 31st March 1896	,	306	758	50	676	1,790
	Increase or decrease		-48	+ 22	•••	-38	-64

Five district post-offices were opened during the year, and fifty-three were closed or transferred to the Imperial establishment. Forty-five letter boxes were set up in new localities or transferred to the district post from the Imperial establishment, and twenty-three letter-boxes were closed or transferred from the District Post to the Imperial Department.

The total length of district post lines in the North-Western Provinces and Oudh during the year was 9,1914 miles, against 9,1654 miles during the previous year.

The subjoined statement shows in abstract the total number of articles posted at and delivered from district post-offices during the year 1895-96 and the previous year:—

Year	Artioles reco	eived from d spatch by in offices.	istrict post- aperial post-	Articles sent from imperial post- offices for delivery by district post- offices.

Percentage of	decrease	•••	1.6					

The total number of articles received for delivery and posted for despatch during the past two years was as follows:—

Received for delivery 1894-95. 1895-96.
Posted for despatch 2,559,200 2,544,120

The above shows an increase of 2.8 per cent. in the number of articles received for delivery as compared with the figures for 1894-95 and a decrease of 0.5 per cent. in the number of those posted for despatch.

The total number of articles returned undelivered during the year was 207,378 or 5.3 per cent. on the total number received for delivery.

The total cost of maintenance of the district post in the United Provinces was Rs. 1,87,239.

Rs.

North-Western Provinces 1,46,630
Ondh 40,609
The budget allot ment for the year was Rs. 1,89,000.

CHAPTER V.

REVENUE AND FINANCE.

A.—Imperial Revenue and Finance.

1.-LAND REVENUE, NORTH-WESTERN PROVINCES AND OUDH.

The year was remarkable for wet and cloudy weather. The monsoon of 1894, which began in June, was fairly continuous until the beginning of September but in July the rainfall was unevenly distributed, and in the autumn it was heavy and prolonged, while during the winter months it was generally in excess. The average ruinfall over the entire provinces was 65.4 inches, or 20 inches above the average of the past five years. This incessant rain caused serious injury to the autumn harvests generally, and the cutturn in the greater part of the provinces was exceptionally poor. Rice and sugarcane gave a fair yield; but the sowings of the spring crops were retarded by the excessive moisture; in many cases they had to be repeated; and finally rust, blight, and high winds shrivelled the grain when ripening, and reduced the produce. With the exception of the Meerut and Agra divisions, where the outturn on the whole was not unsatisfactory, the year must be regarded as one of bad harvests and agricultural depression—a fact of great significance in estimating the effect on the agricultural population of the unseasonable character of the current year. The poorer classes suffered most, and distress would have been actually felt, but for large importations of grain from the western districts and the Panjáb.

In many districts serious injury was caused by floods to crops and both private and Government property, and relief had to be afforded by remissions and suspensions of revenue. Severe hailstorms, moreover, occurred in nine districts, and their effect was most marked in Hamírpur and Lalitpur. In the former district the loss of revenue amounted to Rs. 35,492; while in Lalitpur, in addition to revenue being remitted, relief works had to be undertaken in the vicinity of the injured villages.

Although the excessive rainfall of 1894 and the deficient harvests were detrimental to public health, especially in the eastern and southern districts, still on the whole the year was less unhealthy than its predecessor. There was a diminution in the mortality from cholera, small-pox, and fever. It is hoped that the measures taken for the sale of quinine in five-grain packets may result in reducing the heavy mortality from malarial fever. It will be interesting to learn to what extent those measures have been carried into effect, how far quinine has been brought within the reach of the mass of the population, and whether the boon is appreciated by them.

While in these provinces generally the mortality among cattle was less than in the previous year, still it was very great. Rinderpest, foot and mouth disease, and dysentery were rife, and a few cases of glanders and farcy were reported among horses on the Saháranpur-Dehra road. The loss of cattle was greatest in the three northern districts of the Lucknow Division, especially in Sitapur, where over 1,00,000 cattle are said to have perished. The aid of the Veterinary Assistants attached to District Boards was enlisted in some districts, and steps taken for the segregation of diseased cattle and the destruction of the carcasses and skins of dead animals; but the people are said to be generally apathetic in this matter, although they do not object to the treatment of their sick animals if medicines are supplied gratis. Liberal advances were made in districts where the loss of cattle was heaviest, to enable cultivators to replace their stock.

Owing to deficient harvests, the prices of food grains were high as compared with the previous year. But for the large importations of food grains and seeds from the Panjab and the Meerut and Agra divisions into districts where the local produce

was insufficient, prices would have been exceptionally high, and in parts of the country would no doubt have reached famine level.

Of the arrears of previous years on account of land revenue on the roll, amounting to Rs. 2,37,837, no less than Rs. 1,65,586 were remitted. The real balance is shown as Rs. 70,039, of which Rs. 62,290 were collected during the year and Rs. 62 shortly after its close, leaving a sum of Rs. 7,687 for future realization. The greater part of this balance is said to be due from estates under attachment where bad seasons have interfered with the collections, or from properties in which farm or sale has been proposed.

The collection of arrears under other heads of revenue calls for no remarks.

The current demand of revenue on the roll amounted to Rs. 5,98,48,332, of which Rs. 5,89,26,331 or 98 5 per cent was collected. Of the balance, Rs. 6,14,991 is classed as recoverable, Rs. 1,91,938 as irrecoverable, and Rs. 1,08,767 as nominal. Rs. 1,74,486 of the recoverable balance was collected shortly after the close of the year, and the greater part of the money outstanding (Rs. 3,76,450) represents revenue suspended or postponed on account of the unfavourable seasons. The irrecoverable balance consists of remissions on account of destruction of crops by rust, hail, and floods. The largest remissions were granted in the Bundelkhand districts, where the linseed and wheat crops had failed, and severe damage was caused by a hailstorm in Hamírpur. The nominal balance is made up of reductions and remissions of revenue on account of deterioration and other causes. The recoverable arrears are heavy in the Rohilkhand, Allahabad, Lucknow, and Fyzabad divisions; but the circumstances of the year required that consideration should be shown in the collection of the revenue, and time allowed for payment to the poorer landholders. Discrimination was generally exercised in realizing the Government demand and no undue severity was employed. The results are oreditable to the District Officers concerned, who discharged their duties well in an exceptionally difficult year. The deteriorated tracts in Farukhabad, Mainpuri, and Etah which suffered from agricultural depression, and in which it was necessary to make large reductions of revenue, are recovering. The wire fence erected on the boundary between Muttra and Agra and the Bhartpur State has proved successful in keeping out wild cattle, and it has been found possible to enhance the revenue in some of the border villages adjoining the fence in the Agra district by 23 per cent. A noticeable feature in the year's administration was the falling off in the advance collections by nearly 21 lakhs as compared with the previous year.

On 1st October 1894 the land revenue on the roll was Rs. 5,98,48,332; on 1st October 1895 it amounted to Rs. 6,03,07,924, being an increase of Rs. 4,59,592, due chiefly to the enhancement of revenue at the regular revision of settlement in portion of Garhwal, Unao, Rae Bareli, Sultanpur, Partabgarh, and Bara Banki.

The unusually heavy rainfall during the winter months affected the canal revenues to a very large extent.

In occupier's rate alone there was a decrease of over 18 lakhs; the demand being Rs. 32,49,360 as compared with Rs. 50,95,938 in the previous year. The owner's rate was similarly affected, and the demand fell from Rs. 2,59,494 in 1893-94 to Rs. 1,52,726 in the year under review.

In State properties the total demand, including outstandings, was Rs. 7,58,048, of which Rs. 7,10,215 or 94 per cent. were collected. But a large falling off was observable in the current rental demand of the estates in the Naini Tal district, which was due to successive bad seasons and to heavy mortality among cattle. In the Tarái estate alone there was a decline in the rent-roll to the extent of Rs. 22,260. The Bánda estates were again responsible for the heavy arrears, but little more than half the total demand having been collected. Measures were undertaken for having these arrears carefully classified and tested; but it appeared that a very great proportion of them would have to be written off, as, owing to a succession of bad harvests and the

existing agricultural distress in Bánda, the chances of recovery were small. The outstanding balances in Jhánsi, Lucknow, and Hardoi were also large and were said to be the result of bad harvests. In the Garhwál-Bhábar the revision of rents was not completed in time, and the total rental and cesses remained uncollected. After payment of land revenue and rates, the income from State properties was Rs. 5,34,143; the total expenditure amounted to Rs. 3,24,869, leaving a net profit for Government of Rs. 2,09,274.

The system of remitting revenue by money-orders maintained its popularity. The total number of money-orders issued was 154,699 and their value Rs. 33,45,331, as compared with 150,303 and Rs. 32,78,485, respectively, in the previous year. The largest increases both in number and value occurred in the Saháranpur, Muzaffarnagar, Mecrut, Cawnpore, Hamírpur, and Gorakhpur districts. In contrast to the general increase in the use of money-orders for this purpose, it is not easy to account for the falling off in this respect in the Agrá and Benares divisions, in each of which, however, it was confined to some only of the districts contained in them; the number and amount of the money-orders having increased in others.

There was in the North-Western Provinces an increase of 15,013 in the number of suits instituted, but the number of applications fell from 176,754 to 145,094. The total of suits and applications has, however, decreased from 271,592 to 254,945; the figures for the year 1892-93 being 255,765. The number of suits (109,851) in the year under review was the highest on record since the Rent Act (XII of 1881) was passed. Suits for arrears of rent rose from 85,257 to 99,246 and were 90 per cent. of the total number of suits instituted as compared with 89.8 and 89.7 per cent. of the two previous years. All divisions save Gorakhpur showed an increase for which various reasons were assigned. The explanation suggested for the increase in suits coupled with a decrease in applications is that in a year of indifferent harvest the landholders take the opportunity of securing decrees for arrears of rent against occupancy-tenants, with a view to their ejectment; while they cannot afford to eject the tenant-at-will. The phenomenon of an increase in suits (7.22 per cent.) accompanied by a decrease in applications (2.55 per cent.) occurred also in 1886-87; while the reverse was the case in 1893-94, when suits fell by 0.39 per cent. and applications rose by 4.94 per cent. There would seem then to be some ground for accepting this explanation. At the same time there have been instances in which, an increase in suits was contemporaneous with an increase in applications as in 1884-85, and also in which both classes of proceedings decreased together as in 1885-86 and again in 1890-91. The file of cases which were pending for more than three months, which had diminished in the preceding year to \$4 cases, has now risen to 184. The numbers were highest in the Meerut (67) and Gorakhpur (51) districts, and the attention of the Collectors was invited to the matter.

There was a marked decrease in the number of applications to eject tenants-at-will, the figures being 53;955 as compared with 72,105 in the previous year. The Board of Revenue made the following remarks in explanation of this decrease:—

"These figures afford a strong indication of the correctness of the explanation which has been advanced before, and which many officers again advance in their present reports,—that notices of ejectment against tenants-at-will are less numerous when the seasons are unprosperous, differing in this respect from notices of ejectment against tenants with rights. Briefly put, in poor years the difficulty landholders find is not in ousting tenants, but in retaining them. The fact that in the Mecrut and Agra divisions, where the harvests were comparatively favourable, the fulling off in the issue of notices of this kind was proportionately less than elsewhere, presents a further confirmation of this view. In Hamírpur, Allahabad, Mirzapur, and Gorakhpur the number of applications of this class was less than half of that in 1893-94, and in Budaun, Moradabad, Fatehpur, Bánda, Benares, Gházipur, Ballia, and Azamgarh also the decrease was proportionately very great In the Bundelkhand districts the effects of the unfavourable seasons in discouraging evictions are accentuated by the fact that land is plentiful and cultivators few, and ejectments are only resorted to in the case of thriftless and persistently recusant tenants. In

the Benares division the fact that twelve years have now elapsed from the revision of records is given as a reason in several districts for a falling off in the number of notices. The Collector of Mirzapur is silent as to the very pronounced decrease in his district, where the notices issued were less than a third of those in the preceding year."

The tenants contested 28 per cent. of the notices, as in the preceding year. The area affected fell from 477,996 in 1893-94 to 260,555 acres in the year of report. The Benares and Gorakhpur divisions are remarkable for the large proportion of contested applications. The proportion of success obtained by the tenants in resisting ejectment (in 52 per cent of the applications) fell slightly below that of the preceding year (55 per cent). Gorakhpur, and next to it Rohilkhand, show a large number of attempted ejectments successfully defeated.

The number of applications to enhance the rent of occupancy-tenants was less by 1,731 than in the previous year (a fall of 22.57 per cent). On the other hand, the number of applications under section 35, Act XII of 1881, to eject protected tenants for non-payment of rents rose by 5,178 or 28.70 per cent. The increase was general in every district, but most marked in the Rohilkhand and Benarcs divisions and in Saháranpur, Cawnpore, and Gorakhpur. Ejectment actually took place in the case of 38.85 per cent. of the notices issued as compared with 38.98 per cent. in 1893.94 and 36.29 per cent. in the previous year. The area affected rose from 40,502 acres in 1893.94 to 55,559 in the year under review. The number of resignations of occupancy holdings shows an increase of 12,604 as compared with the previous year's figures, and is attributed to agricultural depression. Many of these resignations are doubtless forced on the tenants, who thus forfeit their occupancy rights, but are let in again as tenants-at will.

While the tenant area has risen by over 133,000 acres, the protected area shows a decrease of nearly 40,000 acres, following an increase of 20,000 acres in the previous year. Although the area recorded as held with rights decreased from 10,283,657 to 10,243,839 acres, on the other hand the area held by tenants over 12 years, in which they could assert and maintain a right of occupancy, increased from 3,215,575 to 3,395,290 acres, an increase of nearly 180,000 acres, which, if only recorded as occupancy, would far more than compensate for the decrease of 40,000 acres in the recorded privileged and occupancy area.

In Oudh there was a falling off in the number of suits instituted from 35,431 to 33,909; the most marked decrease occurring under the head of suits to contest enhancement or ejectment. Eviction actually took place from 8,306 holdings with an area 55,717 acres, and about one-third of this area was relet to new tenants. The average rise in the rent of lands relet from which statutory tenants were ejected, was a little more than 7 per cent or slightly above the percentage allowable by law in individual cases. A special report was submitted by the Board of Revenue in the course of the year on the subject of illegal enhancement; but as sufficient trustworthy evidence had not been adduced to warrant a recommendation for the immediate amendment of the enhancement sections of the Rent Act, the Government approved the proposal of the Board that District Officers should continue to watch the working of the Act, and to scrutinize more carefully reported cases of illegal enhancement. It would appear that, in the year under review, the devices used to evade the law were less widely resorted to than in previous years, owing possibly to the difficulty landlords had in realizing even the existing rents in full; and although the practice undoubtedly still prevails, no authenticated case came to light in which a premium was levied on the grant or renewal of a tenancy.

There were 3,559 appeals for disposal by Judges, of which 57 per cent. (2,040) were decided. The pending file, though still heavy, was reduced in both provinces, and the figures are 517 in the North-Western Provinces and 1,002 in Oudh. The Judicial Commissioner was requested in 1895 to suggest means for the disposal of the heavy arrears in the appeals to Judges in suits under the Oudh Rent Act, and he reported that the District Judges of Fyzabad, Gonda, and Rae Bareli in whose courts

the pending files of rent appeals were heavy, had been directed to apply for the transfer of civil appeals to the courts of Subordinate Judges. The average duration in the North-Western Provinces has been reduced from 7 months, 18 days to 6 months, 11 days; but in Oudh it continues very high, being 11 months and 5 days.

Excluding the figures for Kumaun, appeals in rent cases to Commissioners diminished by 1,115 cases. The number of pending cases was greatly reduced, there being only 833 at the close of the year as compared with 2,207 when it began, and 85 cases only were pending over 3 months against 591 in the previous year.

The cases for disposal by the Board fell from 3,441 to 3,237, and those decided from 2,796 to 2,205. The distribution of judicial work between the members was more equal than in the previous year, but the pending file is large; being 1,032 cases against 645 in 1893-94.

The falling off in the total number of processes, and in the arrears for the recovery of which they were issued, was due to a decrease in the minor processes of writs and arrests, which were employed more sparingly than usual on account of the poor harvests. Care and discrimination were generally exercised in the issue of processes for the collection of the revenue, and due allowance made for the circumstances of the people in parts where the harvests were seriously deficient. On the other hand, attachments of movable property considerably increased, and the number of sales more than doubled. Sales were largely resorted to in the Allahabad and Lucknow divisions, and emphasise the difficulty experienced in collecting the revenue. A large reduction in the number of arrests and attachments is observable in most of the districts that were singled out for mention last year. In Mecrut alone the writs diminished from 705 to 22, owing to the introduction by the Collector of a system he found to work well in Basti some years ago, by which patwáris were required to prepare statements of the demand for distribution to the lambardárs, 15 days before the revenue instalments fell due.

There would appear to be considerable difference of opinion as to the results of the experiment, which has been introduced, of utilising the post for the service of writs. In some districts the system has been attended with much success, while in others it is unhesitatingly condemned. There is no doubt that the circumstances of the year were not favourable for working the system, and that it deserves a further trial even in the districts where it has been pronounced a failure. The fact that it prevents the employment of temporary process-servers, who are necessarily less under restraint than the permanent staff, is a strong recommendation of the system.

The statistics of transfers showed in the North-Western Provinces a decrease in the number of transfers by public and private sale, but an increase in the number of mortgage cases. But in neither case was the change very remarkable. Whether the increase in mortgages be due or not to bad harvests, it is satisfactory to note that the number of mortgages fell below what it was in the prosperous year, 1893-94.

In Oudh, on the other hand, sales have increased in number, notably those by order of the courts, in which the increase is relatively large. The only satisfactory feature is an increasing number of redemptions.

The statistics given of the sales, compulsory and voluntary, in the united provinces distinguish between those which have taken place on land assessed to revenue from those of land free of revenue.

In the North-Western Provinces there occurred in revenue-paying land:-

```
In 1893-94 ... ... ... ... ... ... ... 20,895 sales.
,, 1894-95 ... ... ... ... ... ... ... ... 20,485 ,,
whereas in land free of revenue there were :—

In 1893-94 ... ... ... ... ... ... ... 1,334 sales.
,, 1894-95 ... ... ... ... ... ... 1,176 ,,
```

• The proportion of sales in the former to those in the latter class of land was as 16 to 1 in 1893-94 and as 17 to 1 in 1894-95.

The areas of the two classes of land are given on page 22, Form D, of the Appendix to the Administration Report for the North-Western Provinces and Oudh for 1894-95 as follows:—

```
Acres.

Revenue-paying land (under headings I to 5) ... ... 42,086 120

Revenue-free land (under headings 6 and 7) ... ... 2,008,656.
```

The area which pays revenue is to the area free of revenue as 21 to 1.

In Oudh the statistics yield still more remarkable results. The sales of land paying revenue in that province were to those of land free of revenue:—

```
In 1803-94 2s 32 to 1
, 1894-95 , 37 ,, 1
```

The area of the former class of land as shown in the statement quoted above is to that of the latter class as 75 to 1.

As far then as these statistics go, they afford at any rate some negative evidence that the revenue demand has had no effect in increasing the alienation of land. If it had had any such effect, it might be reasonably expected that the sales in land assessed to revenue, would have been proportionately more frequent in such land than they were in land which is not liable to such a burden. This, at any rate judging by the relative frequency of the sales in the two classes of land, has not been the case. The statistics unfortunately do not show the areas transferred, but it may be presumed that they bear appproximately the same proportion to one another as is borne by the numbers of the sales that took place.

The disposal of partition work was satisfactory, only five districts showing cases pending over three years. The number of applications was large in the Gorakhpur and Meerut divisions, but mere than half were disposed of. There was an increase of nearly 6,000 in the number of mahals, or 4 per cent. on the total number. In the draft Bill to amend the Land Revenue Acts of both provinces, proposals were formulated for the encouragement of imperfect partitions, and the discouragement of the formation of very minute properties by perfect partition.

Advances under the Land Improvement Loans Act, although higher by over Rs. 11,000 than in the previous year, are still small, amounting in the year under report to only Rs. 77,781. In the North-Western Provinces the Allahabad division showed a large increase, but elsewhere there was a general decrease, which was most marked in Meernt and Benares. In Oudh the figures nearly doubled; but were still below those of previous years, and it is probable that extension of settlement operations here has reduced the demand for loans. The Board of Revenue have remarked that there is no "persistent and spontaneous demand for Government aid." The connection between this fact and the degree of security of tenare enjoyed in the Provinces, is a matter which the Lientenant-Governor will pursue on a convenient occasion.

It was suggested last year that loans might usefully be given for drainage works. The only hindrance in the way of carrying out this suggestion is said to be the difficulty of combined action among landowners, and of reconciling conflicting interests, as well as that of obtaining competent engineering advice. The question of amending the law with a view to promoting drainage works, is under the consideration of the Local Government.

There was a marked increase in the advances under the Agriculturists' Loans. Act. The figures are the highest on record since the Act was passed, and amounted to Rs. 6,77,280 as compared with Rs. 1,97,983 in the previous year. The largest increases were in the Allahabad, Lueknow, and Fyzabad divisions, where the effects of the bad seasons were most severely felt and where in somedistricts there was a heavy mortality among cattle. The money distributed was of material assistance to the agricultural classes, whose resources were, owing to the character of the year greatly reduced. The Collector of Banda believing that

too high a standard of security was exacted before advances were made, introduced a system of making several cultivators jointly and severally responsible for the advances made to each without any other security. That system has been, within the Lieutenant-Governor's knowledge, tried with excellent results in other parts of India; but it must be judged in these provinces by its result, and its working will be carefully watched. Mr. Rose, the Commissioner of Agra, has not yet formulated his proposals for improving the method of advances under this Act, although he promised to have them ready in March 1896. Mr. Harington, the Commissioner of Meerut, discussed at length a scheme for advancing money for seed and cattle through selected landholders, and this will be taken into consideration along with Mr. Rose's proposals.

An interesting note has been prepared by the Director of Land Records on agricultural depression during recent years. The remedy suggested is the drainage of depressed areas, and although much has been done in this direction in the canalirrigated districts, there are many others in which schemes could be carried out with advantage.

6.—Excise.

The total real receipts of the year, that is, the gross receipts, inclusive of the

Country liquor English ditto Drugs Opium Tari Fines and miscellaneous,	1893-94, 14s. 38,50,765 3,62,777 7,57,958 7,90,097 89,246 1,820	1894-95. Rs. 36,20,838 3,88,261 7,83,060 7,68,736 85,812 1,901
Total	58,52,663	56,48,608

amounts credited in 1893-94 on account of the year under report and exclusive of refunds and advance payments made on account of 1895-96, amounted to Rs. 56,48,608 as compared with Rs. 58,52,663 in the previous year, when the receipts were the highest on record. There was thus a falling off of $3\frac{1}{2}$ per cent. in the income

as compared with the previous year; but the receipts were somewhat higher than those realized in 1892-93, and considerably in excess of those of the two years preceding. The charges at the same time fell from Rs. 1,33,507 to Rs. 1,23,396, owing chiefly to the closing of certain distilleries. There was an increase in the charges for district office establishment owing to the changes introduced by Mr. Alexander's scheme; but such charges will not in future appear, as the Government of India has ruled that the cost of the joint establishment employed on the work of several departments shall in future be debited to the head of Land Revenue.

Throughout the central and western parts of the Provinces, including all the more fully-developed and thickly-populated districts, the distillery system was in force, the modified distillery system having altogether disappeared. The outstill and farming

systems were in force only in the thinly-populated and frequently-inaccessible tracts on the northern, eastern, and southern boundaries of the Province. On the north and east the area under these latter systems formed, except in the north of the Gonda and Bahraich districts, a continuous tract extending from near Hardwar to Ballia. On the southern border the uplands of Mirzapur, and the whole of the country south and west of the Jumpa, except small portions of the districts of Allahabad, Etawah, and Muttra, were under the outstill or farming systems. The total area in which outstills were allowed either under direct management or with the intervention of a farmer was 38,000 square miles, with a population of 8,750,000, while over an area of 68,500 square miles, with a population of 38,000,000, the liquor traffic was under the strict control of the central distillery system.

There were no changes in the area under the distillery system during the year. A suggestion made by the Commissioner of Excise for the experimental opening of bonded warehouses as a check on the illicit distillation of liquor was considered by the Government, and orders were issued for the trial of the plan in the portion of the Ballia district that was still under the distillery system, where it had hitherto been found impossible to prevent the smuggling of cheap liquor from the outstills in the adjoining tracts. Considerable progress was made in the closing of the smaller distilleries—a measure that is not only desirable in the interests of economy, but is likely to lead to the introduction of improved methods of manufacture. The permission given during the last six months of the year to distil proof spirit on payment of a still-head duty of Rs. 2 per gallon was not taken much advantage of, the amount of spirit of this strength issued being less than 1 per cent. of the whole. There was not apparently much demand for the stronger liquor except in a few of the western districts.

The total decline in the receipts from country liquor was about $2\frac{1}{4}$ lakhs of rupees, from $38\frac{1}{2}$ to $36\frac{1}{4}$ lakhs. At the time at which the sales of the fees for licensed shops were held there was nothing to indicate the approach of unfavourable seasons, and the prices paid were, on the whole, higher than in the previous year, a fall of Rs. 21,000 in Oudh being more than compensated for by an increase of Rs. 72,000 in the North-Western Provinces. But the seasons proved unusually unfavourable; the prosperity of the agricultural and labouring classes, especially in the eastern districts, was seriously affected by the partial failures of successive harvests; and there was a great decrease in the consumption of liquor. The receipts from still-head duty fell off by about a lakh in the North-Western Provinces and two lakhs in Oudh.

The question of the effect on the excise revenue of the octroi taxation imposed in many municipalities on the materials used in the manufacture of spirits had been under discussion for some years past. The taxation of mahua was in many cases excessive, but steps were taken during the year to have it reduced; and further examination of the question has shown that the taxation imposed was not such as to seriously affect the price of country spirits, and thus to increase the income of municipalities at the expense of the excise revenue. The grant of refunds on exported liquor, on account of the taxation on raw material, would involve complicated arrangements, and it was decided that no further action was required.

There was an increase of Rs. 24,000 in the receipts from still-head duty on rum and spirits of wine, and a slight increase in the license fees for the sale of European spirits.

The administration of hemp drugs has been put on a new footing from the commencement of the current excise year, in order to give effect to the recommendations of the Hemp Drugs Commission by which the administration of this branch of Excise is brought under much stricter control. The receipts from the fees for the sale of these drugs rose from Rs. 7,57,958 to Rs. 7,83,060, and were the highest ever obtained. The increase was coincident with a slight reduction in the number of shops, and a very considerable decrease in the recorded imports of the drugs. These figures are, however, untrustworthy.

The total excise on opium fell from Rs. 8,88,730 to Rs. 8,77,007, but these figures include the total price at which opium is sold to vendors, a part of which is credited in the Opium Department. The gross receipts credited to the Excise Department were Rs. 7,65,000 as compared with Rs. 7,94,000 in the previous year. License fees rose from Rs. 1,65,000 to Rs. 1,69,000 (the rise in real receipts under this head being apparently considerably more); but the receipts from the sale of opium fell from Rs. 6,27,000 to Rs. 5,95,000, partly owing to diminished sales, but chiefly to the raising of the price at which opium is supplied to the Excise by the Opium Department. The decrease in the sales, which was chiefly in those to non-official vendors, was possibly owing to the unfavourable conditions of the year, but appeared also to be connected with the extension of the area under poppy, which rose from 358,000 to 462,000 bighas. Very small success was attained in checking the smuggling of opium by cultivators, the prevention of such practices being a matter of unusual difficulty.

The enhancement of the price at which opium is issued from the treasuries did not have the effect of diminishing the fees paid for liecuses of vend, nor was the small decline in consumption attributable to the rise in price.

Prosecutions for offences were less numerous and less successful than in the previous year, and in many of the districts in which statistics showed that there was most reason to suspect the existence of illicit practices little activity was exerted in bringing offenders to justice. The police were reported to be apathetic in this matter.

7.—Ѕтамры

The gross receipts are compared below with those of the two preceding years :-

Year.		Non-Judicial stamps.	Court fee stamps.	Copy stamps.	Total.
		$\mathbf{R}s.$	Rs.	Rs.	Rs.
1893-94	141	17,74,956	50,78,200	3,96,708	72,49,862
1894-95	•	18,68,343	48,30,059	3,78,882	70,77,234
1895-96	•••	18,65,509	50,48,338	3,86,161	73,00,008

The total income from non-judicial and court-fee stamps was the highest on record, the incidence falling at Rs. 147 per mille of population as against Rs. 142 in 1894-95. The explanation of the large increase in the receipts from court-fee stamps probably is that a considerable increase in obligations renewed or incurred, such as is indicated by the figures of the past few years, naturally led to an increase in litigation. In particular districts a large part of the increase was assignable to special causes, as in Aligarh, where a rise of 29.85 per cent. (Rs. 53,531) in the receipts from court-fee stamps was mainly due to the appointment of an Additional Judge.

The receipts from the stamping of skeleton forms increased from Rs. 6,111 to Rs. 9,444, i.e. by 54 per cent. There was a nominal decline of Rs. 1,064 (from Rs. 1,00,288 to Rs. 99,224) in the sale of receipt stamps. This was more than accounted for by a falling off of Rs. 3,403 in the Agra district, due to the prevention of the exportation of these stamps to the Bombay Presidency, where the rate of discount is lower than in these Provinces. The revenue under this head might have been improved. Sales of hindi stamps rose by Rs. 9,039 or 9 per cent, the increase being generally assigned to speculations in grain.

Sales of document stamps fell by Rs. 14,631 or 89 per cent. The decrease exceeded Rs. 1,000 in twenty-two districts, including almost the whole of the Allahabad, Benares and Gorakhpur Divisions. The decrease was also general throughout Oudh. The decrease which was variously explained was in some cases attributed to special and local conditions as in Mirzapur and Sultanpur, where the liberal grant of takāvi advances perceptibly diminished the professional money-lender's loans.

The receipts from the sale of copy stamps rose by Rs. 7,329 or 1.94 per cent. The increase was chiefly due to the revised scale of fees sanctioned by the High Court or the North-Western Provinces, and introduced in October 1894. The Board of

Revenue contemplate the introduction of a similar system of fixed fees to the revenue courts. The question of facilitating and cheapening the grant of copies in the courts continued to receive attention.

The gross charges of the Department fell from Rs. 1,54,071 to Rs. 1,33,815. The decrease was mainly due to the cost of the establishment being debited to the Revenue Department, except in Dehra Dun and the Kumaun Division. An increase under the head "Contingencies" was also largely nominal. Refunds of the value of spoiled stamps showed a considerable increase.

The amount realized by Collectors as stamp duty under sections 37 and 38 of the Stamp Act rose from Rs. 7,066 to Rs. 10,578, while the amount of penalties realized under section 37 fell off from Rs. 4,325 to Rs. 3,285.

The percentage of documents held to have been wrongly impounded slightly increased. Prosecutions were less numerous, but more successful, the percentage of acquittals being 11.2 as against 18.4 in the previous year.

With few exceptions inspections were regularly made and note-books maintained.

8.-INCOME-TAX.

The following table compares the receipts from the tax in the year under report and the three preceding years:—

•		Salaries, pensions, and annuaties. Profits by co			Interest		Other sources of incomo.		Total collections.	
Year.	Number of	Amount of tax.	Number of assessees.	Amount of tax.	on securi- ties-	Number of assessees.	of	nud penal- ties.	Number of asseesees.	Amount of tax.
	}	Rs.		Rs.	Rs.		Rs.	Rs.		Rs.
1892-98	8,708	3,99,528	38	81,321	33,463	66,865	17,33,256	657	75,611	22,48,225
1899-94	8,897	4,31,736	87	83,821	33,840	67,332	17,70,122	728	76,266	23,20,247
1894-95	8,873	1,47,659	44	86,290	40,373·	67,759	18,06,964	705	76,676	23,81,991
1805-96	9,317	4,55,848	45	96,900	29,150	, 68,864	18,30,631	1,274	78,226	42,13,803

Receipts continued to increase under every head except Part III (Interest on Securities). The decline under this head amounted to 27 per cent., and was perhaps due to the reduction in the rate of interest on securities of the Government of India and the consequent withdrawal of large sums. The total amount of Government securities on which the tax was paid fell from 12 to 8 crores. The fall in receipts from local securities was, however, equally marked.

The figures marginally noted show that the income from this source, which Receipts under Part III.

1886-87 ... 30,176 | 1891-92 ... 36,949 sive, is liable to considerable fluctuations.

1887-88 ... 37,903 | 1892-93 ... 33,463 sive, is liable to considerable fluctuations.

1888-89 ... 40-453 | 1893-94 ... 33,840 The improvement under Part II (Profits. 40,373 1890-91 ... 52,642 | 1895-96 ... 29,150 of Companies) was mainly due to the

The increase under "other Sources of Income" (Part IV) amounted to Rs. 23,667 or 1.3 per cent., as against 2 per cent. in the preceding year, and was thus distributed:—

growing prosperity of the Cawnpore manufacturing companies.

	Num	ber of				
	assesse	es in—		Receir		
	,				·	
	1894-95,	1895-96.	Increase.	1894-95. Ra	1895-96	Increase.
Incomes of under Bs. 1,250.	51,294	52;175	881	6,38,072	$\mathbf{R_{s}}.$ 6,52,210	Rs. 14,138 or 2.2 per sent:
Incomes of Rs 1,250 and over.	16,465	16,689	224	11,68,892	11,78,421	9,529 ,, '8 ditto.

The increase in penalties (from 36 to 140 cases) and in coercive processes generally was somewhat noticeable. The rise, however, in the assessments on the lowest class of incomes (those of under Rs. 750 per annum) amounted to Rs. 939 only, which represents an average of about two new assesses of the lowest class per district, and the sum raised from that class continued to be 17 per cent. of the total receipts under Part IV, Probably therefore the tax did not fall with undue weight on the poorest assessees.

The incidence of the tax rose from Rs. 43 per thousand of the population in 1894-95 to Rs. 44 in 1895-96. One person in every 648 of the population was assessed as against one person in every 661 in the previous year, and the average amount of tax paid by each person assessed was Rs. 28, as in the previous year.

The number of objections rose from 19,823 to 22,153, i.e. by 11 per cent. Twenty-nine per cent. of the objections were successful, and the original demand was reduced by Collectors on revision by Rs. 96,441, the figures for 1894-95 being 31 per cent. and Rs. 97,483 respectively. Appeals to Commissioners increased by 42 per cent., and the percentage of success rose from 25 to 26, Rs. 8,751 being remitted by Commissioners in 1895-96 as against Rs. 5,711 in 1894-95. The final demand, after the disposals of objections and appeals, stood at 94.5 per cent. of the original demand as compared with 94.6 per cent. in the preceding year.

The figures for individual districts showed considerable variations, which were seldom entirely traceable to changes in trade conditions. A decline in the total assessment of 31 per cent. in Pilibhít and of 6 per cent. in Bareilly was attributed to the poorness of the sugarcane crop, on the success of which income tax receipts in the Rohilkhand Division are largely dependent; and agricultural distress explained a falling off in four districts of the Allahabad Division. In the assessments in the Partábgarh, Sitapur, and Gházipur districts there was a heavy fall due to different causes. In Sitapur the assessments had been unduly raised in the previous year, and in Partábgarh and Gházipur the initial assessments appeared to have been injudiciously made in view of the large remissions subsequently allowed on objection and appeal. In Basti, where the incidence of the tax was extremely low, the assessment was raised by 30 per cent.; but the increase was mainly obtained from the lowest class of incomes, and the objections were in consequence numerous and successful, 16 per cent. of the initial demand being ultimately remitted. In Mirzapur the assessment was raised by 19 per cent. Numerous cases from this district examined by the Board showed that the majority of objections had been disposed of on inadequate reports submitted by Táhsíldárs, and owing to the late disposal of objections, a balance of Rs. 2,340 was left outstanding at the close of the year. In the districts of Dehra Dún, Moradabad, Ballia, and Lucknow, and in several districts of the Allahabad Division the initial assessments appeared to have been framed with insufficient care, as a very large propertion of the new assessees had to be struck off. Similar results in Azamgarh and the improper taxation of the poorest classes in Bara Banki and Etawah were due to the indisereet action of Tahsíldárs and a sufficiently effective supervision over the administration of the Act was not exercised in the Etah, Mainpuri, and Naini Tal districts.

Elsewhere the results were more satisfactory. In the Meerut Division the percentages of objections to assessees and of total remissions to original assessments were 20·3 and 1·9 respectively, the provincial averages being 30·2 and 4·9 per cent. These results were due to greater care in framing the initial assessments, for the incidence of the tax in this division was generally high and rose during the year under report in every district except one. In the Meerut district in which the incidence of the tax was twice the provincial average and the final demand rose by Rs. 2,143, only 19 out of 328 new assessments and 7 out of 547 new enhancements had to be struck off. In the Agra Division, the districts of Agra and Farukhabad were well administered and in the Muttra district a substantial increase in the initial demand was accompanied by a falling off in objections. Large remissions were, however, made on objection and appeal. In Allahabad the reductions which the prevailing distress necessitated

were carefully considered when the initial assessment was framed, and out of 276 new assesses added to the list only eight had to be removed in consequence of successful objections. The large rise of Rs. 8,144 in Jhánsi in the same division was due to an unusual increase of trade. In Unao and Bahraich, where the demand was raised by 4 per cent. and 18 per cent, respectively, objections and appeals were not unusually numerous or successful and the assessments were carefully framed. The worst results from this point of view were shown by the Benares and Gorakhpur Divisions, as appears from the following figures:—

Division. of			Percentage of more or less successful objections.		Number of appeals,	Number of more or less successful appeals.	Percentage of total reductions to original assessment.
Benares ,	•••	4	40.3	35 9	416	76	9.2

All Divisions	***	•••	30-2	26.9	2,527	646	4.9

9.—CURRENCY.

There was a considerable decrease in the demand for currency notes during the year: the average monthly circulation falling from Rs. 1,44,67,940 in 1894-95 to Rs. 1,23,69,009 in 1895-96. Local remittances from other treasuries to the Allahabad Treasury amounted only to Rs. 39,55,000 as compared with Rs. 88,95,000 in the previous year. There was, however, an increase in the value of foreign circle notes cashed to the extent of Rs. 56,78,000. The figures at the close of the year show a decrease in notes of all denominations above Rs. 20, with the exception of notes for Rs. 1,000, as indicated by the following figures:—

		Rs.	$\mathbf{R}_{\mathbf{s}_{s}}$	Rs.	Rs.	$\mathbf{R}_{\mathbf{S}}$.	Rs.	Rs.	~
		5	10	20	50	100	500		Rs.

4.20102555			70,402	+2,218	-909	-1,410	-240	+ 372	-57

Temporary currency agencies continued to be largely utilized for the transfer of funds between treasuries. Six currency chests were opened during the year for the collection of shroff-marked coin for transfer to the mint. A sum of Rs. 2,18,00,000 was remitted to other Provinces from the currency agencies as under:—

			To CALCUT	TA.

tal sum of	Bc 915	0.000			•••	***	151

A total sum of Rs. 24,50,000 was remitted between agencies within the Provinces. The local receipts at agencies in the year amounted to Rs. 2,12,25,000 as compared with Rs. 2,63,75,000 in the previous year, and the closing balance was reduced to Rs. 37,00,000. This decrease was due to heavy remittances to other Provinces.

There were four cases of forged notes during the year:-

- (1) a note purporting to bear the No. $\frac{R_{*}}{85}$ 49884 for Rs. 10 of the Calcutta Circle was presented at the counter of the Currency Office by the Agent of the Bank of Bengal;
- (2) a note purporting to bear the No. 75496 for Rs. 100 of the Bombay Circle was presented at the Cawnpore Railway goods shed;
- (3) two notes purporting to bear the Nos. $\frac{E}{42}68310$ and $\frac{E}{42}68,810$, for Rs. 5 each, of the Lahore Circle were paid in at the Debai Railway Station of the Oudh and Rohilkhand Railway; and
- (4) a note purporting to bear the No. V. 1843722 for Rs. 1,000 of the Calcutta Circle was presented for payment at the Basti treasury.

These cases are still under investigation.

No notes of the Allahabad Circle bearing advertisements on the reverse were presented, and such notes appear practically to have been withdrawn from circulation.

No remittances were made from other circles, but one of fifty lakhs was made to Calcutta in November 1895, and a remittance of shroff-marked coin to the amount of Rs. 10,92,440 was forwarded to the mint in January 1896.

Home notes of the value of Rs. 2,85,35,800 were cancelled during the year. The value of these notes was less than in the previous year (the number of notes of high denominations cancelled showing a considerable decrease) but the total number of notes cancelled was larger.

Fifteen notes of an aggregate value of Rs. 335 were credited to Government, viz.:—

						R.S.
б	Half notes, value	-40	***	***	344	90
10	Mismatched notes, value	***	***	•••	***	245

No credit, however, was afforded to Government on account of the value of fraudulently altered notes.

A large surplus of coin was available for cashing Calcutta and Lahore Circle notes: the amount on the 31st March being Rs. 1,08,61,942.

B.—Revenue and Finance other than Imperial.

Provincial and Local Accounts, North-Western Provinces and Oudh, 1895-96.

In the budget of the year as originally framed the receipts were taken at 3,25,52,* and the opening balance at 32,09, making a total of 3,57,61,. The estimates provided for an expenditure (including contributions to Local Funds) of 3,37,61, and for a closing balance at the end of the year of 20 lakhs, the amount which the Provincial Government is under an obligation to maintain as a minimum balance.

In the revised estimates the receipts, including the opening balance, were taken at 3,47,36, or less by nearly 10 lakhs than in the budget estimate. The expenditure was put at 3,30,25, showing reductions of over seven lakhs on the original estimates, and the closing balance was estimated at 17,11, instead of 20 lakhs. The actuals of the year proved worse by Rs. 64,000 than the revised estimates, receipts being less by Rs. 28,000 and expenditure greater by Rs. 36,000 than had been anticipated when these were prepared.

The falling off in the receipts was owing chiefly to the exceptionally small income from Irrigation, and the decline in the total expenditure was caused by the retrench ments made, especially in the Public Works Department, with a view to avoiding a deficit on the year's transactions if possible.

^{*} These figures, when not preceded by "Rs.," represent thousands of rapees,

The original budget estimates under provincial heads compare with the actual receipts and charges as follows:—

						$m{B}udget.$	Actuals.
Opening balance		***	***	•••	•••	32,09,	30,45,

Closing balance		***	***	•••	***	20,00	16,47,
_							_

The actual receipts of the year thus proved worse than the estimate by 8,89,. The falling off is more than accounted for by the failure of the irrigation revenue, which fell short of the very moderate estimate made by 9,53,. This deficiency was owing to the exceptionally low demand for water during the wet cold weather of 1894-95, the charges for water supplied then being realized in the financial year 1895-96. The area irrigated during that season from the principal canals was only 151,548 acres as compared with an annual average of over a million acres in the years 1886-87 to 1893-94. But for a large demand for water for irrigation of rice in the autumn of 1895, the deficiency would have been still more serious. The Excise revenue also fell short of the estimates by three-quarters of a lakh, owing partly to adverse agricultural conditions and partly to the enhancement of the cost price of opium, which had the effect of reducing the gain on sales of Excise opium. The receipts of the Forest Department fell short of the estimate by 49, and those of the Jail Department by 42, On the other hand, the receipts were improved by the repayment of the contribution of five lakes made in the previous year to the Imperial Government, The repayment was made by an alteration in the adjusting figure, and had the effect of raising the provincial share of receipts from Land Revenue above the budget figure by 89, though there was a considerable deficit in the total collections of Land Revenue, owing to unfavourable agricultural prospects towards the close of the year. The receipts under the heads of "Stamps," "Assessed Taxes," "Interest," "Police," "Miscellancous," and "Civil Works" were somewhat better than the estimates.

On the expenditure side there was a saving under the great majority of heads, owing chiefly to retrenchments made by Government during the year, in order to economize expenditure as far as possible in view of the anticipated falling off in receipts. The rise in the rate of exchange at the same time lowered the charges for exchange compensation allowance, and allowed of savings in establishment budgets. Under the head of "Assignments" the expenditure was less than the estimates by 43, owing to the non-payment of certain allowances pending settlement of a dispute as to the title to them: and under the head of "Land Revenue" the charges fell short of the estimates by over a lakh (1,05,), owing to the reduction of expenditure on survey and settlement. In the Police Department the Inspector-General was requested to make such savings as he could, and retrenchments to the extent of 81, were offected. The stress, however, of financial pressure fell chiefly upon the Public Works Department, where the allotments were retrenched from time to time as the deficit in receipts threatened to become more serious. The actual expenditure of the Irrigation Department fell short of the estimates by four and-a-quarter lakhs (4,27,); in Civil Works (Provincial) there was a saving of 2,30, and the contribution to Local was reduced, partly by postponement of Local Public Works, partly on account of the improved collections from Local Rates, by 2,53,. These extensive retrenchments would, with the aid of the repayment of five lakhs by the Government of India, have sufficed to maintain the provincial balance at the prescribed minimum of 20 lakhs but for excess expenditure under the following three heads, the full extent of which was not foreseen when the revised estimates were prepared :-

Jarls ,		, • 4	***	111	•••	• • • •	1,98,	•
Stationery and Printing	***	4.4	***	***	***		1,68.	
Famine Relief	***		. 945	121			1 77	

The jail population, owing to the pressure of hard times, increased rapidly during the year, and an overflow jail had to be opened in the Fort at Chunár. The increase in numbers, combined with high prices, necessitated a large increase in expenditure. The receipt of large supplies of stationery from Calcutta for the Government Press, the stocks of which had been reduced in the preceding year, is chiefly responsible for the increase under Stationery and Printing. The failure of the cold weather rains caused great distress in various parts of the Province in the early months of 1896, especially in Bundelkhand, where the people were suffering from the effects of a series of bad years, and before the end of March measures for their relief on an extensive scale were necessary.

On the Local side of the accounts the receipts (exclusive of the provincial contribution) were estimated at 84,83; but the actuals, owing chiefly to an improvement in the collection of Local Rates, amounted to 85,46,. The expenditure, which was estimated at 1,09,60, amounted to 1,06,73, the difference being partly owing to savings in the charges met from the Patwári Fund and partly to the postponement of Local Public Works already referred to. The balance at credit of the Local Funds, which chiefly belongs to the Patwari Fund, stood at 9,05, instead of 8,20, the estimated closing balance of the year.

The following table compares the general financial results of the year with those of the year 1894-95:-

			1895.96.		1894-95.			
Opening balance Receipts	104	Provincial. Rs. 30,45,376 3,16,63,510	Local. Rs. 10,67,975 1,05,09,997	Provincial. Rs. 47,05,000 3,17,52,000	I,ocal. Rs. 12,84,000 1,04,82,000	Total. Rs. 59,89,000 4,22,34,000		
Total Expenditure Closing balances	111	3,47,08,886 3,30,61,493 16,47,393	1,15,77 972 1,06,73,120 9,04,852	3,34,12,000	1,17,66,000 1,06,98,000 10,68,000	4,82,23,000 4,41,10,000 41,13,000		

The differences of over half a lakh between the receipts of the two years were as under:—

•				Provincial.		Loc	al.
						+	
				Rs.	Rs.	Rs.	Rs.

In charge of Civil Officers				***	1,14,000	•••	***
Ditto	Public	Works officers	•••	***	18,40,000	1++	4 00

The collections of land revenue in the previous year were unusually low, and the contribution of five lakhs made in that year to the Government of India was deducted under this head. The decrease under "Excise" and "Irrigation" has already been explained. The increase under "Interest" was due to the general expansion of loan business, and to payments in liquidation of loans being made in 1895-96 that would in ordinary course have fallen due in 1894-95.

The total expenditure of the year, notwithstanding the exceptional charges for "Jails," "Stationery and Printing," and "Famine Relief," was less than that of the previous year by over three and-a-half lakhs, amounting to 3,30,61, under

Provincial heads as compared with 3,34,12,. The following statement shows the more important differences in the charges of the two years:—

				Pro	vincial.	Local.	
			1	+ R ₉ .	Rs.	+ Rs.	Hs.

Di	tto	Public	Works				
officers		•••	•••	***	1,47,000	84,00	0

The increase under "Interest" was due to the grant of further loans to Municipalities, and that under "General Administration" to accidental causes, such as the payment during the year of arrears of salary owing to the late Officiating Lieutenant-Governor and the absence of a number of Commissioners on privilege leave. The high prices of food grains and the growth of the prison population led to the increase under "Jails." The increase under "Superannuation Allowances and Pensions" represents the ordinary growth of these charges; and the decrease under "Subsidized Companies" is accounted for by the discontinuance of the payment of the annual subsidy of Rs. 40,000 to the Rohilkhand and Kumaun Railway Company. The other differences of importance are owing to causes already referred to.

As regards the variations under "Local," the increase under "Land Revenue followed on extended operations in connection with Land Record Surveys. The decreases under "Education" and "Civil Works" were due to retrenchments made in the expenditure of these Departments in consequence of the general financial position.

Cash balances and resource operations in the North-Western Provinces and Oudh for the year 1895-96.

I.—Cash balances.—The following table shows in lakes the estimated minimum balance of the Province, and the actual cash balance on the first day of each month of the last two years, with the minimum proposed for 1896-97:—

1	1		3	4	5	6
		1894	95.	1898	1896-97.	
First of—	Estimated minimon.			Estimated Actual cash balance.		
		Rs.	\mathbf{R}_{s} .	Rs.	Rs.	Rs.
October November December January February March April May June July August September		131 100 106 134 166 161 163 143 191 218 212 169	212 179 202 256 320 244 209 145 204 269 238 201	184 100 106 134 166 161 163 143 191 220 215 172	170 - 122 131 163 176 162 166 177 203 259 225	136 100 106 134 106 163 163 143 •191 221 216

The year 1895-96 opened with a balance of 36 lakhs in excess of the minimum, and the balances continued high till January. They were high again during May to July, and then began to fall rapidly. During August and September there was a small nominal excess above the prescribed minimum which could not be utilized as it represented the inefficient balance due to withdrawal from circulation of 1835 coins. From October onwards and during the year 1896-97 there was a continuously increasing deficiency, involving the transfer of large sums from the currency balance to meet the requirements of treasuries.

The amounts taken over from surplus balances by the Comptroller-General during 1895-96 were as follows:—

```
In November ... 14 lakhs.

1 December ... 21 ... 30 ...

1 February ... 10 ... 13 ...

1 June ... 5 ...

1 July ... 33 ...

Total ... 126 ...
```

The total sum made over to banks or remitted to other Provinces in actual coin was 328 lakhs, distributed as follows:—

```
By transfer to banks-
              From treasuries
                                                                19 lakhs.

II.—Movement of funds.—The following table gives details of local remittances for the past 10 years, showing both the nominal and actual coin and currency note movements required within the Province to keep deficit treasuries supplied with funds, or to draw off and accumulate the balances of surplus treasuries. The figures are all in lakhs:—

1	2	3	4	5	6	7	8	9	10	11	
		Whole rupes	19.			Currenc	y Notes.	Total fund move- ments.			
Year.	Actual	ly moved.	Transfers through			Home	Foreign	Coin.	Notes.	Grand	
	Current.	Uncurrent.	currency.			Circle.	Circle.			Total.	
1886-87	383	15		5	4	25	31	407	56	463	
1887-88	316	11	•••	9	4	26	33	340	59	399	
1888-89	397	9	•••	8	4	23	39	418	62	480	
1889-90	410	7	***	9	6	22	35	432	57	489	
1890-91	392	10	10	10	7	25	62	429	87	516	
1891-92	382	4	82	12	6	21	94	486	115	601	
1892.93	360	3	71	13	6	37	102	453	139	592	
1893-94	334	3	88	11	7	44	35	443	79	522	
1894-95	318	1	67	9	4.	35	49	899	84	483	
18,95-96	335	14	86	12	6	36	53	453	89	542	

The figures vary a good deal from year to year as might be expected; the most important details are those given in columns 2 and 4 above. The object in view is to keep down as far as possible the local movements of whole rupees, both on account of the considerable cost of carriage of coin, and of the trouble involved in the examination of coin remittances in remitting and receiving treasuries. Every unnecessary remittance,—that is, every movement of coin from a treasury where it will be afterwards required,-is an evil involving extra trouble and expenditure, and a waste of power in the Police Department for escort duties. Looking at the figures as they stand, it cannot be said that any considerable success has yet been achieved in keeping down Notwithstanding the facilities given by the introduction of the currency transfer system (column 4) in 1890-91, there has not yet been so marked a decrease in the actual coin movements (column 2) as might reasonably have been hoped for. The question has now, however, been taken up systematically, and an attempt made to draw up what may be used as a practical substitute for a Resource Manual for the Province, until a manual of the kind can be written. The normal cash surplus or deficit of each treasury has been worked out month by month on the basis of the actuals for the past three years. From this the normal surplus or deficit for the year has been deduced, and a standard scheme laid down fixing the amounts to be transferred to or from each treasury in the year with the minimum of disturbance. Arrangements have also been made for keeping up a continuous record of actual remittances by districts, so as to show how far the standard plan is departed from, and facilitate its future revision in the light of further experience. The Resource Department of the Accountant-General's Office is now in a position to say approximately how much each surplus treasury can really spare during the year, and where that surplus should be sent, and when. During the short time the scheme was in force towards the close of the year it answered well, and it is calculated that when fully working under normal conditions, the movements of rupees within the Province will be reduced by over a 100 lakhs a year. It is possible that to make the scheme fully effective some slight alteration of the minimum cash balances hitherto adopted may be required, but it is too soon to say this yet. It is recognised that the arrangements are only tentative, and unfortunately the altogether abnormal features of the year 1896-97 threaten to upset all calculations, and to prevent a fair trial of the scheme till 1897-98.

There is nothing to specially notice in the figures for small silver, copper coin, or currency note remittances during the year. Large supplies of copper were required in April and May for famine relief works in the Allahabad Division, but these were principally obtained from Calcutta, and do not affect the figures for local remittances.

The figures for uncurrent silver coin represent mainly the amounts of 1835 coin withdrawn from circulation and collected for remittance to Calcutta. The actual sums so withdrawn in each month since the orders issued have been as follows:--

```

                                          21,84
```

No explanation is forthcoming of the falling off in the last two years, and it would seem that the supply-bill system might be more freely used than it is in order to do away with the necessity for remittances of coin. The districts in which supply-bills are drawn most are Cawnpore and Naini Tal, and these two accounted for about half the total sum drawn in the Province. Endeavours were made to encourage the use of these bills, and with some success, but under present circumstances every district has become temporarily a deficit district to a greater or less extent, and there is not likely, for some time to come, to be any available surplus to draw off by supply bills.

The foreign supply-bills issued amounted to the following sums, in thousands:-

	Drawn by—			On India.	On Panjáb.	On Bombay,	Total.
Dehra Dún Naini Tal Roorkee Allahabad Fyzabad		 Total	:::	2,53 1,25 1,41 5,10	97 83 38 1 2,19	2,20 1,14 47 	5,70 8,22 85 1,41 1

The Allahabad drawings were special, and the remaining figures are about normal. The following table gives the excess of foreign supply-bills issued over those drawn on the Province for the last five years. It will be observed that the amount drawn by the Province is always largely in excess. Enquiries are being made as to whether larger sums could be drawn off from the Province by the grant of supply bills on easier terms in the Panjáb.

Thousands.

Year.	Bille drawn by North- Western Provinces on other Provinces.	Bills drawn by other Provinces on North-Western Provinces.	Excess drawn by North. Western Provinces.		
1891-92 1892-93 1893-94 1894-95 1895-96	Rs. 6,17 6,00 10,30 18,11 11,28	Rs, 22 51 5,19 4,63 2,11	Rs. 5,95 5,49 5,11 13,48 9,17		

IV.—Shroff-marked coin.—The figures are normal, and the coin did not accumulate to an inconvenient extent.

V.—Absorption of small coin.—The following statement shows in thousands the receipts and issues of small silver and copper coin during 1895-96:—

1	2	3	4	5	G	7	8	9
	Half rupees.	Quarter rupees.	Eighth rupees.	Double pice.	Single pico.	Half pice.	Pie pieces.	Total.
Opening balance on 1st Octo- ber 1895.	2,67	4,68	2,95	61	7,90	26	7	19,14

Closing balance on 30th September 1896.	2,27	3,61	3,05	71	6,60	25	11	16,61
Receipte from the public				10				10
Issues to the public	2,10	1,26	60		3,30	1	1	7,28

In 1894-95, for the first time during a very long period, there was an increase in the net receipts of all small coin except half rupees and pie pieces. This departure from normal conditions lasted, however, only for the year 1894-95, as in 1895-96 the amount absorbed was again large. The unusually large amount of copper coin absorbed is due to the famine relief works of the spring of 1896. The following table is interesting as showing the absorption of coin during the last 10 years:—

(In thousands of rupees.)

	Silv	er absorb	ed.	C	opper abs	orbed.	Total absorbed.			
Year.	Half rupees.	Quarter rupees.	Eighth rupees.	Double pice.	Single pice.	Half pios.	Pies,	Silver,	Copper.	Grand Total,

CHAPTER VI.

VITAL STATISTICS AND MEDICAL SERVICES.

1.—Census of the North-Western Provinces and Oudh. (Vide Chapter VI, pages 241 to 252 of Report for 1892-93.)

2.—BIRTHS AND DEATHS.
[See Sanitation Section.]

3.—EMIGRATION.

(a) Inland Emigration.

Emigrants were registered only in one district during the year, viz. Gházipur. The subjoined table shows the number of emigrants, garden sardárs, and local agents:—

District.		Emig	rants.	Depe	Dependants.				
		Male.	Femalo.	Male.	Female,	Garden sardárs.	Local agents.	Remarks.	
Gházipur Allahabad	•••	···	154 	98	***		9	2	* This garden Sardár appeared before the Magistrate of
	Total		154	98	•••		10	2	before the Magistrate of Allahabad, by whom his name was registered, but he did not recruit any labourers.

The total number of emigrants enlisted during the year was 252 against 372 recruited in 1894, showing a decrease of 120. This was due mainly to the fact that free emigration in terms of Resolution of the Government of India, Nos. 16 to 18E. of 27th January 1882, had been more extensively earried on in the chief recruiting centres instead of emigration under the provisions of the Inland Emigration Act.

All of the emigrants recruited during the year from Gházipur were reported to have been medically examined and asked as to their willingness to accept the contract, before they were allowed to proceed to Assam. In that district the garden sardárs are now establishing regular depôts, and the defects noticed last year have been partly removed.

The total reported number of free emigrants recruited otherwise than under the provisions of the Inland Emigration Act was 690, of which 150 emigrated from Basti and 540 from Allahabad. The Magistrate of Gházipur reported that he could give no definite information as to the number of free emigrants sent out from his district during the year, but he believed that emigration outside the Act was carried on to a very large extent in his district. The same remarks apply to Benares. In the last mentioned district a depôt for free emigrants was opened during the year by a recruiter who held a license countersigned by the Magistrate of Benares, and the depôt was reported to have been inspected by the officer in charge of emigration in the district. Complaints that the free recruiters abducted girls and minors from their parents or guardians and dissatisfied women from their homes, and that sanitary rules were neglected were almost general from the districts in which free recruitment was carried on.

The enforcement of the Gorakhpur rules, the further extension of which has been approved by Government, has begun to produce favourable results in districts where they have been introduced, and it is hoped that a more strict and regular working of the rules will soon put a stop to the defects still existing.

Two cases of wrongful confinement and abduction came under the notice of the Magistrate of Gházipur. In one case the licensee of a Calcutta firm was found to have decoyed a woman and subsequently concealed her. His license was cancelled. In the other case another free recruiter was prosecuted for abducting and illegally confining a woman and convicted; but he was acquitted by the Sessions Court in appeal.

The following statement shows the actual receipts and expenditure :-

Receipts.		. Exponditure.					
Hends.	Amount.	Heads,	Amount.				
Fees from licenses of recruiters Fees from registration of emigrants	Rs. 243	1. Refund of emigration fees 2. Establishment 3. Contingencies	Rs. a. p.				
Total	243	Total	29 12 0				

The total receipts were Rs. 243 against Rs. 359 in the last year, and the expenditure was Rs. 29-12-0 against Rs. 44-14-0. There was a decrease of Rs. 116 in receipts and of Rs. 15-2-0 in expenditure as compared with the preceding year.

(b) Emigration beyond India.

The following abstract gives the results of registration in the two years 1894 and 1895, and shows a decrease of 9,392 in the number of emigrants recruited in 1895. The largest number of labourers for the colonies was again recruited in the North-Western Provinces:—

			1894.	1895.
Bengal and Behar	***	***	6,220	3,094
North-Western Provinces and Oudh	***	•••	20,487	14,221
	Total	•••	26,707	17,315

The returns for the various districts of these Provinces show the following numbers of recruits:—

Fyzabad	•••	•••	2,471	Gonda	***	***	583
Benzres	***		1,938	Agra	***		289
Cawnpore	• • •		1,643	Bara Banki		***	157
Gházipur	•••	***	1,436	Bánda		***	119

Gorakhpur	***		740	Bahraich	•••	•••	36
Lucknow	***		689	- 111	***	•••	14
	•	٠,,	900	Batha	•••	•••	2
					Total	1	4,221
K *		77		l		-	

As in the previous year Fyzabad, Benares, and Cawnpore stand first, second, and third on the list respectively as yielding the largest numbers of recruits in the North-Western Provinces and Oudh.

The statement below shows the actual number of natives of these Provinces who were registered during the years 1894 and 1895:—

NT41	TTT	.				1894.	1895.	
Oudh		a Provinces	240	***	***	13,541	10,163	•
Offer	400	113	*16	•••	•••	8,908	5,710	
				Total	***	22,449	15,873	•

Classifying the total number of persons that were registered in 1895 from all parts of India for emigration to the colonies according to place of birth, 58 per cent. were natives of the North-Western Provinces and 32 per cent. natives of Oudh, against $50\frac{1}{2}$ per cent. and 33 per cent., respectively, in the previous year.

The following table shows the number of natives of each district who were registered as emigrants:—

_

	Total		2,207	2,054	438	941	1,342	1,377	1,479	9,838

4.—Dispensaries.

The period under report was one of rapid progress, as appears from the table subjoined, in which the more important figures relating to civil hospitals and dispensaries for 1895 are compared with those for 1892:—

	hospit	Number of civil hospitals and dispensaries.		Number of patients.		Income from subscriptions.			_
Year.	Total.	Reserved for women.	Out-door.	In-door.	Number of beds.	For general hospitals and dispensaries.	For women's hos- pitals and dis- pensarios.	Invested capital.	Total ex- pendi- ture.
						Rs.	Rs.	Rs.	Rs.
1892	289	27	3,376,125	56,226	3,158	76,099	1,52,739	10,76,600	7,28,352
1895	815	38	3,955,681	61,514	3,473	1,20,495	25,643	12,33,000	7,55,252
Increase	26	11	579,556	5,288	315	44,396		1,56,400	26,900
Decrease				•••	•••	•••	1,27,096		1=4

These figures are for the dispensaries for which detailed statistics are returned. The 315 dispensaries comprised two State (Class I), 263 district board (Class II), 22 private (III-A), and 28 State-aided (III-B) institutions.

The 28 new hospitals and dispensaries reported to have been established during 1893-95 are classified as follows:—

						General.	For women
Under distri	ct boards	•••	***	***	•••	13	3 ,
Private		•••	•••	•••		8	2
State-sided	***	***		***	•••	1	6

Much, moreover, was done in extending and improving existing buildings. Among general hospitals the most important work undertaken was the Crosthwaite Hospital at Naini Tal for natives. It was necessitated by the reluctance of native patients to resort to the Ramsay Hospital, which they found inconveniently distant from the bazár and the private contributions towards its construction, amounting to Rs. 38,298, were mainly obtained from native gentlemen. The Crosthwaite Hospital; was not opened till after the close of the period under report.

The following figures show that in the course of nine years the total number of persons in receipt of medical relief almost doubled:—

Year.	•	Nun	nber of patients treated.	Increase.	
1886	***	444	2,109,478		
1889	•••	***	2,640,093	530,615 or 25 per cent. (on 1886)).
1892	•••	•••	3,432,351	792,258 ,, 30 ditto (,, 1889	
1895	•••	•••	4,017,195	584,844 ,, 17 ditto (,, 1892)).

In this comparison it may be observed that the year 1892 was a very unhealthy year, and the year 1895 a healthy one. That there should be an increase of 17 per cent. is, under the circumstances, indicative of the growing popularity of our dispensaries. If the comparison be made between the two triennial periods 1889—92 and 1892—95, the increase in the latter of the two periods over the former is found to be 24 per cent.

It is noticeable that while the number of general hospitals and dispensaries increased during the past nine years from 226 to 277, that is by 22 per cent., the number of patients annually treated at them rose from 2,109,478 to 3,698,849, i.e. by 1,589,371, or 75 per cent. The distribution of these patients among men, women, and children is exhibited in the following figures:—

Year.				Men.	Women.	Children.
1886	•••	•••	•••	1,212,142	383,241	514,095
1889	•••	•••		1,496,074	513,254	630,765
1892	***	•••		1,899,784	603,502	839,065
1895	***	***	•••	2,178,491	774,180	1 004.591

It is an interesting fact that between 1892 and 1895 the increase was most marked in respect of children. It would seem that the movement for improving the medical relief of women indirectly extended its benefits to children, and is only natural to suppose that as the women of India learn to appreciate the advantage of medical aid to themselves, they will be more anxious than in the past to secure it also for their children.

It may be noticed that the above figures do not include patients treated in the 38 hospitals and dispensaries specially reserved for women, none of which were in existence nine years ago. In 1895 these institutions supplied relief to 250 men, 188,677 women, and 129,419 children, or a total of 318,846 in all.

In spite of the fact that Hindus form 86 per cent. of the total population of these Provinces, the number of Hindus res 2 ting to the hospitals and dispensaries, whether

general or reserved for women, continued to be only about twice the number of Muhammadans. This is one of several indications that the hospitals and dispensaries already in existence were not utilized to anything approaching their full capabilities by large classes, owing to ignorance and prejudice. As these sentiments lose their force, the return of patients will annually increase even without additions to the present number of medical institutions.

The number of in-door patients treated in 1895 was 9.4 per cent. in excess of the number treated in 1892. The figures for 1895 are as follows:—

				Daily average numbe of in-door patients.	
Men	***	•••		1,716	2,363
Women	•••	•••	•••	618	1,110
Children		•••	•••	204 (I	ncluded in the above.)

The daily average number of males (excluding children) in general hospitals and dispensaries was 72 per cent. of the beds available for their use and of females 55 per cent.; while in hospitals reserved for women the percentage for women was 67, which closely approximated to that for men and indicated a marked preference for entirely separate accommodation and treatment.

In some cases the nominal accommodation was much less than the regular demands on it, and appeared to urgently require enlargement. The following are among the most striking instances:—

	Name of hospital or dispensary.			Sex of patients.		Number of beds available.	Daily average number of in- door patients (excluding children).
(1)	Allahabad Colvin Hospital	***	***	Men		40	48 61
(2)	Ditto Dufferin Hospital	***	•••	Women	***	24	27:90
(3)	Azamgarh Hospital and Dispensar	r y	,	Do.		6	8:18
	Bareilly ditto	,	***	Men	•••	61	73-33
• •	Khurja Dispensary (Bulandshahr	district)		(Do. Women	•••	19 8	. 24-88 10:78
(6)	Ghazipur Hospital and Dispensary	* ***	•••	Men	•••	26	31:13
	Moradabad ditto	***		Do.		18	40 00
(8)	Ditto Female Dispensary			Women	,	12	14 46
	Sitapur Hospital and Dispensary	•••	•••	Men	•••	27	35 05
(10)	Gonda, Balrampur Maharaja's Fer	nale Dispo	onsary,	Women	•••	6	8.48

Numbers (1), (2), and (9) had already reached the limit of their nominal accommodation in 1892, while Nos. (3), (4), and (7) then, as in the year under report, largely exceeded it. The Government expressed a hope that the managers of these institutions would see their way to make the accommodation correspond more closely with the demands upon it.

The Lieutenant-Governor and Chief Commissioner agreed, as to the necessity for providing accommodation for European and Eurasian patients in Lucknow with the Inspector-General of Civil Hospitals who brought this matter to the notice of the Government. It was hoped that it will be possible to make the requisite provision in the King's Hospital.

With the increase in patients there was an increase of 5,306, or 21.8 per cent. in

District.	Number of major operations performed in 1895.	Number of major operations performed in 1982.
Bonares Gorakhpur Gouda Shéhjahénpur Moradabad	1,708 1,217 1,199 834	1,104 1,041 604 (Under 400) 690

major operations, the number for 1895 being 29,607 as against 24,301 in 1892. In the marginally-named districts, which were also among those which showed the greatest improvement in regard to the total number of patients treated, there were large increases in the number of major operations performed. The acknowledgments of the Government

were conveyed to Surgeon-Major Anderson, who, with 1,124 operations, again headed the list of Civil Surgeons who have performed a large number of major operations By his transfer from these Provinces the Government lost for a time the services of an officer who had distinguished himself both in administrative and strictly professional work. The Lieutenant-Governor and Chief Commissioner noticed with pleasure the skill and success of three Lady Doctors. No less than 15,175, or 51.3 per cent. of the total number of major operations were performed by Assistant Surgeons.

Ten thousand five hundred and sixty-five cataract operations (84 per cent. successful) were performed in 1895 as against 8,880 (82.5 per cent. successful) in 1892, the increase being 1,685, or 18.9 per cent.

One hundred persons (32 being children) were treated for accidents caused by sugarcane mills: two of the children died and two were discharged unrelieved. There was, however, a decrease of 10 on the number of cases in 1894. The inquiries made by Commissioners during the cold weather showed that the mills were in almost all cases properly protected, and that accidents to children were rare. Under these circumstances the Lieutenant-Governor and Chief Commissioner, while desiring that District Officers should continue to insist on all proper precautions being taken, decided that the matter did not call for legislative interference.

The general results obtained on the whole number of major operations performed were almost identical with those of 1892:—

			Percentage cured.	Relieved.	Discharged otherwise.	Died.
1895	***	***	82.6	11.1	49	1.4
1892	***		81.1	12.3	5.1	1.5

Minor operations increased from 141,094 in 1892 to 161,949 in 1895, i.e. by 20,855, or 14 per cent. The total number for the tricinial period 1893-95 was 455,561 as against 393,102 for 1890-92, the increase being 15 per cent. It may be noted as an interesting fact that the rate of increase under this head was much less than the rate of increase during the same period in the total number of patients treated (24 per cent.)

There was little variation in the precentages of persons under treatment for par-

					ticular diseases. The Inspector-General of
				centage of per- na treated for	Civil Hospitals remarked that during the
Year,			Toa	latial fevers to	last three years the proportion of patients
			τοι	tal number of patients.	treated for malarial fevers steadily declined.

to res	ort mo	re frequent	ly to	the dispensari	les in cases of petty ailments is likely to alter

the ratios between particular diseases.

The Government noticed with regret that accurate returns were not available regard-

The Government noticed with regret that accurate returns were not available regarding the distribution of quinine and einchona febrifuge in certain districts where malarial fevers are specially prevalent. The experiment, which is proving a success in Bengal, of distributing pice packets of quinine through the post-offices was being tried, and the Government directed that its progress should be carefully watched and noticed in the next triennial report.

With regard to the question of the sufficiency or otherwise of the medical relief given by each district, it appeared that some had not shared in the general progress, and

others were still far behind what may fairly be required of them. The following table shows the position of each district in this matter:—

101					Number of dis-	Number of	Percent age to	Diffe	rence.

In the Aligarh district, through the efforts of the Collector and the Civil Surgeon, four dispensaries were built in the past three years, and the number of patients treated rose by 54 per cent. Such instances show how much can be effected by the skill and energy of individual Medical and District Officers. But dispensaries cannot be established without the active co-operation of district boards, and the Lieutenant-Governor and Chief Commissioner recommended the above table to their earnest consideration, particularly as regards some of the backward districts in Oudh and the eastern portion of the North-Western Provinces.

The income and expenditure during the year 1895 are compared below with the figures for 1892:—

gui	65 101 1002	Inc	OME.	1		EXPEN	DITURE.

•	Total	9,25,833	9,82,366	GRAND TOTAL	***	9,25,834	9,82,366

The amount shown as received from "local funds" in 1895 represents charges met from this source by district boards for construction and repairs of dispensaries and for other dispensary purposes which under the strict letter of the dispensary rules should be met from subscriptions or endowments. A greater increase might have been expected in municipal contributions in view of the failure of some sadar dispensaries to obtain the guaranteed minimum income. The increase in investments was mainly due to donations to women's hospitals. The income from "other sources" included large sums on account of sales of securities and contributions from the Dufferin and other funds. The following table shows the receipts from private subscriptions during the past six years:—

Year.]	For general hospitals, &c.	For hospitals, &c., for women.
					Rs.	$\mathbf{R}_{\mathbf{S}}$.
1830	114	•••		**1	63,563	3,651
1891	•••	• * •		***	66,877	16,116
1892		• • •	•••		76,099	1,52,789
1893		•••		•••	1,07,026	1,18,445
1894	•••	***	•••		84,151	39,940
1895	•••	•••	•••	•••	1,20,495	25,643

The income from this source is naturally extremely fluctuating. The subscriptions for general hospitals were apparently swollen in 1893 by special donations amounting to about Rs. 20,000, and again in 1895 by the gift of Rs. 30,000 from the Rája of Balrámpur. Apart from these, however, a progressive increase is observable in what may be considered normal subscriptions. It is satisfactory to note that this tendency proceeded unchecked during the period in which the demands on private liberality made by the movement for providing better medical aid for women were at their maximum.

There was still, however, much need for improvement in this source of income. Comment has already been made on the desirability of establishing additional dispensaries in certain districts, and there were other districts in which existing dispensaries were not on a thoroughly satisfactory footing. In many instances in the year under report the local guaranteed income was not obtained, and grants aggregating Rs. 32,255 were required to meet the deficit on this account. The attention of district boards was called to this point during the year, and in some cases successful efforts were made to meet the deficiency by further contributions from private and municipal sources. But from almost half the district boards no satisfactory assurances had yet been received by the close of the year. The measures which the Lieutenant-Governor has in contemplation for improving the financial position and increasing the powers and the independence of the District Boards will give them a freer hand in dealing with dispensary funds, and in supplementing such special funds from district revenues. But they will find it none the less necessary to appeal to private liberality in support of local hospitals and dispensaries, as the revenues placed at their disposal will certainly not be so large as to allow them to dispense with such aid without crippling their activities in other and equally useful directions.

An increase in subscriptions was also urgently required to meet the growing demand for European medicines. The Lieutenant-Governor and Chief Commissioner noticed with regret the decline in expenditure under this head from Rs. 62,995 in 1892 to Rs 56,444 in 1895. When regard is had to the enormous increase in patients during this period, it is obvious that the want of funds must have been acutely felt in this respect, and that, if it continues, it will constitute a serious obstacle to improvement in the future. This, again, is a matter which must be left to district boards and the Government trusted that they would not allow the work of their dispensaries and hospitals to be crippled through failure to provide them with necessary medicines and appliances.

The leading figures in connection with special female hospitals have already been given. It would appear that as much had been done by the Provincial Branch

of the National Association in the way of providing hospital buildings as was immediately required. Some considerable falling off in subscriptions was expected by the Association, as the liberal contributions of 1892 and 1893 were the result of special efforts largely directed to providing the new hospitals with the invested funds required for their permanent maintenance. A hope was expressed to the effect that interest on these investments (amounting to Rs. 12,566 per annum) and the regular annual subscriptions would suffice for this purpose. The Provincial Committee, however, required an additional income of Rs. 7,000 per annum to enable them to carry on the educational work of the Association and the women's hospitals and dispensaries at Agra. Having regard to the fact that no part of the scheme of the National Association is more important than the education and training of female medical practitioners, who alone can, hope to gain access on a large scale behind the parda, it was regarded by the Government as specially important that some means should be devised by the Provincial Committee of the fund to raise this income.

Another great difficulty the Provincial Committee had also to meet was the difficulty of obtaining native ladies who could be trained into competent Assistant Surgeons and Hospital Assistants. As was stated in the review of the report for 1892, this was due to the almost entire absence of female education in these Provinces. The Crosthwaite School has been opened at Lucknow to meet this deficiency, and promises to be successful in obtaining as pupils Hindu and Muhammadan girls of good position; and the Provincial Committee offer scholarships for the education of girls who will subsequently proceed to the Agra Medical School. The school, however, is in want of funds—a want which will be temporarily relieved by the payment of the munificent contribution of Rs. 40,000 promised by His Highness the Nawab of Rampur. More, however, remains to be done, and the matter is still engaging the attention of the Government. But the results of these measures will not be realized for some years to come, and till then the movement for providing medical relief to women cannot be expected to reach its full development. Meanwhile it is satisfactory to note that the later reports of the local branches of the Association showed an increasing popularity, among parda-nashin ladies, of the hospitals in which it had been found possible to put a Lady Doctor in charge, and especially a wider field of private practic opening out before such Lady Doctors.

In the foregoing paragraphs no reference has been made to the work done by certain special or private agencies as tabulated below:—

[•] Among private dispensaries the Allahabad Eye Hospital, at which, in 1895, 3,475 patients were treated and 561 operations for cataract performed, is noteworthy as being the only hospital in the Provinces entirely devoted to a special class of

disease. Its inception was due to Surgeon-Lieutenant-Colonel Hall, late Superintendent of the Allahabad Central Jail and now Inspector-General of Prisons; and its present commodious quarters to the liberality of Lála Ram Charan Das, Rác Bahádur, of Allahabad. Sir Autony MacDonnell trusted that the usefulness and popularity of the hospital would be maintained in spite of the serious loss it has sustained through Sargson-Lieutenant-Colonel Hall's translation from the management to the appointment of Inspector-General of Prisons.

Agra Medical School.

The numbers of male students in each class are exhibited in the table annexed:—

				Mali	tary.	Ci	vil.	Rájpi	ıtána.	l rivate.		Total.

The total number of students exceeded the average number under tuition for the last five years, which amounted to 175; and also exceeded the maximum of 200 contemplated by the rules. The excess was due, in large measure, to the numerous admissions, amounting to 62, to the Civil Class in 1894-95 for the purpose of supplying exceptional vacancies among Hospital Assistants.

This was the first year in which effect was given to paragraph 4A of the Rules, as added by Notification No. $\frac{82}{V-66}$, dated the 21st March 1895. The direct result of this rule, under which candidates are not ordinarily eligible unless they are recommended by the Director of Public Instruction, was to materially improve the status and qualifications of students entering the College.

The results of three years' working may thus be tabulated for purposes of comparison:—

			57	nber		Sum	Lon		vera			verag		3.5	ırime		123	Ferce ars t	ntage the	ofar	erage	•-

^{*} Marks reduced to 600 for purposes of comparison.

In the final examination for the senior class (Class I) the failures were more numerous than in either of the two preceding years, though 50 students completely passed. The second year's class (Class III) was promising, as all but four students passed the examination. The average marks obtained by all the classes compared favourably with the figures for 1894-95. It was again necessary to enforce the excellent rule to the effect that students failing to qualify would not be promoted to a higher class. There was some deterioration in the average number of marks obtained by the Military and the Civil pupils in Class II, of which the detailed working may be summarized as follows:—

				Nua	iber in cl	AS9.	Average	number of m	arks.
	Description of	papiis.		1894.	1895.	1896.	1894.	1895.	1896.
Military Civil Rájputána Private	•••	•••	•••	19 28 3 	30 23 3 9	10 31 3 2	222·1 261·1 263·6	200.6 268.0 208.0 192.7	199 5 255·0 247 6 269·5

The first and second prizes for general proficiency were again awarded to the two Civil pupils standing highest in the Final Examination list with totals of 600 and 587, representing 85.71 and 83.85 per cent. upon a maximum of 700. The first and second pupils of the Military class obtained in the corresponding Final Examination for this class totals of 420 and 419 respectively, representing 84 and 83.8 per cent. upon a possible maximum of 500.

The female student class continued to be chiefly recruited from the Native Christian community. It was noticed with satisfaction that the social status and educational qualifications of the students annually admitted were steadily improving. The general results of three years' working may be thus compared:—

							Aver	age n	narks	Aver	age n	narks	36.		Per	centa; ma	ge of aximu			to

I	7 21	19 6	9	3	12	8	508 265	528 264	501 287	595 	 581	551	800 500	800 800 500 500	63	66 53	63 57	- 74	72	 69
IV	8 11	11 27	22 12	4	8	15 	359 342	359 272					500				55	83	79 	

The difficulty of obtaining suitable pupils from amongst Hindu and Muhammadan girls of good position had not been reduced; but the establishment of the Crosthwaite Girls' School at Lucknow and the stimulus of scholarships offered by the Provincial Committee of the National Association was expected in time to work an improvement.

During the year the Chemical Laboratory was finished, and at its close the Examination Hall was approaching completion. The Principal again urged the necessity of extending the accommodation. An improvement was effected by the construction of a masonry drain between the two hospitals; but the broader questions of boarding accommodation and the construction of an ophthalmic hospital have been necessarily postponed pending an improvement in the provincial finances. The suggestion as to the appointment of another Assistant Surgeon made by the Principal was referred to the Inspector-General of Civil Hospitals for report. Should this

addition be made to the staff, it might then be possible to give effect to the wish of the Government of India that instruction in hygiene and sanitation should form part of the training received by Hospital Assistants, with the view of qualifying them for service in the Sanitation Department.

5.—Lock Hospitals.

Blank.

6.—SANITATION.

The year 1895 was exceptionally healthy, and the death rate was as low as 29:13

			Births per mille.	Deaths per mille.
	l average* — 1890).		39.20	32.79
1891† 1802†	***	•••	93·26 36·17	31·14 34·11
1693† 1894†	104	4	40·95 39 70	24·10 42 51
1895†	***		31.90	29.13

^{*} Calculated on census of 1881—Population, 44,107,869.
† Calculated on census of 1891—Population, 46,905,085.

per mille. The birth rate (34.90) was also low, but this decline was connected with the exceptional unhealthiness of 1894. So low a death rate has been recorded on two occasions only—27.57 in 1883 and 24.10 in 1893—since the census of 1881. The infantile mortality was also exceptionally low. The usual course of the monthly death rate is that it falls during January and February until in the latter month it

reaches the lowest point in the whole year. It then rises rapidly till the middle of May, falls somewhat in June and July, and again rises rapidly till October; in mid-October it is at the maximum, and thence declines rapidly through November and December. The death rate of 1895, however, fell steadily through March, rose slowly through April and May, fell abruptly in June and July, and thence rose without a break in each succeeding month, until in December the maximum for the year was reached. The meteorological features of the year were a cool spring, a short hot weather, a light monsoon setting in early and terminating in September, and exceptional heat and dryness in the last quarter of the year. Thus climatic conditions were excellent until the premature disappearance of the monsoon. From that date they steadily deteriorated, and their effect on the health of the people was aggravated by privation and distress, owing to the partial failure of the rain crops and the bad germination of the cold weather crops.

The births exceeded the deaths of the year, though, as above remarked, the birthrate was low. In 1894, with a comparatively high birth-rate, the deaths exceeded the births. In the first five years of the decennial period reckoned from the census of 1881, the excess of births over deaths gave an increase of 1,678,266 or 3.8 per cent. on the population figures of 1881. In the five years which have now elapsed since the census of 1891 the increase of population is only 923,612 or 1.9 per cent. on the census figures. The birth-rate for the last five years has been below the decennial mean; the death rate for the last five years is about the same as the decennial mean. The retardation of the growth of the population is possibly temporary, but it is a fact of some interest and importance. An examination of the district ratios of births and deaths for 1895 and for the preceding five years enables this retardation to be located with tolerable accuracy. In the western districts, comprising the divisions of Meerut, Agra, and Rohilkhand, the birth rate remains persistently high (over 40 per mille) and is considerably in excess of the death rate. In Oudh the birth rate is lower, but there is still a small increase of births over deaths. In the Allahabad, Gorakhpur, and Benares Divisions the birth rate is markedly lower, and the population in most of the districts according to the returns is at present virtually stationary. The following

figures compare the Rohilkhand Division in this respect with the three eastern divisions of the North-Western Provinces:—

	Rol	hil k band	l Divisio	on.	ž,	A	.llahaba	d Dieisi	ion		Benares and Gorakhpur Divisions.			
Districts.	Birth	-rate-	Death	-rate.	Districts.	Birtl	ı-rate.	Deatl	ı-rate.	Districts.	Birtl	o rate.	Death	-rate.

bijnor	42.83	41 47	39 88	36.19	Cawnpore,	37 29	36 92	25*36	37:17	Gorakhpur	26.15	33.03	25.28	29-97
Moradabad	47.04	46.19	37:61	38 80	Fatehpur,	36.20	37 60	24.71	39.59	Basti	27.62	34.90	34 75	29:32
Bareilly	48:13	44.21	34.08	31.86	Hamírpur.	30.33	40.49	40·S9	38-49	Azamgarh,	21-88	31 42	28 44	31.24
Pilibhít	43 '54	42.13	37.72	32-12	Bánda	26-36	32.03	23 33	33.79	Gházipur,	22 [,] 74	27:51	25.12	27 16
Budaun	43 39	40 75	26.62	27 76	Allababad,	27-20	32.56	21.78	33.17	Ballia	24.82	31 13	20 71	28.04
Sháhjahánpur	44·71	42.88	35'32	36.14	Jalaun	32:37	41.19	28.97	38 79	Benares,	25 52	29.49	32·14	32.07
					Jhánsi	26.66	37:53	35.15	32.51	Mirzapur,	28 83	35 85	26.62	34 01
										Jaunpar,	25.00	33 37	24 62	30-97

In drawing any conclusions from this comparative table, allowance has no doubt to be made for the fact that in the Rohilkhand Division with its large urban population reporting is fuller than in the eastern districts. But as this affects both birth and death statisties, the reported figures in all parts of the Province are a fair gauge of the advance or diminution of the population. A noticeable point in the above comparison is that, whereas in the Rohilkhand Division the birth rate for 1895 shows an improvement on the mean for the previous five years, in the eastern districts the birth rate for 1895 is, almost without exception, lower than the mean. This is very marked in the case of Azamgarh, Gházipur, Ballia, and Jaunpur and that it is connected with the agricultural depression which these congested districts have lately experienced searcely admits of doubt.

The birth and death rates of the different registration circles in each district present as remarkable contrasts as in former years. Thus in Pilibhit the birth rate in 1895 in the rural circles ranged from 33 to 61, and the death rate from 28 to 69. Still more striking examples are to be found in small town circles and in hill circles in Kumaun or the Dún. These latter, for the most part, can be accounted for by exceptional circumstances unconnected with the health of the population. In the Ballia district, the birth rate of the rural circle of Haldharpur was only 12.91 in 1895 against a mean of 25.90 for the previous five years; the death rate was only 16.60 against a mean of 24-35. In two rural circles of Jaunpur the birth rates were 1941 and 18.43 respectively in 1895 against means of 30.94 and 31.97. In three rural circles of Gházipur the birth rates were 14.61, 16.27, and 16.62 respectively in 1895 against means of 26·26, 24·44, and 23·40. These instances were quoted as showing the necessity of the returns being studied and utilized by the local authorities in each district with the double object of checking and improving the reporting of births and deaths, and of discovering the existence of causes affecting to an exceptional degree the health of the inhabitants of a particular registration unit.

The birth and death rates for the population within municipal areas, aggregating

1891 1892	Birth-rate. 33·26 34 94	Death-raic. 31·14 34 82	3,138,742 persons, for the last five years are shown in the margin. For the last three years
1893	40 61	29.78	the birth rate has remained remarkably con-
1894	··· 39 62	48 37	stant.
1895	89 37	34 83	SKIT II

The number of cases in which the cause of death was verified by professional agency was less than in 1894, being 9,482 against 14,660. The information

which is thus being collected should in time throw considerable light on the chief causes of Indian mortality.

Twenty-one per cent. of the births and 20 per cent. of the deaths registered in 1895 were tested by local authorities and the Vaccination Department. In the testing done by the local authorities the percentage of omission works out for the province at 2.78 per cent. in the ease of births and 2.64 per cent. in the case of deaths. In the testing done by the Vaccination Department the percentages are 1.46 and .72 respectively for births and deaths. The testing of the Vaccination Department would seem from these figures to be perfunctory. In the Meerut district the percentage of omissions on 3,623 births tested by the local authorities was 5.22, and on 2,697 deaths so tested 6.04. In the same district the vaccination staff tested 10,417 births and 7,798 deaths, and found omissions to be only 2.15 per cent. and .47 per cent. respectively, The results of the two sets of testing were equally discrepant in Bulandshahr, Mainpuri, Basti, and other districts. It is probable that many of the omissions were due to exceptional circumstances, such as the removal or death of a village watchman and the temporary vacation of his office, or the appointment of a new man who had still to acquaint himself with the village.

Though the returns showed that registration of births and deaths in these provinces was still capable of improvement, the Deputy Sanitary Commissioner and the Sanitary Commissioner considered that omissions were less frequent than formerly and than might be expected. The population, as was remarked, was close on 47 millions, and the area over 100,000 square miles. The Sanitary Commissioner stated that "the collection of statistics for this vast area and population is carried on by the village watchmen, the only method possible with any regard to reasonable economy, and upon the whole is wonderfully well performed. Probably it is one of the most efficient reporting agencies, at the price, in the world." In this the Government fully concurred.

The history of the chief diseases of the year shows that the provinces enjoyed almost complete immunity from small-pox. Only 1,968 deaths from this disease were reported, giving a ratio of '04 per mille. This is the lowest rate recorded in these provinces. The disease has periods of advance and retrocession, but the small-pox death rates for the past 25 years show unmistakably that each successive epidemic wave advances less and recedes farther than its predecessor. Deaths from cholera amounted to 51,562, giving a death rate of 1·10 per mille compared with 3·80 in 1894 and ·26 in 1893. The disease prevailed in an epidemic form in the Fyzabad and adjoining districts in the early part of the year, and in Hamírpur in the rains. The Kumaun Division was absolutely free from it, as were also the Hardwár and Mágh Mela Fairs. Of the large towns in the provinces, Agra had only 1 ease, Allahabad 18, Lucknow 21, Cawnpore 111, and Benares 231.

There was satisfactory progress towards the completion of the large water-supply and drainage projects in Allahabad, Agra, Benares, Cawnpore, and Lucknow. The water-supply in all these towns is ample for all purposes, and the quality satisfactory. The extension of the systems to outlying quarters of the towns, the increase of house connections, and the improvement of the surface drainage works in order to deal with an augmented volume of water, are matters which will engage attention and necessitate expenditure for some time to come. In Meerut the water-supply scheme has been satisfactorily completed. It is the least expensive of all the large water supply systems in the provinces. The capital outlay is only eight lakhs, and by substituting turbines for steam-power and other economies, the annual charges for maintenance, interest, and sinking fund have been kept within the moderate sum of Rs. 70,000. Vater-supply projects for the two large towns of Fyzabad and Bareilly were prepared uring the year, but in both cases financial difficulties have as yet prevented further rogress. A drainage and water-supply project for the town of Farukhabad has also en under discussion, as a sanitary survey showed that the existing water-supply was id, the drainage very imperfect, and the death rate high. The town, however, is sither rich nor progressing, and the municipal authorities represented that they ere unable to finance the complete scheme in its present form.

The number of minor sanitary works undertaken in towns and municipalities was The 103 municipal boards in the provinces with an aggregate income of 55 lakhs expended over 21 lakhs on water-supply, drainage, conservancy, markets, and slaughter-houses. The figures include loan receipts and expenditure from loans. The expenditure on sanitary objects was thus considerable. The Sanitary Commissioner stated, as the result of an experience of 13 years, that " far less money is spent on well intentioned but often misdirected efforts than formerly," and that " most improvements are now made on recognised scientific sanitary lines." The creation of the office of Provincial Sanitary Engineer and of the Provincial Sanitary Board have undoubtedly contributed to this result. The Board has been lately recast, and its executive powers strengthened for the furtherance of the same object. The Board is so constituted as to discharge competently the duty of a central supervising and regulating authority in all sanitary matters. It will ensure that sanitary enthusiasm is not pushed in one place to extremes, and that absolute inertness in another place does not reign supreme. It will bring large experience to bear on local problems, maintain a steady advance on true principles, and will cheek the waste of time and money that has often attended inexperienced attempts at sanitary reform.

The diversity of methods for the disposal of night-soil which prevailed in large towns having attracted notice, it was decided that the Sanitary Board should be asked to have a manual of instructions on the subject drawn up for translation and circulation to municipal boards.

The death rates have not substantially declined since the introduction of an improved water-supply in the towns above mentioned. But the comparison is disturbed by the occurrence of unusually healthy and unhealthy years in rapid succession, and apart from this in no town has it been yet found possible to completely close the old and impure sources of supply, while the Sanitary Commissioner remarked that it was probable that in no town in these provinces did more than 75 per cent. of the inhabitants use filtered water. There was a distinct improvement in the public health of large areas in the canal districts of the Meerut Division which had been extensively drained by the Irrigation Department. The improvement was very perceptible in the Meerut, Aligarh, and Bulandshahr districts. It may be noted, as evidence of the improved health of these districts, that the birth rate in them was about the highest in the province, and the death rate well below the provincial average.

The Lieutenant-Governor and Chief Commissioner considered that the area was too vast and the existing agency too small to expect immediate and rapid progress in rural sanitation, and in the orders which he issued on the subject he laid down the principle that improvements should be chiefly aimed at which are modest in scope and which for the most part are within the ability of village communities to execute for themselves. But within these limits he considered there was much room for beneficial action. It was laid down that the first necessity was accurate registration of mortuary and vital statistics in small homogeneous areas, as the basis of a district sanitary survey. The second was an efficient district staff of sanitary inspectors, qualified to report on the sanitary state of towns and villages, and to supervise simple works of improvement. The third was the provision of funds from local rates and otherwise for aiding the execution of such improvements. And the fourth was the sustained and well directed impulse in the right direction which the Sanitary Board would give. The sanitary improvement of villages was considered to be a legitimate and useful famine relief work.

Mortality caused by wild animals and snakes.

There was an increase on the figures of the preceding year in the number of deaths both of men and cattle. At the same time there was an increase in the number

\mathbf{of}	animals	and	snakes	destroyed,	and	in	the total	amount	\mathbf{p} aid	in rewards.	\mathbf{The}
tot	als are co	mpar	ed belov	v :

							Rs.	a.	p.	Rs.	8.	р.	
1894	279	5,689	5,724	236	2,178	14,829	6,831	4	0	86	6	0	
1895	530	6,297	6,079	184	2,300	16,387	7,783	8	0	809	4	6	

In spite of the successful measures taken against them, wolves, as usual, proved most destructive to human life. They claimed 246 victims out of the total number of persons killed, or 140 above the casualties of the previous year. In the Rohilkhand Division, notwithstanding that a large number of these creatures were destroyed, 98 deaths were ascribed to them as against 6 only in 1894. Of this number, 39 were reported from the Bareilly district alone and 32 from Budaun, mostly of young children under three years of age. It was also reported that the numerous deaths are due to a large increase in the number of wolves in the bhur country and khadir, where thick high grass and the ravines afford them excellent cover. The Government has recently sanctioned the grant of a higher scale of rewards, which may be expected to produce good results. In the Meerut Division also there was a noticeable increase in the casualties attributable to these animals-74 against 46 in the previous year; but only 83 of these animals were destroyed as against 133 in 1894. The decrease has been attributed to the expiry of the period during which the increased rates of rewards were to be given; but it is hoped that, with the revival of these rates, which has been recently sanctioned, a greater number will be destroyed.

The number of deaths caused by tigers was also in excess of the number recorded in the previous year, 40 against 16. The largest number occurred in the Kumaun Division, but most of the victims there were attacked by a man-eating tiger, which has since been destroyed. A man-eating leopard, which had caused several deaths, was also killed.

The number of persons killed by "other animals" also increased from 127 in the previous year to 209 in the year under review; and of these 153 deaths were attributed to jackals, 43 being reported from the Gorakhpur Division, 33 from Fyzabad, 24 from Lucknow, and 20 from Allahabad. Of the remaining 56 deaths, 30 were attributed to crocodiles and alligators, and 17 to wild boars.

Among the wild animals which are destructive to cattle, leopards take the first place and are followed at a long interval by tigers and wolves, the number of deaths due to each having been leopards (4,299), tigers (1,044), and wolves (228). The greatest loss occurred in the Kumann and Allahabad Divisions; but in these two divisions the numbers of tigers and leopards killed were 31 and 343, respectively, against 27 and 263 in the previous year, while in the Meerut, Rohilkhand, and Fyzabad Divisions no less than 35 tigers and 92 leopards were destroyed. The number of bears destroyed in Kumann were 176 less than in the previous year. The total number of wild animals destroyed was greater than in the previous year, and there was a corresponding increase in the amount paid in rewards.

Reported deaths from snake-bite rose from 5,689 to 6,297, and the number of snakes destroyed increased from 14,829 to 16,387, while rewards for their destruction increased from Rs. 36-6-0 to Rs. 309-4-6. The largest number of snakes destroyed in any division was in Meerut (3,930); while in Gházipur, Ballia, Rae Barcli, Sitapur, Budaun, Fyzabad, Sultánpur, Meerut, Muzaffarnagar, Farukhabad, and Basti not a single snake was reported to have been killed. The absence of rewards doubtless checks the reporting of snakes destroyed.

Continued attention was paid to the removal of jungle undergrowth and rubbish. Various municipalities contributed sums towards this object, and the clearing of village sites by the zamíndars and other residents was encouraged.

7.—VACCINATION.

The last three years have been years of considerable progress and activity. In 1893 the executive control of the vaccination staff in each district was transferred to Civil Surgeons, and arrangements were made which enabled them, with some few exceptions, to tour in their respective districts and inspect the work of the vaccinators. The measure permitted the Government to abolish one of the three Deputy Sanitary Commissionerships, and the three Vaccination Circles were redistributed into two. This accession of strength to the Vaccination Department is stated to have been most beneficial, and the statistics of work unquestionably show a great improvement. For the three years ending the 31st March 1893 the average number of vaccinations performed a year was 1,053,756: for the three years which have just expired it is The average number of successful primary vaccinations was 886,698 a year for 1890—93, and 1,245,074 a year for 1893—96. The increase of successful primary vaccinations during the triennial period under report is thus 40 per cent. If the last year of this period be compared with 1890-91, the first year of the preceding triennial period, the increase is 55 per cent. The expenditure on vaccination has slightly decreased during the period, owing to the reduction of one of the Deputy Sanitary Commissionerships.

The figures in the margin show that in the decade 1886-96 the number of suc-

Year.	Successful primary vac- einations in each year ending 31st March.	Persons successfully vaccinated per 1,000 of the population.	Deaths from small-pox in each calen- dar year.	Ratio of deaths from small-you per 1,000 of the population.
			0.400	-19
1886-87	607,220	13 77	8,492	
1887-88	648,969	14 GO	25,000	•56
1888-89	648,604	1470	48,243	1.09
1889-90	692,943	15 71	55,394	1.26
-000 OT	828,031	18.77	26,355	•56

1895-96	1,299,663	27 71	*	*

cessful primary vaccinations annually performed in the provinces, exclusive of the Native State of Tehri-Garhwal, has more than doubled. The ratio of persons successfully vaccinated per mille of the population has risen from 13.77 in 1886-87 to 27.71 in 1895-96. The

mortality from small-pox during the period has varied from 1.26 per mille in 1890 to .04 per mille in 1895. The latter ratio is the lowest on record in these provinces. It is impossible to expect that the complete immunity from small-pox which the provinces enjoyed in 1895 will continue, as the disease has its periods of advance and retrogression, a large proportion of the population is in most districts still unprotected, and in no district are revaccinations, by which alone is protection made really effective, numerous. But, from a study of the small-pox death rate for each year from 1876 to 1895 it may be reasonably inferred that such epidemies as occurred in 1878 and 1883-84, when the deaths amounted to 45 per mille of the total population of the provinces, are things of

District.	Ratio of pers	Ratio of persons successfully vaccinated per 1,000 of population.

the past. Turning to the district figures the greatest progress is observable in Oudh. In 1885-86 vaccination in that Province was very backward. In 1890-91 popular prejudices had been overcome in two or three of the 12 Oudh districts, but the Provinces as a whole was, in this matter, very far be hind the

North-Western Provinces. A marked improvement has now taken place, and in the Lucknow Division the ratio of successful vaccinations to the total population considerably exceeded the provincial ratio and was in excess of the birth rate. In the Fyzabad Division there was room for further improvement, especially in Sultánpur, Bahraich, and Gonda. Outside Oudh the districts in which vaccination was most backward are the three districts of the Gorakhpur Division, the five districts of the Benares

District.	Ratio of persons successfully vaccinated per 1,000 of the population.

Division, and the two districts of Allahabad and Jhánsi. The division where it was best established was that of Meerut. In Gorakhpur and Basti, after some improvement, matters again slipped back and the ratio of persons vaccinated was much below the birth rate. In Azamgarh it was also much below the birth rate. In the Benares Division there was considerable improvement.

In the important district of Allahabad the figures were very unsatisfactory, and the attention of the District Board was directed to the matter. In this district the number of persons vaccinated per vaccinator in 1895-96 was only 1,248 against the provincial average of 1,753, so that there was no excuse on the ground of an insufficient staff. In some of the Oudh districts and some districts in the Gorakhpur and Benarcs Divisions the work done by each vaccinator compared favourably with the provincial average, and as vaccination becomes more popular some increase in the staff in these densely crowded districts may have to be provided by district boards.

The ultimate aim of the Department is to secure the vaccination of every child in the provinces within twelve months of its birth. To secure this the number of children annually vaccinated should not be less than 80 per cent. of the births of the year, the difference roughly representing infantile mortality. The statistics show that in 1895-96 the number of successful primary vaccinations was 79.76 per cent. of the total births. This is a closer approximation to the birth rate than has ever before been attained. But it must be noted, in partial explanation of this satisfactory result, that the birth rate in 1895, was very much lower than that for the two preceding years. It has also to be noted that, owing to the leeway which the Department has still to make up in

						1				
Cirele.			Successful primary vaccinations in 1895.96.							
		Births in 1895.	Under one	Between one and six years.	Over six years.	Total.				
lst			903,004	429,328	211,265	22,402	662,995			
2nd		•••	734,231	140,674	403,082	99,168	642,924			
	Total		1,637,235	570,002	614,347	121,570	1,305,919			

parts of the Province, notably in the 2nd Circle, only 43 per cent. of the persons vaccinated were children born during the year. The distinction between the two circles in this respect is very remarkable. In the 1st Circle, in most districts of which vac-

cination has long been thoroughly established, few of the adult population are unvaccinated, and infantile vaccination is the rule. In the 2nd Circle infantile vaccination is the exception and vaccination of children oven the age of one year and of adults is the rule. The future progress of the Department in the 2nd Circle will be gauged to a great extent by the increase in infantile vaccination.

No change was made during the triennial period in the method of supplying lymph to the districts for starting vaccination in the beginning of the cold season. Lymph was, as usual, collected during the rains in the higher hills of Kumaun by a special staff of vaccinators and despatched to the plains in September and October. Animal lymph was used to supplement this supply in a few places where local depôts were established, but it loses its efficacy in a few days unless it is preserved in a special medium under skilled supervision. The Lieutenant-Governor and Chief Commissioner hoped to be able to give effect to a scheme submitted by the Superintendent-General for establishing a central depôt in the hills for the preparation of bovine lymph in a form suitable for transport to the plains. Should this succeed, the present special arrangements for the collection of human lymph in the hot weather and the rains by carrying on vaccination operations in the hills could by degrees be dispensed with.

Municipal vaccination showed an improvement in the year under report, the ratio of successful vaccinations per mille of the population within municipal limits being 38.15 against 34.92 in 1894-95.

The average number of persons vaccinated by each municipal vaccinator within municipal limits was only 957. As 2,000 vaccinations is not an excessive outturn of work for a vaccinator, municipal vaccinators have, as a rule, ample time for working in rural areas bordering on municipal limits. Last year the short-sighted policy of some municipalities in refusing to allow their vaccinators to perform work beyond municipal limits was noticed. The figures given above show that such work may be permitted without detriment to the needs of the municipality.

8.—Lunatic Asylums.

The statistics of the asylum population during the year are shown in the following table:—

	on lat 7.1895. (including		Disch	Discharged.		31st	rength.	n bor y day.	d
	Remaining on January 1895	Admitted (includ re-admissions).	Cured.	Transferred to friends, &c.	Died.	Remaining on December 1895.	Daily average strength	Maximum num confined on any	Accommodation.
Bareilly Benares Agra Lucknow	305 274 235 216	61 59 68 71	34 18 33 27	5 10 24 10	14 97 12 20	313 268 234 230	\$10.09 277.08 236.15 227.24	325 283 249 239	422 310 276 278
Total	1,030	259	112	49	. 83	1,045	1,050.51	1,096	1,286
Corresponding figures for 1894.	1,044	254	122	49	96	1,030	1,038.44	1,098	1,286

The daily average strength was 1,050 against 1,038 in the preceding year, the increase being partly due to a smaller death rate. The admissions were only five in excess of the figure for 1894; the discharges of persons cured show a slight decrease. The health of the asylum population was markedly good in Agra and Bareilly, the death-rate being only 50 and 45 per mille respectively. Both these asylums have had a good health record for some years back. The death rate (88 per mille) of the Lucknow Asylum was considerably lower than in 1894 (135 per mille), but the daily average of sick admitted into hospital was large. The mortality in the Benares asylum has always been heavy, and the average of 133 deaths per mille in the year under report is not the highest recorded death rate in this asylum.

In every asylum the accommodation was in excess of the maximum strength of the population throughout the year. In Bareilly the excess accommodation is greatest, and in Benares least.

Details for crimina	l lunatics a	re thus su	ımmarized :

	Total	•••	166	43	24	12	178
Correspo for 189	onding fig 4.	ures	160	39	22	11	166

Of the 173 remaining on 31st December 1895, 97 had not undergone trial, 49 had been tried and acquitted on the ground of insanity, and 27 were prisoners who had become insane while in jail. There were 40 harmless criminal lunatics confined in central jails at the end of the year as compared with 46 at its commencement.

The disparity noticed last year between the number of admissions from districts in which the asylums are situated and the number of admissions from other districts continues, and is noticeable in regard to all four asylums. Twenty-four per cent. of the admissions came from the four districts in which the asylums are situated. The inference is that in those districts the provisions of the Lunatic Asylums Act (XXXV of 1858) are better known and resorted to both by the police and by the relatives of hunatics. It is singular that the two outlying districts of Azamgarh and Sitapur should have each contributed as many as 11 lunatics to the asylums in the year under report.

The various classes of insanity treated during the year, as diagnosed by the officers in charge of the asylums, are summarized in the following table:—

			Mania.	Dementia.	Toxic insanity.	Melancholia.	Epiloptic insanity.	Other forms.	Nat diagnosed.	Total.
	1895	***	663	214	121	111	98	81	1	1,289
Comparative figures for	(1894	•••	660	230	148	91	88	78	3	1,298
figures for	1893		630	234	134	95	81	81	2	1,257
				[}	

It has been observed on former occasions that to designate particular classes of insanity as "toxic" is misleading, and confuses the type with the cause. Proposals to alter the statement with a view to remove this defect are under consideration.

Excluding expenditure on construction and repairs, which amounted to Rs. 9,975, the gross expenses of the four asylums amounted to Rs. 63,344 in 1895, as compared with Rs. 64,814 in 1894. Under the head of "Diet" there was a decrease of Rs. 1,130, owing to the lately introduced system of purchasing grain at harvest time and storing it for the year. The storing accommodation in the Lucknow Asylum is said to be insufficient, but it should be possible to increase it at no great expense. The Superintendent has been asked to give the matter his attention.

The average expenditure per head, excluding buildings and repairs, was Rs. 60-4-0 against Rs. 62-6-0 in 1894. The following table shows that there is great uniformity of expenditure in each asylum.

	*			Establish- ment.	Rations.	Clothing and bedding.	Other charges.	Total.

Deducting earnings by lunatics and contributions from paying patients, the net cost to Government, exclusive of expenditure on construction and repairs, was Rs. 53,534 against Rs. 60,436 in 1894. This satisfactory decrease is due to the earnings of the dairy farm in the Bareilly Asylum. The industrial profits of the four asylums were Rs. 8,938, of which Rs. 6,323 accrued to Bareilly. The dairy has proved a highly profitable industry under Surgeon-Major Anderson's careful management, and besides giving employment to the inmates of the asylum, has been of great use to the garrison and civil station of Bareilly. In the other three asylums there is no improvement either in the number of lunatics employed or in their earnings.

The results of the year were, on the whole, creditable to the Superintendents of the Asylums; but special notice was taken of the management of the Bareilly Asylum, which reflected the greatest credit on Surgeon-Major Anderson.

CHAPTER VII.

INSTRUCTION.

1.—General System of Public Instruction.

(For standard section on above, see pages 273 and 274 of Report for the year ending 31st March 1893.)

2.—EDUCATION.

Last year the Lieutenant-Governor and Chief Commissioner took the opportunity of reviewing the state of public education in these provinces as disclosed by the quinquennial statisties, and indicating the points in which the provinces in this branch of the administration compare unfavourably with other parts of India. It was remarked that the number of children in the North-Western Provinces and Oudh receiving education of the simplest form was, relatively to the population, less than in any other province; that the total expenditure on education from public funds was small relatively to the aggregate provincial and local revenues, and that of this expenditure an undua proportion was devoted to secondary and to English education; that the average cost of each child under instruction was excessive; that the receipts from fees, especially in the case of high schools and colleges, were below the standard prevailing elsewhere; and that the training provided for teachers by means of normal schools was altogether insufficient. To popularize education while making it more economical was suggested as the general principle which should now be followed by the Government and the Department. In pursuance of this policy the Government undertook to increase its grant for primary education to the utmost extent of its financial ability, and an addition of Rs. 75,000 was made for this object in the current Changes have been introduced in the curriculum of Anglo-Vernacular schools to ensure that in all the primary classes the vernacular should be the exclusive language of instruction. The vernacular normal school at Lucknow has been expanded into a training college for English teachers. A commencement has been made to co-ordinate primary industrial schools with the Thomason College of Engineering by appointing the Principal of that College the ex officio Visitor of the Industrial School in Lucknow and other similar institutions, and by sanctioning the formation of special industrial classes in the college to which deserving students from primary industrial schools may proceed. Lastly, steps have been taken, in communication with District Boards, to extend primary education of the simplest character by means of grants-inaid to existing indigenous schools and to persons undertaking to open new schools. It is too carly to judge of the effects of this measure, but its progress will be watched with the greatest interest. If it succeeds, it will do more than anything else to make elementary education popular and to wipe out the reproach of ignorance attaching to these provinces.

The general statistics may be briefly summarized. The total expenditure of the Department of Public Instruction and of schools and colleges recognised by the Department as "public institutions" rose considerably, but the portion of it found from public funds was less than in 1894-95:—

	Direct ox	penditure.	Indi expend		То	tal.	Percentage from each source.	
Sources.	1894-95.	1895-9G.	1894-95.	1895-96.	1894-95.	1895-90.	1894-95.	1895-96.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.		-
Public revenues. Municipal reve-	14,32,281 95,62 0	14,09,448 94,428	5,84,416 7,822	5,22,578 11,250	19,66,697 1,02,942	19,32,026 1,05,678	57·33 3·00	54·38 2·97
naes. Fees Endowments and sabscriptions.	7,13,462 3,52,927	7,72,202 4,80,426	98,005 1,95,990	1,41,158 1,70,804	8, 1,467 5,48,917	9,13,360 6,01,230	23 65 16.00	25 69 16:92
Total	25,94,290	27,06,504	8,35,733	8,45,790	34,30,023	35,52,294	*	.,,

The growth of the fee receipts and of income from private sources are satisfactory features in the above table. The increased expenditure was incurred under the two heads of secondary schools for boys and secondary schools for girls, and in both these directions private enterprise, especially in connection with missionary societies and European education, showed signs of healthy activity. The expenditure on collegiate and primary education remained practically stationary. The number of institutions on account of which the expenditure detailed above was incurred was 4,824 against 4,814 in 1894-95. Notwithstanding the increased expenditure, the number of scholars in average attendance at public institutions slightly decreased.* The falling off is

*	1894-95.	1895-86.
Boys.	No.	No.
Cniversity Secondary Primary Total attendance Direct expenditure, Rs.	 2,595 52,992 150,345 205,932 21,58,104	2,356 52,111 149,807 204,274 22,55,011
Gils. Secondary Primary Total attendance	 2,149 7,420 9,569	2,433 7,996 10,429
Direct expenditure, Rs.	 3,65,370	3,96,231

noticeable under all classes of schools and colleges for boys. The raising of the school fees in colleges and English schools, and the general hardness of the times, appear to be the chief explanation. Whatever may be the cause, the absence of progress is a most regrettable symptom of the small hold the Department of Public Instruction has on the people of these provinces. The improved attendance in both classes of girls schools was satisfactory, but it was chiefly the outcome of missionary effort, and affected but a small and special section of the community.

Last year the question was asked by the Lieutenant-Governor and Chief Commissioner, why the cost of collegiate, secondary, and primary education per scholar was so much higher in these provinces than in Bengal, the Panjab, and the Central Provinces. Mr. Boutflower's inquiries bear out his conclusions that (1) as regards university education, the scarcity of colleges in these provinces staffed with native professors, (2) as regards secondary education, the larger proportion of expensive Anglo-Vernacular Schools, (3) as regards primary education, the absence of private enterprise, are the main reasons of the great disparity. In the case of primary education steps are now being taken by District Boards to draw out and encourage private enterprise. In the case of secondary education, the raising of the school fees in State and aided schools have had much the same effect, judging by the instance of the opening of two new unaided high schools in Barcilly. In the case of university education, the addition of college classes to the unaided Káyasth Páthshálá in Allahabad is an indication of the direction in which private enterprise may be expected to move with a view of supplying a cheaper collegiate education than is procurable in the large Government and aided colleges.

The accession of the Káyasth Páthshálá to the list of Arts Colleges or Collegiate departments raised the number in the North-Western Provinces and Oudh from 15 to 16, of which three were State, six aided, and seven unaided. The average enrolment of scholars in the 16 institutions was only 1,506 for the year against 1,638 in 1894-95. The Officiating Director, after attributing this decrease to the enhancement of the fees, expressed the opinion that this check to higher education would not be lasting. He writes that "the unaided colleges at Agra, Allahabad, and Lucknow, which are free to charge such fees as they think fit, will meet the wants of the poor student in those towns, just as the unaided colleges of Calcutta meet the wants of the poor student of Bengal and supply him with university education for the small sum of Rs. 3 per mensem." This was regarded as in accordance with the object of the Government, which was to maintain a limited number of colleges in the highest state of efficiency as exemplars, and to require the classes which resort to them to make a reasonable contribution towards the necessarily high expenses. Moderately high fees in such colleges were held to stimulate private enterprise in the manner described by Mr. Boutflower.

The experienced Principal of the Agra College testified that the new scale of fees was not beyond the means of the community in general; and he was of opinion that the education provided in return at the best State and aided colleges was intrinsically cheap. At the Agra College, as an instance, only 27 per cent. of the total expenditure was met from the fee-income, and in the State colleges the proportion was even lower.

The falling off in the enrolment in Arts Colleges was accompanied by a decrease

	М.	А.	В	۸.	Intermediate.		
	Candidates. Passed.		Candidates. Passed,		Candidates. Passed.		
1894-95	38	27	270	185	597	209	
1895-96	39	22	251	123	581	238	

in the number of students presenting themselves at the University examinations. The numerous failures in the B. A. examination were attributed by the Director to papers of unusual difficulty in philosophy and English. In the B. A. examination the number of students who elected the A or literary course was still largely in excess of the number electing the B or

science course, being 187 against 64. In the intermediate examination, however, the numbers were more evenly divided, and as the percentages of successes in both examinations were higher in the case of B course candidates, it was anticipated that the tendency to follow it might become stronger. The Muir Central College, Allahabad, was better equipped in staff and appliances for the efficient teaching of science than at any former period; and both the Canning and the Agra College had well furnished students' laboratories.

The efforts of the St. John's College, Agra and of the Mcerut College to increase their hostel accommodation were regarded as creditable to the management. Generally speaking, the colleges in these provinces were not badly off in the matter of hostel accommodation, which was regarded as an essential requisite for the proper control and moral discipline of students resorting to them from a distance.

The attendance at the Sanskrit College, Benares, increased from 327 to 377, and the examination results were satisfactory. For the Acharya Pariksha degree 86 candidates presented themselves, of whom 58 passed. The Officiating Director expressed the opinion that the University might well recognise this degree, even though it is obtained without any knowledge of English.

The following are statistics for Anglo-Vernacular schools for boys:-

		Number	of scholar		Total expendi-	Inci- dence per	Cost to Govern- ment	
	State.	Aided.	Branch.	Unaided.	Total.	ture.	scholar.	per scholar.
						Rs.	Rs.	Rs.
1894-95	 8,269	14,689	3,206	2,204	28,368	7,25 665	26	12
1895-96	 8,084	13,707	2,938	3,117	27,810	7,68,011	28	12

The attendance decreased except in unaided schools, and, as in the similar case of the Arts Colleges, the decrease was attributed to the higher scale of school fees. It was decided that grants-in-aid should be withdrawn from the preparatory section of Municipal Branch Schools, and that, as far as possible, these schools should be merged into the secondary vernacular schools in the several municipalities. The Director was instructed to take up this matter in connection with the municipal boards. The general effect of this policy will be to reduce the number of boys ostensibly learning English, but unable to pursue their studies to a point where the knowledge of the language would become useful, and to set free funds for the promotion of vernacular education.

Turning to the public examinations for which Anglo-Vernacular schools prepare

	Entr	ance.	School	Final.	Middle.		
	Candi- dates.	Passed	Candi- dates.	Passed.	Candi- dates.	Passed.	
1894-95	1,669	503	168	74	2,929	1,206	
1895-96	1,857	534	208	101	2,921	1,028	

their scholars, the results of the Entrance and of the School Final examinations were better than in the preceding year. The larger number of candidates who attempted the Entrance was due to an increase in private candidates from

497 to 680, of whom only 54 passed. Schools sent up virtually the same number as in 1894-95 and passed more. The increase in the number of candidates appearing in the School Final examination and the larger number who passed, was satisfactory. The Lieutenant-Governor noticed with approval that the Cawnpore Agricultural School sent up 12 candidates to this examination, of whom nine passed. The results of the Middle English examination were poor. The number of municipal and aided schools which did not pass 20 per cent. of their candidates was large and illustrated Mr. Boutflower's remarks as to the impolicy of subsidizing small English schools in which the education of the pupils could not be carried so far even as the Middle examination.

The progress made in establishing science and drawing classes was good, though it was considered that until a rational was substituted for a mechanical method of teaching science the educational value of the subject would remain small.

The experiment of starting special classes in Anglo-Vernacular schools for boys who have passed the Middle Vernacular examination from vernacular schools demonstrated by its success the waste of time and teaching power involved by the old system of attempting to teach English to boys who had not been first grounded in the vernacular. The extension of this experiment by means of the scholarship system should go far to satisfy the wishes of those Municipal Boards which maintain small Anglo-Vernacular schools in order to educate half a dozen aspirants for an English education. With the money saved by the fusion of such schools in existing middle vernacular schools the boards could found scholarships which would enable promising boys to ultimately proceed to the district high school.

The more important figures relating to vernacular schools for boys in each district under the management of district boards are abstracted below:—

Educational	livisions,	 Boys of school-go-	Schools.	Scholars on roll.	Number of boys of school-going age per school.	Number of boys at school per mille of boys of school-going age.		Incidence of expenditure per
Meerut Agra Bundelkhand Western Oudh Eastern Oudh Allahatad Beneres Rohilkhand Kumaun Division 1895-96	100 100 100 100 100 100 100 100 100 100	 429,976 387,635 176,632 467,931 505,682 450,107 708,600 427,366 91,611 3,645,540 3,645,540	571 563 349 460 446 545 579 510 163 4,186 4,170	23,062 23,136 11,341 20,829 21,583 21,912 25,547 22,323 5,140 174,883 176,314	753 689 506 1,017 1.134 826 1,224 838 562	53·6 59·6 64·2 44·5 42·6 48·6 36·0 52·2 56·1	Rs. 97,724 96,635 52,980 99,408 81,851 88,856 93,217 94,936 18,616 7,24,313 (Not	As. 4 2 4 2 4 7 4 8 3 8 4 1 3 6 4 3 3 6

The comparative backwardness of the eastern portion of the provinces, con prising the educational divisions of Eastern and Western Oudh and the Benares Division, is evident from this abstract. The abstract does not bring out two other points in which these districts were behind the western half of the province, namely, the comparatively small number of pupils in their schools who have emerged from the lower primary classes, and the comparatively small income derived from school fces. In the Meerut Division Rs. 17,206 was received from this source: in Eastern Oudh only

INSTRUCTION. 181

Rs. 5,734. As such receipts are now placed entirely at the disposal of district boards their development is one means of providing funds for opening new schools. The number of scholars on the rolls in 1895-96 showed a decrease on the figures of the preceding year. Want of funds, siekness, and searcity were the explanations given in most districts. The new policy of extending the grant-in-aid system to vernacular schools should result in an increased school attendance.

Of aided vernacular schools for boys—for the most part missionary schools—there were 61 in existence with a roll of 3,149 scholars. Indigenous schools of the maktab and patshala classes were returned at 1,613 with an attendance of 17,916. Small grants-in-aid are to be made to the best of these schools, in accordance with the new grant-in-aid rules for vernacular schools.

The reorganization of the three normal schools for Allahabad, Agra, and Lucknow was completed during the year, and a good curriculum was laid down for the training of vernacular teachers. Since the close of the year an English department for the training of teachers for Anglo-Vernacular schools has been added to the Lucknow Normal School, and an English practising school opened in connection with it.

Technical education was represented in these provinces by the Law classes attached to eight Arts Colleges, the Agra Medical School, the Thomason College of Enineering, the Agricultural School, Cawnpore, and a few industrial schools at Lucknow and elsewhere. The number of students enrolled in the Law elasses fell from 752 in 1894-95 to 602, though 51 instead of 45 passed the prescribed examinations. A much needed change was made by the University during the year in prescribing that in 1899 and future years only graduates in arts and science would be allowed to proceed to the law degree. The Thomason College of Engineering continued to be controlled by a Committee of Management, of which the Director of Public Instruction was a member. The College in all its departments continued doing good work, and numerous measures to enlarge its sphere of utility were more or less completely carried out. A mechanical apprentice class, and industrial classes in which training is given in special handicrafts, were opened: and the college buildings were enlarged to provide more accommodation. To connect the college with the Lucknow Industrial School, and to bring the latter into line with the general scheme of technical instruction, the Principal of the college was made ex officio visitor of the school, and its reorganization was under consideration. The numbers on the rolls were large, but the instruction was somewhat desultory, and better workshops and drawing rooms were required. The other industrial schools were in connection with various missionary societies.

The chief statistics relating to female education are given in the margin. Classes

I .- Aided Anglo-Fernacular Schools

			I				
	Schools.	Pupils.	Public funds.	Fees.	Other sources.	Total.	
			Rs.	Re.	Rs.	Rg.	
1894-95 1895-96	17 19	1,290 1,521	15.116 14,580	2,322 2,618	45,599 54,826	63,037 72,024	
II.—State Primiry Vernacular Schools.							
1894-95 1895-96	128 127	2,990 2,997	17,262 16,609	22	13	17,262 16,644	
III.—Aided Primary Vernaculor Schools.							
1894-95 1895-96	115 109	4,083 4,585	18,919 17,813	455 577	33,597 39,972	52,971 58,362	

I and III consist of mission schools, and the expenditure which the several societies incurred on them was large. Class II consists of District Boards' Schools. In all three elasses the expenditure from public funds decreased during the year, while the number of scholars increased. It was found necessary to enforce with more stringency the conditions of the grant-in-aid rules, with the result that the sums hitherto received by aided schools for girls were considerably reduced, But even the reduced grants were distinctly liberal, as the standard of education existing in the majority of the schools is very low. The Officiating Director gave it as his opinion that inferences as to the state of female education based on the returns alone would be incorrect, and that much educational work in zananas was being done in the larger towns through the instrumentality of ladies connected with missions. With regard to non-missionary agencies he writes: "The chief obstacle to further progress is not the apathy of the people, but the want of qualified teachers and governesses for private families. The opening of a training class in connection with some well-established European girls' school should be a boon to the native community, as they will have to depend for many years to come on European and Eurasian ladies for the education of their daughters."

The statistics for schools aided under the Code of Regulations for European schools do not differ materially from those for 1894-95. There were 21 aided schools for boys, with 1,741 scholars, and in receipt of grants aggregating Rs. 54,095. The aided schools for girls were 22, with 1,561 scholars, and receiving Rs. 54,192. The average grant per girl scholar somewhat exceeded that earned per boy, the reason being attributed by Mr. Boutflower to "needlework" being a good grant-earning subject in girls' schools.

The Colvin Talúqdárs' School, Luckuow, was well reported on. With the special permission of the committee of management, the sons of one or two native gentlemen in the North-Western Provinces were received in the school.

The experiment was started in the Amroha High School at the instance of the Muhammadan community of allowing religious instruction to be given to the scholars during school hours. The instruction was given in a building separate from the school-house by a teacher entertained for the purpose by the local committee, and it was optional with the parents to allow or refuse to allow their children to attend. The Lieutenant-Governor and Chief Commissioner reserved his opinion as to the success of the experiment, but intimated his willingness to permit it to be tried in any other places where a local committee of Hindus or Muhammadans was prepared to make the needful arrangements.

3.—LITERATURE AND THE PRESS.

(a)-Literature.

Works.

In the English language.—There were 95 publications against 102 and 90 in the two preceding years.

Of these the following were the more important :-

Fiction.

"The curse of the Prophet" and "The Bridal of Death" being a version of one of the old legends of the days of Mahmud Ghaznavi.

History and Geography.

"A Note on the tract of Country south of the River Son in the Mirzapur District, North-Western Provinces."

Law.

"Hard Knots in the Code of Criminal Procedure" explaining the intricacies of the Code of Criminal Procedure.

Miscellaneous.

- " The Directory of Lucknow."
- "Field and Garden Crops of the North-Western Provinces and Oudh, with illustrations, Parts I—III."
 - "A Handbook of Benares" compiled by the Reverend Arthur Parker.
 - " Essays Fin De Siècle" by an (Anglo-Indian) Optimist.

Politics.

" Signs of the Times" compiled by Bishan Narain Dhar of Lucknow.

Religion.

- " The Atmosphere No. 1."
- "Grihastha" being an exposition of Mantrás 1, 2, and 3 of Súkta 30 of the Rigveda relative to the subject of household.
- "The Ramayan of Valmiki" being a metrical translation of the Ramayanu of Valmiki, by Ralph T. H. Griffith, M.A. This is a re-print in one volume of the first edition of Griffith's Translation of the Ramayana, which was published in five volumes and is now out of print.
- "The Hymns of the Atharva-veda," Volume I, being a translation with a popular commentary of Atharva-veda, by Ralph T. H. Griffith, M.A. This is the first attempt to translate the hymns of the Atharva-veda Samhitá in their entirety into a modern language.

Science, Natural and Other.

"Bacteriological Test of the Purity of Water," compiled by E. H. Hankin, M.A., Chemical Examiner and Bacteriologist to the Government, North-Western Provinces and Oudh.

There was an increase in the number of publications on Biography, Fiction, Law, Poetry, Politics, Philosophy, Religion, Science (Mathematical and Mechanical) and Science (Natural and others). The publications on Drama and Voyages and Travels remained the same, while those on Arts, History and Geography, Language, Medicine, and Miscellaneous showed a decrease.

Works in the German language—Gesete der Kraft.

Works in the Urdu language.—There were 560 publications against 623 and 469 in the two preceding years.

The following were the more important works :--

Arts

" Rahnumá-i-Aks" a work on the art of tracing.

Biography.

"Mirát-ul-Kaunain" containing lives of saints of India, and comparing them with those of the contemporary Caliphs of Baghdad and the Muhammadan Kings of India.

Fiction.

- " Ibrat ka pahla hissa," containing the love tale of John and Honoria.
- " Alif Lailai-Nau Manzum, Jill Chaharum," a metrical version of a portion of the Arabian Nights.
- "Mahábhárat Mukammal ba tarz-i-novel," a work de-cribing the Great War (Mahábhárat) in the form of a novel.

History and Geography.

- " Hamla-i-Nádri," a description of the invasion of Nadir.
- " Qamqam-ul-Islam," a description of the War of Syria.
- " Tárikh-ul-Islám," giving a sketch of the history of the Muhammadans.

Law.

- "Mashur-ul-Wuklá," a translation of Harris' Hints on Advocacy.
- "Shahadat Adalat,ke Usúl," a translation of Stephen's Introduction to the Indian
 Egidence Act.
 - " Tamhid-i-Act Shahadat," a translation of Stephen's Law of Evidence.

Medicine.

- " Majmua-i-Tib," describing the treatment of patients according to the English system.
 - "Bustán-ul-Mufradat," a treatise on the Oriental Materia Medica.
 - " Majmua-i-Tib," treating partly of medicine and partly of anatomy.
- "Urdu Tarjuma Nafisi," a translation of the well-known medical work, Nafisi.
 - "Kimia-i-Anasiri," a translation of the medical work, Qarabadin-i-Qadri.

Miscellaneous.

- . "Arbon ki Guzishta tijárat aur Inglistán ki sanat aur hirfat ka Tarikhi hál." giving an account of the ancient trade of the Arabs and of the arts and sciences of England.
 - " Zinda-i-Jawaid," a work on spiritualism.
 - " Zinda-karamát," a work on mesmerism.
 - " Jauhar-i-Ghaib," a work dealing with the principles of foresight.
 - " Guldasta-i-Ryásat," a work on the duties of the native princes.
 - " Majmua-i-Farasnáma," a work on farriery and horsemanship.

Philosophy (including Mental and Morul).

" Kitáb-i-Adab-ul-Hind," a work on the civilities of India.

Religion.

- "Samsam-ul-Islám, Fatah-ush-shám," a translation of a commentary on the stories of Qoran.
- "Islah-ur-Rasúm ba Kalám-ul-Masum," a translation of Muhammadan traditions.
- "Kashful-ghalaq-fi-in nikah-wattalaq," solving the intricacies relating to marriage and divorce among the Muhammadans.
 - " Eksir-i-Azam," a commentary on the Qoran.
- "Shri Ram Krit Mahábhárat Adi Parva and Sabha Parva," being translations of Adi and Sabha Parvas of Mahábhárat respectively.
 - "Ghazwat-i-Haidari," a translation of "Hamla-i-Haidari."

Voyages and Travels.

- "Safarnáma Hazrat Makdum Jahánian-i-Jahángasht Rahmat-ullah," describing the travels of Muhammad the Prophet.
 - " Safarnámá-Hijáz;" a diary of a journey to Hijáz,

There was an increase in the publications on Drama, Fiction, History and Geography, Poetry, Science (Mathematical and Mechanical), and Science (Natural and others). The publications on Biography and Politics remained stationary, while those on Arts, Language, Law, Medicine, Miscellaneous, Philosophy, Religion, and Voyages and Travels showed a decrease.

"Works in the Hindi language.—There were 354 publications against the same number in the preceding year and 306 in the year before. Of these the following were the more important:—

Arts.

- "Rubber Stamp ki Kriti," a work on the manufacture of rubber stamps.

 Biography.
- " Maháráj Chhatrapati Sivaji ka Jivan Charitra," a biography of Sivaji.

 Drama.
- "Othello," a translation of Shakespear's Othello.

History and Geography.

" Mahábhárat," a versified account of the Great War of that name.

Lan

- " Manusmriti Bhásha Dohavali," a metrical translation of the Code of Manu.
- " Shishu Pálan," a work on the bringing up of children.
- "Aushadh Piyush," a work on medicine.

Miscellaneous.

"Hindu Social Reform," a compilation by Bábu Baijnath, B.A., Subordinate Judge, of Agra.

Poetry.

" Rasa Kusumar," a work on rhetoric.

Philosophy (including Mental and Moral).

" Siddhi Manoranjan," containing a philosophical allegory.

Religion.

- " Arjun Gita," a metrical translation of Arjun Gita.
- " Bhaktambu Nidhi," containing lives of the pious Hindus of old.
- " Padma Purán Bhásha Swarga Khand;" a translation of the Swarga part of Padma Puran.

Science (Mathematical and Mechanical).

"Shilp Sarini" is a ready reckoner.

There was an increase in the works on Arts, Biography, History and Geography, Law, Medicine, Philosophy, Religion, Science (Mathematical and Mechanical) and Science (Natural and others); and a decrease in those on Drama, Fiction, Language, Miscellaneous, Poetry, and Politics. There were no publications on Voyages and Travels.

Works in the Sanskrit language.—There were 41 publications against 42 and 46 in the two preceding years.

The most important of these were-

Language.

- " Chandrálokálankar Samákhyá," a commentary on the Chandraloka figure of speech,
- " Káshika Vyákhya Pada Manjari," a commentary on the grammatical work, Káshiká.

Philosophy (including Mental and Moral).

- "The Vedant Kalpataru of Amalananda" and "Vedant Parimal of Appa Dikshit," being works on Vedanta Philosophy forming parts of the Vizianagram series, and edited by Pandit Ram Shastri Tailang of the Benares Sanskrit College.
- "Kárikavali Siddhant Mukhtavali-cha," containing Karikavali with its commentary Mukhtavali, as also the glosses known as "Ram Rudri" and "Shiva Rudri."

The slight decrease was due to a fall in the number of publications on Language and Miscellaneous. Publications on Philosophy and Law, however, showed an increase.

Works in the Arabic language.—There were 32 publications against 48 and 21 in the two preceding years.

. The following were the most important of these works :-

Language.

" Majmua-i-Hashia-i-Maulana Abdul Ghafur, Hashia-i-Maulana Abdul Hakim, Hashia-i-Nur Muhammad Mudaqqiq, Takallum-i-Maulana Abdul Hakim, Hal-i-Abiyat Sharah Mulla," treating of Syntax.

Law.

" Alnisfus-ul-sani Minal Fatavi-ul-Alam-giria," containing the second half of the fatwas of Alamgir (Aurangzeb.)

Religion.

- " Sharah-ul-Wiqaya Mai Hashiyal Undut-ur-riyayah," a commentary on Wiqayah with marginal notes.
- " Tubriat-ul-Islám un Shewul Ummat wil-ghulam," being an account of the deliverance of Islám from disgrace and slavery, compiled by Sir Syed Ahmad Khan, K.C.S.I., of Aligarh.

The decrease was due to a fall in the number of publications on Medicine, Poetry, Philosophy, Religion, and Miscellaneous.

Works in the Persian language.—There were 71 publications against 48 and 44 in the two preceding years. The main increase was in works under Language, Miscellaneous, Poetry, and Religion.

Of these the following works were the more important :---

Biography.

- " Tajkira-i-Ulama-i-Hind" giving an account of the learned men of India.
 - History and Geography.
- " Hamla-i-Haidari," giving an account of the incursion of Ali.

Language.

" Afiya Sharah-i-Shafiya," treating of nahw portion of Grammar.

Medicine.

" Tibb-i-Akbar," treating of medicine.

Poetry.

"Yusuf Zulaikha," a version of the love affair between Joseph and Zulaikha.

Religion.

"Shri Bhagwat Gita-ji-ka-tarjuma Farsi Faizi," a translation by Faizi of Bhagwat-Gita.

Polyglot works.—There were 200 publications against 156 and 141 in the two preceding years.

Of these the following were the most important:-

Biography.

" Siwanah-i-Umri Rája Siva Prasad Sitâra-i-Hind," în English and Urdu ;. a biography of the late Raja Siva Prasad, C.S.I., of Benares.

Language.

"Sundari Sudhār," in Sanskrit and Hindi, containing lessons and advice to women. "Chānakya niti darpan," in Sanskrit and Hindi, containing the moral precepts of Chanakya, with their renderings in Hindi.

Lanu.

"Manava Dharma Shastram" in Sanskirit and Hindi, a Hindi translation; with text of the Code of Manu.

Miscellaneous.

Grammar of the Rámáyan in English and Hindi, being a help to the reader of Tulsi Das' Rámáyana.

Medicine.

"Ayurveda Shaharnava," in Sanskrit and Hindi, being a glossary of the words occurring in the medical work entitled "Ayurveda." "Bhava Prakash Purva Khand Satik," in Sanskrit and Hindi a commentary in Hindi on "Bhaba Prakash Purva Khand." "Nafisi mae Hashia-i-Maulana Abdul Halim" in Arabic and Persian containing Nafisi with marginal notes in Persian by Maulana Abdul Halim.

Philosophy (including Mental and Moral).

- "Yoga Darshan" in Sanskrit and Hindi, a commentary on the Yoga system of Philosophy.
- "A Lecture on Vedant Philosophy" in English and Sanskrit, a lecture on Vedant Philosophy, delivered by Bábu M. L. Bhattacharya, M.A., Professor, Agra College.
- " Taittiriyopanishad Bhashyan" in Sanskrit and Hindi, a commentary in Hindi on Taittiriya Upanishad.

Religion.

- " Adhyatma Ramayan Satik" in Sanskrit and Hindi, a commentary in Hindi on Adhyatma Ramayan.
- "Quranmajid Mutarjam" in Arabic and Urdu. "Quranmajid Mutarjam," in Arabic and Urdu and "Quranmajid Mutarajjma" in Arabic and Urdu, commentaries in Urdu on the Qoran.
 - " Taisir-ul-Qari" in Arabic and Persian, being a help to the reader of the Qoran.
- "Futuhat-i-Islam" in Arabic and Urdu, giving a description of the victories of Mulammadanism.
- "Haqiqat-ul-izdiwaj-fi' abahat-ul-azwaz," in Arabic and Urdu, proving the legality of having four wives.
- "Tahqiq-ul-millat-ala-innal Islam-olaisa-dúnil-fitrat" in Arabic and Urdu, proving the conformity of the Muhammadan religion with the laws of nature.

There was an increase in the works on Biography, Language, Medicine, Miscellaneous, and Religion; while the works on Arts, Fiction, History, Geography, Law, Poetry, Politics, Philosophy, and Science (Natural and others) showed a decrease.

The following new periodicals were started during the year:-

English.

The Káyastha, edited by Avadha Behari Lal, a quarterly organ of the Káyastha Clubs Association, India.

*Urdu.**

- " Shula-i-Ishq" a periodical containing love poems.
- " Taswir," a novelistic monthly journal.
- " Taswir-i-Sakhun," a monthly journal containing love poems.
- " Nasím-i-Chaman," a monthly journal containing love poems.
- " Akhtar-i-Sihat-almaruf-ba-Aina-Sihat," a periodical dealing with sanitation.

Hindi.

- "Allopathic Doctori," a medical journal edited by Jagannath Sharma, Raj Vaidya, of Allahabad. Polyglot.
- " Aina-i-Tandurusti," in English, Urdu, and Hindi, a monthly journal edited by Jagannath Sharma, Raj Vaidya, of Allahabad.
- "Aryavarta Tatwa Varidhi" in Sanskrit and Hindi, a monthly journal edited by Govind Chandra Mittra, and devoted to different subjects, such as religion, history, drama, philosophy, &c.

(b)—The Vernacular Press.

The following statement gives details of those vernacular newspapers published in Upper India, excluding the Panjab, which were reported on during the year:—

I.—Statement showing the number of vernacular newspapers published and reported on in 1895.

Province.	Mouthlies,	Bi-montulies.	Tri-montblies.	Weeklies.	Bi-wecklies.	Dailies,	Total.	Number of newspapers started during 1895.	Number of newspapers stopped during 1895.	Number of newspapers that remained on the register at the end of the year.
·North-Western Provinces and Oudh.	39	12	ρ	54	1	2	117	21	21	96

Total	30	12	.9	57	2	2	121	21	25	96

From the end of August 1895 the Government Reporter on the Vernacular Press has, with the sanction of the Government of India, been relieved of the duty of reporting on the vernacular newspapers published in the Central Provinces and Rájputána. For the future he will only report on the papers published in the North-Western Provinces and Oudh.

One hundred and twenty-one papers were reported on as compared with 119 in the previous year. Of these, 117 were published in the North-Western Provinces and Oudh, two in the Central Provinces, and two in Rajputana. One hundred and one newspapers remained on the register at the close of 1894. Omitting the papers published in the Central Provinces and Rajputana, which were discontinued from September 1895, there were 117 papers (including 21 newly started) reported on in 1895. The publication of 21 papers ceased during that year, leaving 96 papers on the register at the close of the year. Among the older papers, the publication of the following was stopped during the year:-The Akhtar-i-Hind, which treated on religious matters and published general information gleaned from other papers; the Árya Samáchár, an Arya Samáj journal; the Hardil Azíz, which published poems and consisted almost entirely of extracts from other papers and local news; the Indian Reformer, an occasionally abusive print; the Intisar-ush-Sharia, which dealt chiefly with matters concerning the Shia religion; the Jubilee Paper, which criticised Government measures in moderate language; the Káyasth Samachar, devoted to social improvement among the Káyasth community, which was incorporated with the Kúyasth Conference Guzette of Cawnporc; the Máthur Vaishya Sukhdáyak, the advocate of social reform among Mathur Banias; the Mazaq, a comic paper, not always free from the taint of obscenity; the Najm-ul-Hind (Jaunpur), which was restarted in 1894 and is hostile to the Congress movement; the Rafi-ul-Akhbar, a small ordinary paper, temperate in tone; the Rahnumá-i-Chungi, which published municipal matters concerning the public; the Tohfa-i-Qádiri, a compendium of general information; the Urdu Akhbar, anti-Hindu in tone and an advocate of the claims of Muhammadans in respect of religious ceremonies, processions, &c., which was incorporated with the Rohilkhand Gazette; the Vigya Brindaban, which dealt chiefly with religious and social matters; and the Zamanah (Agra), which was incorporated with the Agra Akhbar, having been started in opposition to the Tahzib-ul-Akhlaq, which was owned by Sir Saiyid Ahmad Khan, K.C.S.I., and contained his views on social reform of Muhammadans. Among the entirely new papers started during the

INSTRUCTION. 189

year, the Ain-ul-Akhbar, the Gulzár-i-Hind, and the Shula-i-Túr were discontinued after a short existence. Among the others may be mentioned the following:-The Bhárat Bhúshan, which publishes local news and municipal affairs; the Chaturvedi Patriká, which deals with the caste affairs of the Chaturvedi community; the Dilsoz, a journal of fiction and history; the Din Bandhu, the organ of the orthodox Hindu community and a warm supporter of cow-protection; the Faryúd-i-Hind, which criticises the doings of Government officials and cases pending in the courts; the Jain Gazette, which advocates social reforms among the Jain sect; the Kurmi Samáchár, devoted chicfly to the encouragement of social reforms among the Kurmis; the Muragga-i-Alam, which publishes stories and novels; the Nigamagam Patrika, containing articles on social, moral and religious subjects; the Ratnákar, a magazine treating of different subjects, such as the treatment of diseases, condemnation of the use of intoxicating drugs, &c.; the Rohilkhand Gazette, which is really the same paper as the Urdu Akhbar mentioned before, the name having been changed in July 1895, and is given to exaggeration, and is markedly hostile to the police; the Sálitya Saroj, which criticises Government measures adversely!; and the Sulahkul, which advocates the maintenance of friendly relationship and intercourse among the several communi-The other new papers contain ordinary news, and deal generally with local matters. The National Congress movement finds hearty supporters in the Arya Darpan, the Cawnpore Gazette, the Hindustán, the Hindustání, the Khichrí Samáchár, the Najm-ul-Hind, (Saháranpur), the Nasím-i-Hind, and the Tohfa-i-Hind. The Nagri Nirad is a strong supporter of the cow-protection societies. The Rahbar continues its offensive tone and its opposition to the constituted authorities. Most of the other papers are published in the interests of some particular sect or society.

The Bhárat Jiwan has the largest circulation (1,500). Next come the Káyasth conference Gazette (1,200), the Kurmi Samáchár Patriká, and Nigamágam Patriká (1,000 each), the Vaishya Hitkárí (850); and the Alwaqt, the Colonel, the Jain Gazette, the Jain Hitoptleshak, the Ját Samáchár, the Káyasth Conference Prakásh, the Khattrí Hitkárí, the Muraqqa-i-Alam, the Oudh Akhbár, and the Vernacular Advertiser, with a circulation of between 500 and 600 each.

The following table shows the linguistic classification of the papers which were reported on:—

77 - Linguistic classification	of vernacular newspapers reported	on during 1895.

I.—POLITICAL AND FOREIGN.

The progress of the General Election in Great Britain was keenly watched by the Native Press. The *Hindustan* was grieved at the defeat of the Liberals, as, in its opinion, they were the true friends of India, and it expressed the opinion that the new Ministry, which was composed of Conservatives and Liberal Unionists, stood on slippery ground, as the members held divergent views on some important principles.

The Nyáya Sudhá thought that, as far as India was concerned, it did not matter much whether the Conservatives or Liberals were in power. While the two parties were opposed to each other on many questions, they seldom differed in matters affecting India, and no improvement in the condition of this country could be expected until a powerful Indian Committee was formed in Parliament.

Several articles appeared in the newspapers commenting on the position of Turkey with reference to the Christian Powers in connection with the massacres in Armenia. Some papers advocated that England should not desert Turkey, but help her to place matters on a satisfactory footing and to carry out needful reforms, great stress being laid on the fact that Musalmans in India formed a large proportion of the population subject to British rule. The Hamid-ul-Akhbar stigmatized the Christian subjects of Turkey as very wicked people, who were always ready to bring false charges against the Turks, incite rebellion, and then appeal to the Christian Powers of Europe for aid. The Najm-ul-Akhbar went so far as to declare that the Christian Powers of Europe secretly instigated the Christian subjects of the Sultan to revolt, and that when His Majesty suppressed the rebellion, they clamoured loudly, in the name of humanity, against the atrocities of the Porte.

The Bhárat Jiwan published the substance of the proceedings of the tenth Congress held at Madras, under the presidency of Mr. Alfred Webb, who had come from England to take part in its deliberations. The Hindustání was jubilant at the great enthusiasm which prevailed among the Madrasis on the occasion, and the Nagri Nirad expressed the opinion that it was the duty of the people to ventilate their grievances in a constitutional manner, and not to lament over them silently in their houses.

The Press generally took little notice of the Congress proceedings, although some papers did not hesitate to criticise in strong terms the attitude of the Muhammadans, under the advice of Sir Saiyid Ahmad, in keeping aloof from this political agitation.

The principal event in the history of Afghanistan was the visit made to Europe by Shahzada Nasr-ullah, son of the Amir of Kabul. The Hindustan called attention to the cordial welcome accorded to the Shahzada by the English people, and observed that the visit would give him an idea of the strength and civilization of the English nation, so that when he ascended the throne of Kabul the knowledge he had acquired in England of the British constitution would be very useful to him. The Press as a body, however, protested against India being saddled with the cost of the visit, the Subodh Sindhu suggesting that the money might have been more usefully expended in mitigating the distress of the famine-stricken people in India.

Articles on maladministration in Native States appeared in the Press. The States specially singled out for mention were Hyderabad, Indore, Bhopal, and Jodhpur. The Government of India were taken to task for permitting Political Officers to ill-treat Native Chiefs, the deposition of the Mahárája of Bhartpur being instanced as a case in point, where the Government, instead of making inquiry into the allegations preferred against the Mahárája or calling upon him for an explanation passed orders ex parte. The Nawáb of Rámpur, in the North-Western Provinces, was censured for not administering his State properly, and warned that, if he did not mend, he would share the fate of other Chiefs who had been deprived of power by the British Government.

In commenting on the poverty of India, the Rahbar suggested that it was due to the costly system of British administration, and that a large saving in expenditure would result from the more extended employment of Natives, thus fulfilling to the letter the Queen's Proclamation of 1858. The Bhárat Jiwan assigned as the principal causes of the poverty of the country the extravagant salaries paid to Anglo-Indian officers, and the unsatisfactory condition of the Indian treasury; but race feeling prevented the Government from making any reductions. The Alwaqt, on the other hand, in a long article, referred to the various blessings which the British Government had conferred on India, and remarked that the ease and comfort which the Indians at present enjoyed were the lot of hardly any other nation on the face of the earth; indeed, their condition was far better than that of many a self-governing nation. But as the English belonged to the ruling race, it was not possible for them to forget their position and treat the natives on terms of familiarity or equality. According

INSTRUCTION. 191

to the *Hindi* Pradip, the unpopularity of British rule in India was due to the heavy drain of wealth which was rapidly impoverishing the country.

Several papers commented in strong terms on the alleged ill-treatment of natives by Europeans. The Faryád-i-Hind complained that, far from any kindness and favour being shown to Indians, they were being most unjustly and spitefully dealt with by the ruling classes; that the people were naturally much discontented in consequence, as they regarded Englishmen as enemies rather than friends.

II.—GENERAL ADMINISTRATION.

It was remarked by the Riáz-ul-Akhbár that the congress had long been urging the necessity for the separation of the judicial and executive functions of District Officers, and several high authorities had expressed themselves in favour of this measure, but that the Government of India had declined to give effect to the proposal for want of funds. As, however, the Government was a great lover of justice, this much needed administrative reform would be introduced in one century or another. In commenting upon the ruinous cost of litigation, the Tohfa-i-Hind observed that justice ought to be as cheap as possible, in order that it might be within the reach of As matters stood, the poorer classes were to all practical intents and purposes excluded from the benefits of courts. The Dabir-i-Hind, in a long article contrasting the administration of India under the British Crown with that under the former native rule, asserted that in the time of the Hindu. and Muhammadan Kings justice was never sold, as is now done by the British Government; that is, no court fees were ever levied before in the country. A suitor or complainant was afforded every facility to get access to the authorities and obtain justice gratis. The present complicated and protracted form of judicial administration was expensive and ruinous to the people, and should be modified.

Several papers, in noticing the acquittal of Europeans charged with criminal offences against natives criticised in strong terms the failure of justice in mixed cases, and declared that such occurrences must of necessity bring the British rule into contempt.

The usual comments were made by the Press on the incapacity, corruptness, and highlandedness of the police The Bundelkhand Punch complained of the tyranny exercised by the police; of their using torture for the purpose of extorting confession of guilt from innocent persons; of their levying blackmail from bad characters and allowing them to prey upon peaceful subjects. Several reforms were suggested with a view of remedying the existing state of things, and, among other proposals, that of improving the pay and prospects of the members of the force so as to place them above temptation was commended to the attention of the Government.

The Tariff Act Amendment and Cotton Duties Bill was discussed by every section of the Press. The Rahbar, in referring to the history of the revival of the cotton import duty and the imposition of an excise duty on yarns manufactured in the Indian mills, remarked that the Indians were perfectly justified in alleging that their country was governed for the benefit of the Manchester weavers and the Anglo-Indian officers. In the cpinion of the Subodh Sindhu, the Government of India were guilty of gross injustice in imposing an excise duty in utter disregard of the protest of the non-official members of the Legislative Council, the Indian mill-owners, and the general public; and the Council had deliberately injured the Indian cotton industry and shown their weakness in meekly carrying out the orders of the Secretary of State, which had been issued simply with a view to please the Manchester cotton lords. The Bharat Jiwan observed that as the Lancashire weavers possessed great influence in Parliament, the latter, which was the arbiter of the destinies of India, had to yield their to wishes. The Hindustani wrote in the same strain, remarking that it was apparent to the people of this country that the Government could wage war against frontier tribes at a heavy expense to the treasury, and yet were not strong enough to ignore the clamours of the Lancashire weavers. The same paper, in an article headed "Surrender of Conscience," criticised the principle alleged to have been laid down by the Viceroy that all the members of the Imperial Legislative Council were

in duty bound to accept the views of the Secretary of State, whether they agreed with them or not, he being the authoritative interpreter of the decisions of the British Parliament in all matters concerning India. This in short amounted to carrying out legislation in accordance with the mandates of Parliament.

The Bundelkhand Punch expressed satisfaction at the appointment and composition of the Royal Commission to enquire into Indian expenditure, and suggested that representative witnesses from each and every province should be allowed to lay their views on Indian finance before the Commission.

In an article published in the Nagri Nirad, the present condition of the people was compared with that at the time of Muhammadan supremacy. Their decline was attributed to the adoption by them of the extravagant habits of Europeans, scarcity of food, want of employment, the growth of poverty, the custom of early marriage, ruinous litigation, and the falling off of Indian industries owing to European competition. It was suggested that Indian Princes, instead of living in luxury, should show their enterprise by devoting their resources to the development of cotton and other industries, check the drain of wealth from the country, and display more sympathy with their poorer countrymen.

According to the Kumáún Samáchár Patrika, the poverty of the people was due to the fact that the Sovereign of India resided beyond the seas. Were she to live in this country, most of the money which was annually sent to England would remain here and benefit the people. Several other papers commented on the condition of the agricultural classes, which had become unsatisfactory owing to several causes, such as rack-renting, enhancement of the revenue at settlement, scarcity of cattle, fodder, and manure, want of wells and tanks for irrigation purposes, and delay in the grant of advances: and Government was invited to adopt some effectual measures for the amelioration of the lot of the agriculturists.

Numerous complaints were made against the local administration of municipalities. The Kashsháf commented on the alleged needlessness of the projected waterworks at Meerut, specially when the natural supply of water was quite plentiful. It remarked that the people were already groaning under the load of various taxes levied from them, and were now to be subjected to a heavy outlay on the construction of water-works, which were not required; and that the action of Government in forcing such schemes on the people was sure to give rise to much discontent and disaffection, which should be avoided. Criticisms on the high incidence of municipal taxation in these provinces appeared in several papers.

The Press generally criticised with some severity the great increase made in the admission and tuitional fees of the various educational institutions. The Anjuman-i-Hind, in noticing the wide range of subjects prescribed for the several examinations, the high prices charged for text books, and the constant changes made in them, observed that the Government apparently intended by these means to quietly change its previous policy of giving free play to popular education in the country. Its object hitherto had been to make the people literate and civilized, but the present policy of rendering education costly must frustrate that object, and confine the benefits of education to the wealthy.

Similar articles appeared in the Almora Akhbár and the Zamánah. The latter paper was of opinion that the people themselves were to blame for not taking steps to start technical colleges and schools, although it was the duty of Government to provide for the general wants of the people. The Oudh Punch went so far as to remark that the raising of the college fees was the outcome of the idea prevalent among English officers that high education turned the heads of the natives and made them claim equality with their rulers.

III.—LEGISLATION.

Hostile criticisms appeared in the Press on the proposed legislation for the amendment of the Police Act, the Subodh Sindhu remarking that the passing of the measure in utter disregard of the protests of the Indian public showed clearly what respect the Government had for Indian public opinion. The Azad observed that the

INSTRUCTION. 193

new law would give unduly increased powers to the executive, and enable District Magistrates to inflict punishments against which there would be no appeal.

In the opinion of the *Hindustání* there was no other department with which the people were more dissatisfied than the police, and that, if the Government had sympathy with its subjects, it would not be so unwise as to increase the powers of the police in putting down religious riots and thereby cause still greater disaffection among the people.

The Hindustán and Hindustání expressed approval of the Bill introduced into the Imperial Legislative Council by the Hon'ble Babu Mohini Mohun Roy for regulating the award of interest in suits for simple money debts and mortgage debts. It was necessary to check by legislation the high rates of interest which the cultivators and other men of small means had to pay to the village Shylocks.

The Tohfa-i-Hind, on the other hand opposed the Bill on the ground that if passed it would only aggravate the evil it was intended to remedy, it would be a signal for creditors to sue for recovery of their debts, and necessitate debtors incurring large loans from others to pay off the old creditors, or to renew the bonds held by the latter which would be for the amount including principal and interest up to date. Moreover, creditors would be subjected to injustice, inasmuch as the law would also affect advances already made. It was suggested that, with a view to the protection of the people from the extortions of usurers, a Bill should be passed embodying the following principles:—(1) a maximum rate of interest should be fixed; (2) compound interest should not be reckoned; and (3) the period for institution of a suit for recovery of a mortgage debt from the date of the bond should be reduced to six years, and that for a simple money debt to three years.

The Pilgrim Ships Bill introduced in the Imperial Legislative Council was opposed generally by the Muhammadan section of the Press, on the ground that it would not only prevent a large number of poor Muhammadans from fulfilling a religious duty by performing the pilgrimage to Meeca, but would cause serious injury to native ship-owners in Bombay; that the inevitable result of the Bill would be to prevent Muhammadans from using native ships for their pilgrimage, and place them at the mercy of English ship-owners, who not only charge higher rates, but treat the pilgrims with severity.

The Press generally was hostile in its criticisms of the Bill to amend the law relating to legal practitioners, being of opinion that it would injure the interests of the already poor and struggling practitioners, and place them in the power of District Judges and Commissioners.

The Akhbar-i-Alam suggested that legislation should be undertaken with a view to preventing brokers from thrusting their services on customers and taking excessive brokerage on the purchases made in the larger towns.

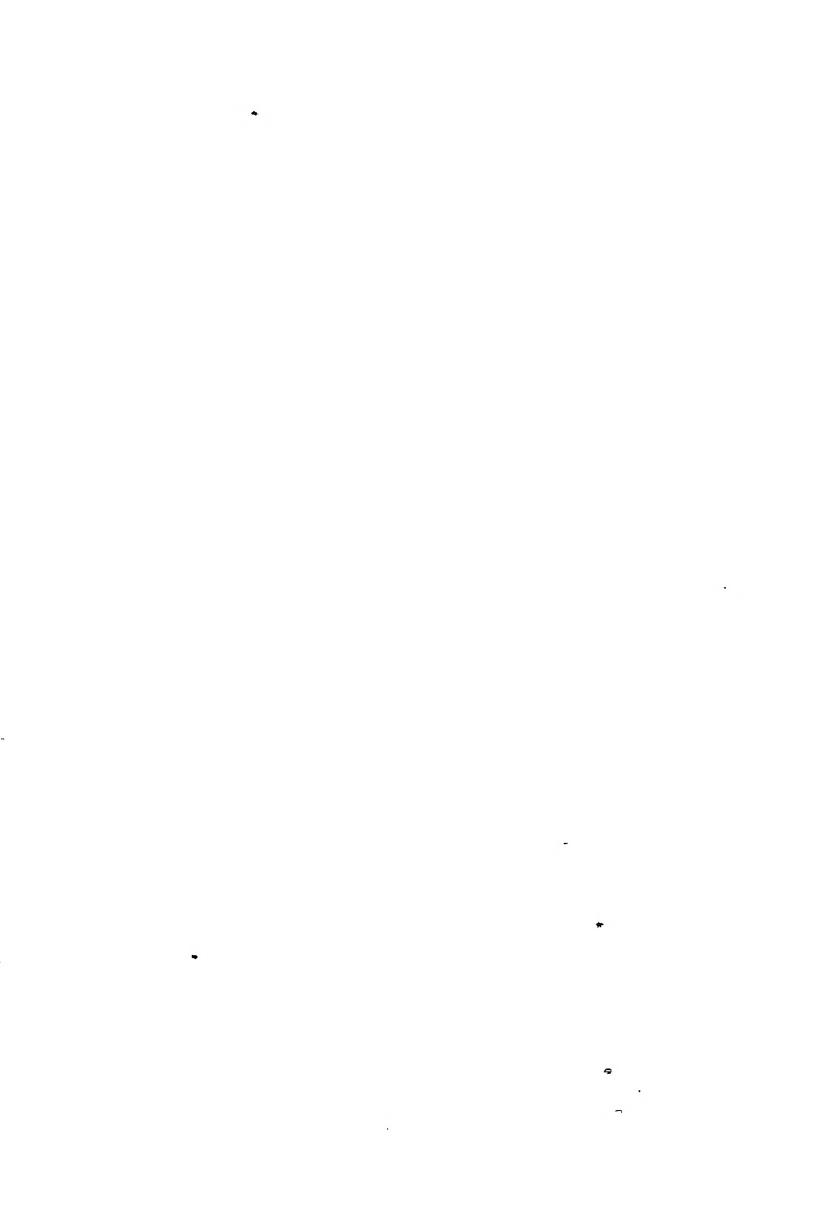

IV.—MISCELLANEOUS.

The shortcomings of railway administration were freely criticised by the Press. The usual complaints were made of native passengers being subjected to much vexation and extortion at railway stations, to overcrowding in carriages, to inconvenience in the matter of latrines and urinals, and to difficulty in obtaining water at stations, &c.; and surprise was expressed that nothing was done to improve matters considering that native passengers contributed so largely to the railway revenues. The Kashshaf mentioned that abstractions from consignments were freely made by the employés in the railway godowns at almost all railway stations, and that appeal to the authorities was attended with no result.

CHAPTER VIII.

ARCHÆOLOGY.

Epigraphical Section.

During the cold weather of 1895-96, Dr. Führer, the Archæological Surveyor, resumed his explorations at Mathurâ, where he spent a small sum partly on prospecting operations in the large Katra mound, which is said to conceal the ruins of Kesava Deva's ancient temple, destroyed by Aurangzeb in A. D. 1669, and partly on excavation in some unexplored portions of the Kankâli Tilâ, which mound some years ago had yielded the collection of important Jaina sculptures and inscriptions, on which a detailed monograph, illustrated by 103 plates, is now in the press.

The Katra mound furnished none of the hoped-for Bráhmanical sculptures and inscriptions, but only fragments belonging to a Buddhist Stûpa built by the Kushana King Vâsushka in Samvat 76. But the results of Dr. Führer's work in the Kankâli Tîlâ were as valuable as those of 1889-1891. Besides a large number of sculptures, nearly all of great finish and artistic merit, belonging to the Jaina Stûpa excavated in 1891, he obtained about 15 inscribed stones, giving several new names of Jaina schools and teachers, not met with in the previously discovered inscriptions. The most important find, however, is a long inscription on the base of a standing life-size image of Arhat Mähavîra, or Vardhamâna, the 24th Tîrthamkara of the Jainas.

Architectural Section.

Part II of Mr. Edmund W. Smith's report on the Moghul Architecture of Fatehpur-Sîkrî was passed through the press, and all the material for Part III of the volume was sent to the press for publication. Part II treats of the residence Rája Birbal erected for his daughter, and Jodh Bai's palace, the largest building, with the exception of the Great Masjid, in the city. Part III deals with Salîm Chishti's shrine, Islâm Khân's tomb, the baths and the buildings on the west of Akbar's capital.

All the illustrations for Mr. Smith's report on the "Colour Decoration of Agra" were completed and the letter-press nearly so. The volume will be illustrated by eighty or ninety plates, most of which are coloured.

Several illustrations of archæological details, with descriptions, were contributed to the *Technical Art Series*, a Government publication issuing from the Surveyor General's Office, Calcutta. A monograph on the decorative paintings in Itimâd-ud-daulah's tomb, Agra, also appeared in the July number of the *Journal of Indian Art*, published by Messrs. Griggs and Son of London.

In January sanction was accorded by Government to the publication, in the form of a portfolio, of a selection of the Fathpur-Sîkrî drawings. The work is now in hand and will be published in the course of the year.

A number of drawings have been prepared of the ancient sculptures excavated at Mathura and Ahichhatra, the modern Ramnagar.

CHAPTER IX.

MISCELLANEOUS.

1.—Ecclesiastical Jurisdiction.

(For standard section, see page 315 of the Administration Report for 1892-93.)

2.—Ecclesiastical. 3—Stationery.

(For standard sections, see page 199 of the Administration Report for 1874-75.)

4.—WARDS' INSTITUTION.

(See Court of Wards.)

5.—GOVERNMENT PRESS.

The actual receipts and payments on account of the Government Press during the year amounted to Rs. 64,458 and Rs. 3,41,360 respectively. The receipts exceeded the estimate by Rs. 7,458, while the expenditure was Rs. 440 less than the estimate.

In the following table the receipts and expenditure, under the major heads of the year under report, are compared with those of 1894-95:—

Receipte	r .		Charges.				
1. Opening balance 2. For printing work done payment 3. Miscellaneous	1894-95. Rs. 740	1895-36. Rs. 30 46,529 17,899	1. Salaries— (a) Permanent establishment (b) Temporary establishment Total 2. Piece-work 3. Overtime allowances 4. Other ditto 5. Contingencies 6. Private presses	1894-95. Rs. 1,22,249 5,773 1,28,022 24,635 19,057 6,593 42,804 68,169	1895-96. Rg. 1,19,403 14,521 1,33,924 24,979 13,791 5,560 34,892 66,252		
			7. Purchase of raw material, 8. Purchase of dead stock	59,421 50,893	43,893 18,070		
GRAND TOTAL	66,658	64,458	GRAND TOTAL	*3,99,594	3,41,361		

^{*} The difference between these figures and those shown in the report for last year is due to adjustments made after the closing of the accounts for 1894-95 in the office of the Press.

The decrease amounting to Rs. 58,233 in the above charges was chiefly owing to smaller purchases of machinery. In addition to these charges a considerable expenditure was incurred in the purchase of stationery and other raw material supplied from the Central Stores for the use of the Press, the cost of which was adjusted by book debit. These charges amounted to Rs. 2,69,513 as against Rs. 1,34,720 in the previous year: and the gross charges were thus increased from Rs. 5,34,314 in the previous year to Rs. 6,10,874, the highest figure which has yet been reached.

The total value of the work executed by the Press increased from Rs. 6,61,684 to Rs. 6,96,679, and the profit on the working of the Press was Rs. 1,03,316 as compared with Rs. 84,321 in the previous year. The calculated profit is the largest ever made: in no previous year, except in the two immediately preceding and in 1891-92, has it approached one-half of the above amount.

Of receipts for work done on payment, Rs. 3,359 were received on account of private work undertaken for Government officials, Rs. 38,836 for work of a public character arranged for at the request of Government officers for persons or bodies not entitled to the gratuitous services of the Press, and Rs. 3,677 for school examination papers: Rs. 612 were credited by other Governments. The miscellaneous receipts consist generally of subscriptions to the Government Gazette and sale of books, forms, and other publications. Of the total receipts, Rs. 48,146 were paid into the treasury in cash and Rs. 16,312 were adjusted by book transfer.

The Naini Jail Press worked well during the year; and notwithstanding the high charge made for convict labour, there was a calculated profit of Rs. 6,709 on its working, which was credited to the account of the Government Press.

The receipts from the sale of village maps amounted to Rs. 865 only, and there was a balance of \$15,015 maps on hand on the 31st March 1896. This large stock will be reduced by the transfer of the maps of certain districts to the Collectorates concerned, where there is more likelihood of their being sold.

PART III.—APPENDICES.

INDEX TO THE APPENDICES

TO THE

N.-W. P. AND OUDH ADMINISTRATION REPORT, 1895-96.

I -STATISTICS OF PHYSICAL POLITICAL, AND FISCAL GEOGRAPHY.

A.—I'HYNCAL GEOGRAPHY,	PAGES.

Sometime of Americ Sangle in the Irorup-Western Ironinges and Ouch.	Remarks.	· 🖺	refred Subordinate Judge. Captain J. R. C. Colvin, formerly Governor to the Nawah, was appointed Resident Political Officer at Ranpur. The income for 1894-45 (the report R. 8. 31,73,889 and 199 goldmohars, and the expenditure Rs. 26,27,664. The capital, and a kind of damask are the principal exportiture Rs. 26,27,664. The capital, and a kind of damask are the principal exports, and the imports consist mining of lephants, Buglish cloth, groceries, and sait. A military force of 24,48 men of all arms the conditiug the Imperial Service troops) and 60 police sawars was manhained during	The Min of Benares is a descendant of Raja Balwant Singh, father of Raja Chet Singh, who was deposed by Warren Hastings in 1781. The Pamily Domains of the Maharija of Renares consist of the parganas of Kaswar Raja in the Benares district and Kera Mangraur and Bhadohi in the Mirzanur district. Their united area is 983°8 square niles, containing 1,766 villages, with a population of 439,851 and an average renard	monted deputy principal officers. The procedure is that of Act XII of 1881, supplemented where necessary by the Civil Procedure Gode. In 1861 the Governor-General mented where necessary by the Civil Procedure Gode. In 1861 the Governor-General his race. The Family Domains have been especially exempted from the custom of of Act III of 1878 (the Local Rates Act). The Malardia succeeded his mele, Sir Ishramale Narryam Singh, Bahádur, G.C.S. I., on the 18th June 1889.  male mader the regency of the mother of the 18th June 1889.  Intervas installed as ruler of the State. The area of Tehri 18 4,180 square miles, the population is 241,242, and the income from all sources was Is. 2,17,889 in 1895-96, and the expenditure Ra. 2,40,490. The Righs of Tehri pay no tribute, but are required to give free passage to British subjects pussing through their territories and in case of duction is grain. No manes are worked,
